

VANAJA SHALINI KATTUPALLI | Java Full Stack Developer

IN | (219) 298-7662 | kv.shalini28@gmail.com | [LinkedIn](#)

SUMMARY

Results-driven Java Developer with 3+ years of experience in designing and developing cloud-native microservices and enterprise applications in the healthcare and financial sectors. Expertise in Spring Boot, Kubernetes, Docker, AWS, RESTful & GraphQL APIs, Apache Kafka, and CI/CD pipelines. Skilled in AI integration, real-time data streaming, security compliance (OAuth2, JWT, HIPAA), and performance optimization. Strong background in modernizing legacy applications, enhancing system scalability and reliability, and ensuring seamless data interoperability with FHIR APIs and HL7 standards. A collaborative team player who works cross-functionally with DevOps, Data, and Security teams to drive innovation and deliver high-performance, future-ready applications.

SKILLS

Languages:	Java, SQL, HTML, JavaScript, CSS
Database:	MySQL, PostgreSQL, Oracle, MongoDB, SQL Server, Data Modeling
Frameworks:	Spring Boot 3, React, Quarkus, Hibernate ORM, Spring Integration, Spring Security, Vert.x, Node.js, Express
Cloud Technologies:	AWS
Microservices & APIs:	Microservices architecture, RESTful APIs, GraphQL APIs, FHIR APIs, SMART on FHIR
Container Deployment:	CI/CD, Docker, Kubernetes, Helm
Security:	OAuth2, JWT
DevOps & CI/CD:	Jenkins, GitHub Actions, Git
Data Technologies:	Apache Kafka, Redis, SQL, NoSQL
Testing:	JUnit, Mockito, Test Coverage
Real-Time Processing:	Project Loom, Non-blocking I/O
Data Interoperability:	FHIR APIs, HL7 Standards
Performance Optimization:	JVM Tuning, Redis Caching, Query Optimization
AI & Machine Learning:	TensorFlow
Development Methodologies:	Agile, Code Reviews, Refactoring

WORK EXPERIENCE

Java Full Stack Developer | Elevance Health, IN

Jul 2024 – Current

- Build and enhance cloud-native microservices using Spring Boot 3, Kubernetes, and Docker, ensuring that our healthcare applications run smoothly, scale effortlessly, and stay available 99.9% of the time for patients and providers.
- Protect sensitive patient data by implementing OAuth2, JWT authentication, and Spring Security, ensuring our applications comply with HIPAA regulations while keeping health information safe from unauthorized access.
- Developed and optimized JavaScript-based web applications, ensuring efficient DOM manipulation, event handling, and asynchronous operations to enhance application performance and responsiveness.
- Modernize legacy applications by breaking down monolithic systems into lightweight microservices using Quarkus and GraalVM, reducing memory consumption by 30%, improving response times, and making healthcare data more accessible.
- Developed and maintained highly interactive, responsive, and user-friendly web applications using React, ensuring optimal performance and seamless navigation for healthcare platforms and enterprise applications.
- Diagnosed and resolved UI-related issues by debugging Redux store actions, optimizing API calls, and improving component re-rendering efficiency to enhance user experience.
- Develop real-time data streaming solutions using Apache Kafka and Project Loom, ensuring patient records and insurance claims sync instantly across hospitals, pharmacies, and providers—because timely data can make all the difference in healthcare.
- Optimize system performance and reliability by fine-tuning JVM, implementing Redis caching, and using non-blocking I/O frameworks like Vert.x, reducing wait times for critical transactions and ensuring a smooth user experience for healthcare professionals.
- Designed and structured efficient MongoDB databases by implementing optimal schema models and indexing strategies, reducing query execution times for large datasets.
- Optimized and enhanced real-time data processing by implementing WebSockets and event-driven architectures in Node.js, improving live data synchronization across healthcare applications.
- Improve healthcare data interoperability by integrating HL7 standards, and SMART on FHIR protocols, making it easier for different healthcare systems to communicate and share patient information securely and efficiently.
- Automate deployments and ensure system stability by collaborating with DevOps teams to implement CI/CD pipelines using Jenkins, GitHub Actions, and Helm charts, allowing us to release updates quickly without disrupting essential healthcare services.
- Developed and maintained RESTful and GraphQL APIs using Express.js, enabling efficient data exchange between frontend applications and backend services.
- Stay ahead of the curve by embracing modern Java features from Project Amber, serverless computing with AWS Lambda, and emerging industry trends, ensuring we always build future-ready, scalable healthcare applications.

Java Full Stack Developer / Systems Engineer | Goldman Sachs, India

Jan 2019 – Jul 2022

- Developed and optimized enterprise applications using Spring Boot and RESTful APIs to improve data retrieval and processing speeds, resulting in a 20% increase in processing efficiency, enhancing financial services across investment banking and asset management.

- Refactored and modernized existing React codebases by leveraging hooks, functional components, and lazy loading, improving maintainability and reducing load times.
- Implemented and optimized state management using Redux, ensuring data consistency across complex applications while improving reusability and scalability.
- Enhanced and secured JavaScript applications by implementing client-side validation, preventing cross-site scripting (XSS) and other security vulnerabilities.
- Developed and fine-tuned complex aggregation pipelines in MongoDB to support advanced analytics and reporting, enabling data-driven decision-making.
- Implemented structured logging and error-handling mechanisms in Express.js, ensuring better debugging, monitoring, and resilience against application failures.
- Collaborated with cross-functional teams to design and implement automated tests with JUnit and Mockito, achieving 85% test coverage, and reducing defects in high-frequency trading systems by 15%.
- Integrated and managed external APIs, third-party services, and microservices using Node.js to streamline data exchange between different platforms, ensuring seamless communication across enterprise applications.
- Implemented microservices architecture with Docker and Kubernetes to modernize legacy systems in risk management, improving scalability and reducing downtime during updates.
- Integrated third-party financial services, such as market data feeds and payment gateways using Spring Integration, automating transaction workflows and reducing time-to-market for financial products.
- Optimized database performance for financial reporting systems using Hibernate ORM and SQL, improving query performance and supporting real-time analytics for portfolio management.
- Utilized Git for version control, managing multiple development streams and collaborating globally, ensuring smooth feature integration and reducing merge conflicts.
- Enhanced CI/CD pipeline with Jenkins, automating build and deployment processes to reduce errors and accelerate production updates in trading platforms.
- Created and maintained API documentation using Swagger, providing clear guidelines that streamlined developer onboarding and enabled faster deployment across financial platforms.

EDUCATION

Masters in Computer Science

Purdue University Northwest, IN

May 2024

Bachelors in Engineering

Vignan's Lara Institute of Technology and Science, India

May 2019
