EXPERIENCE

Software Development Engineer, FinPay, United States

Jun 2024 - Jun 2025

- **Automated E-signature Workflow** : Integrated DocuSign with **Node.js** and **webhooks**, automating fixed-template workflows for **120,000** documents. Reduced document processing time by **25%**.
- **Backend Migration & Optimization**: Migrated **15 Spring Boot APIs** to [Node.js](#), strategically replacing 25 legacy endpoints. Reduced API count by **40%** and cut **AWS service calls by 30%**, projected to save **\$50,000 annually**.
- **Secure Payment Gateway** : Built a secure payment gateway API using Node.js and **RESTful APIs**, leveraging **Stripe** for payment processing. Designed a **PostgreSQL** schema for encrypted ID storage, easing future vendor transitions
- **Testing & Stability Assurance** : Integrated automated test suites (**JUnit, Jest**) into **CI/CD pipelines** for a microservices platform, ensuring high reliability and enabling continuous delivery.

Software Development Engineer, Juspay, India

Jun 2021 – Aug 2023

- **Unified Payments Interface Platform & Refund Optimization** : Redesigned the refund API with a ID-based flow, reducing verification steps by **35**. This solution now handles **300,000 refunds** daily and is live in production.
- Leveraged RESTful APIs and **microservices** architecture to ensure seamless integration with NPCI's government provided APIs, achieving **99.99% uptime** and compliance with industry standards.
- Implemented distributed caching and asynchronous processing to handle **124,000,000** daily transactions, improving system scalability and reducing latency by **25%**
- **Deemed Transaction API Development (Amazon)** : Architected and developed a highly reliable API to handle deemed transactions improving successful transaction completions by **16%**
- Integrated with banking systems to fetch real-time transaction data, reducing latency by 20% and ensuring accurate status updates.
- Designed a robust error-handling mechanism and asynchronous response management system, achieving **99.5% reliability** in transaction processing and reducing customer support queries by 30%

Team Lead - Virtusa Hackathon

May 2021 - Jun 2021

- Led a **cross-functional** team of 5 to design and develop a full-stack e-commerce web application using **React JS**, **Spring Boot**, and **Axios**. We implemented **JWT** for secure, token-based authentication, enabling distinct and controlled access for both user and admin interfaces.
- Engineered user-centric features including account creation, product browsing, and cart management. We used **Asynchronous Services** for real-time email and SMS confirmations to enhance user engagement.
- Designed and implemented an intuitive admin portal for sellers to manage product listings and analytics. We automated our build and deployment processes using **CI/CD pipelines** and containerized services with **Docker** to ensure a smooth, end-to-end delivery cycle.
- Optimized application performance by **reducing page load times by 30%** through **efficient API design** and **caching mechanisms**, ensuring a seamless user experience even during high traffic.

SKILLS

Languages & Core Technologies: Java, JavaScript (ES6+), TypeScript, Python, Node.js, React.js, Spring Boot, Express.js, RESTful APIs, WebGL, Redux, Material-UI, HTML, CSS, Hibernate/JPA, Flask

Cloud, Containers & Databases: AWS, Azure Cloud Technologies, Docker, Kubernetes, Microservices Architecture, PostgreSQL, MySQL, MongoDB, SQL, DynamoDB, Redis, GCP

Testing, DevOps & Tools: Git, GitHub, JGit, Jenkins CI/CD, Automated Testing, Selenium, Jest, JUnit, Cypress, Mockito, React Testing, Splunk, AWS Lambda, DynamoDB, S3, API Testing Tools, Build Systems, NPM, Visual Studio Code

Methodologies & Systems: Agile, SCRUM, SDLC (Software Development Life Cycle), Object-Oriented Analysis/Design (OOA/OOD/OOP), Kafka, Asynchronous Request Handling, High Availability Solutions, System Monitoring, Linux/Unix Administration, Data Modeling

EDUCATION

Drexel University

Philadelphia, PA

Master of Science in Computer Science

Sep 2023 - Sep 2025

Jawaharlal Nehru Technological University (JNTU)

Hyderabad, India

Bachelors of Technology in Computer Science

Jul 2018 – Jun 2022

Relevant Coursework : Advanced Data Structures through Java, Web Application Development. RESTful API Design, Software Engineering, Data Structures & Algorithms, Operating Systems, User Interfaces, Advanced Database Management, Software Project Management, Requirements Engineering
