Education

Florida Atlantic University
Bachelor of Science in Computer Science

December 2024

Professional Experience

IT Systems Analyst, Octdaily

Jan 2025 - Present

- Collaborated with cross-functional teams—including front-end and back-end developers, QA teams, and healthcare clients—to gather, document, and analyze business requirements from a genetic testing lab, forwarding them into clear technical specifications and system design documents aligned with healthcare compliance.
- Played a key role in designing and implementing a Laboratory Information System (LIS) with RESTful APIs, ensuring scalable, compliant, and efficient lab operations.
- Developed and maintained over 100 Jira user stories and tasks, supporting efficient project tracking and alignment across development and QA teams.
- Delivered targeted training sessions to laboratory staff and clinic administrators, enhancing system adoption and reducing user-reported issues by 45% post-deployment.
- Developed and executed comprehensive QA test plans for production deployments, ensuring high-quality deliverables and system reliability.
- Contributed to system architecture design for sample and patient data management, enabling seamless integration with existing lab systems and workflows.
- Created system documentation and technical guidelines using Confluence, reducing new team member onboarding time by 40% and providing reference materials for ongoing user training.
- Actively participated in post-implementation reviews and identified continuous improvement opportunities for system enhancements and workflow optimizations.

Systems Analyst Associate, Octdaily

Oct 2024 - Jan 2025

- Supported the development of a Laboratory Information System (LIS) by assisting in gathering and documenting technical requirements from healthcare clients.
- Collaborated with front-end and back-end developers to understand system workflows and contributed to aligning software features with lab operations.
- Assisted in writing user stories and organizing tasks using Jira to help streamline sprint planning and communication across the development and QA teams.
- Participated in QA testing for system deployments by running test cases, reporting bugs, and verifying fixes to ensure stable releases.
- Helped design solutions for managing sample and patient data, focusing on data structure, flow, and integration with existing lab processes.
- Developed a foundational understanding of cloud-based healthcare integrations, focusing on automation, security, and compliance best practices.

Personal Projects

Technical Documenter, Capstone Project.

October 2023 – May 2024

W.A.A.D.R. (Wearable Accessibility Aid for Diver Rendezvous)

- Led and coordinated a team of 4 and documented the fundamental part of the W.A.A.D.R. system, the core subsystem and
- Spearheaded documentation efforts for the project's core subsystem, translating technical designs, software logic, and hardware integration processes into clear, structured documents.
- Spearheaded documentation efforts for the project's **core subsystem**, translating technical designs, software logic, and hardware integration processes into clear, structured documents.
