

SHASHAANK ANDUGULA

Boston, MA | +1-857-385-9557 | shash7719@gmail.com | [LinkedIn](#)

Innovative Software Engineer

Skilled IT professional transitioning from software development to data analysis. Experienced in leveraging SQL, data visualization tools, and analytical techniques to drive actionable insights and process improvements. Demonstrated success in enhancing customer satisfaction and system reliability through data-driven projects. Eager to contribute strong analytical skills and technical expertise to support data integrity and informed business decisions.

Areas of Knowledge & Skills

- **Programming Languages:** Python, C, C++, Java, PHP, Perl, R
- **Development Tools & Platforms:** SQL, HTML, CSS, JavaScript, XML, Ubuntu, Ubuntu Server, Debian Linux, Windows 10, iOS, Mac OS, Android, Visual Studio, Console/Terminal, Git, Google Collaboratory, Jupyter Notebooks, Microsoft Power Automate, AWS, Google Cloud, Microsoft Azure, Tableau, Power BI, Excel, Microsoft Teams, Zoom
- **Methodologies & Specialized Skills:** Software development, Database Management, Cloud computing & Virtualization, Data Analysis & Visualization, Networking & Cybersecurity, Software design patterns, User Interface design, Team Engagement & Leadership, Documentation & Reporting, Technical Support, agile/scrum environment, remote teams coordination, automated test tools, cross-platform technologies, Data Manipulation

Professional Experience

Bright Mind Enrichment

2024 - Present

Software Developer

United States

- Analyzed and aligned design strategies with business goals, incorporating dashboard and spreadsheet analysis to achieve a 20% increase in customer satisfaction.
- Developed and unit tested web design features, enhancing overall design efficiency by 10% and utilizing automated test tools.
- Provided ongoing technical support for website updates and maintenance, emphasizing data integrity and reducing issue resolution time by 25%.

Cognizant Technology Solutions

2021 - 2022

Software Developer

India

- Managed and mentored a sub-team of 20 interns, enhancing productivity by 20% through regular meetings, effective task delegation, and thorough code reviews.
- Contributed actively to the complete software development lifecycle of IoT solutions, applying data-driven approaches and basic SQL query techniques to improve project delivery times by 15%.
- Achieved stage-wise coding milestones by leveraging strong programming skills and implementing rigorous quality controls to result in a 10% increase in code reliability and data validation.

Tevatron Technologies Pvt. Ltd

2018 - 2020

Software Project Engineer

India

- Created comprehensive technical documentation and data process guides for developed solutions, facilitating a 25% reduction in maintenance time and future enhancements.
- Designed and implemented IoT solutions using Arduino IDE, Cayenne MQTT, and Amazon Web Services, while analyzing performance data to guide a 20% enhancement in device performance and operational efficiency.
- Directed the setup and configuration of IoT devices, ensuring real-time smart functionality by monitoring data flows and applying robust programming practices to maintain data integrity and system reliability, improving overall performance by 15%.
- Accelerated IoT project delivery speed by 25% through the strategic use of Mongoose OS and .NET.

Education & Credentials

University of Massachusetts Boston

2024

Master of Science, Computer Science

Geethanjali College of Engineering and Technology (GCET)

2022

Bachelor of Technology, Computer Science Engineering

Key Academic Projects

Developing a parametric design tool for LTA vehicles

Adaptive concepts LLC Pvt Ltd corp.

- Built real-time design dashboard using Python, Streamlit, HTML/CSS for LTA vehicle simulations
- Integrated Excel for parameter handling, calculations, and hermetic design validation
- Designed intuitive UI to visualize design changes based on user input
- Conducted testing and incorporated feedback from engineers to refine tool accuracy

Cogniverse – Internal Learning Portal

- Built full-stack app for knowledge management using Java, Spring Boot, React, and MySQL
- Integrated PDF.js, Video.js for in-browser file previews; dockerized services for Jenkins CI/CD
- Reduced new hire onboarding time by 30%; deployed in UAT and Production environments

ParseIQ – Resume Parser API

- Developed NLP-based resume parser with FastAPI, spaCy, and MongoDB; achieved 87% extraction accuracy
- Used pdfminer and Tesseract OCR for scanned/digital PDF parsing; normalized skills using fuzzy logic
- Built exportable API with JSON/CSV outputs and frontend demo in Streamlit
- Deployed on AWS EC2 and Heroku with Docker-enabled CI/CD
