

SUMMARY

- Experienced Data Engineer with over 5 years in designing data pipelines and Lakehouse architecture using Databricks, Spark, and AWS(2x certified). Specializes in building resilient workflows, implementing governance frameworks, and supporting ML training datasets.
- Deliver data-driven product insights by building scalable data pipelines and interactive dashboards using SQL, Airflow, Python & dbt.
- Lead cross-functional collaboration with engineering, product, and analytics teams to develop automated KPIs, reporting systems, and experimentation frameworks that enhance decision-making and user experience.

EXPERIENCE

Senior Data Engineer

Shoptaki

July 2025 – Present

New York, USA

- Built and optimized a financial data lakehouse on Databricks, streamlining ingestion and curation of trading and payments data, cutting redundant storage by 40% and boosting cost efficiency for compliance and risk reporting.
- Engineered scalable batch and near real-time pipelines using Apache Spark and Airflow to process high-volume transactions, improving data freshness SLAs by 50% and enabling faster fraud detection and credit-risk modeling.
- Implemented automated data validation and anomaly detection frameworks, reducing reconciliation and reporting errors by 30% while strengthening the reliability of regulatory submissions and AI-driven financial insights.

Data Engineer

Katz School of Science and Health

Aug 2024 – May 2025

New York, USA

- Reduced response time by 20% and achieved an 9/10 user satisfaction score by analyzing and resolving 300+ technical tickets in ServiceNow and developing Power BI dashboards using Azure-hosted PostgreSQL data to uncover performance and support trends.
- Developed an AI-driven Career support system using RAG with OpenAI GPT-3.5, integrating structured data pipelines and validation rules to deliver accurate, context-aware responses, automating 40% of queries and improving user engagement(View).
- Built a centralized Azure data warehouse integrating 12+ data sources, powering 15 Power BI dashboards on PostgreSQL for student 360° view and cut manual reporting by 30%. Led a 12-member team; Project won 1st prize at Katz Research Presentation for Best Data Warehouse(view).

DevOps Engineer

Bizcloud Experts

Sep 2022 – Dec 2023

Hyderabad, India

- Designed and deployed cloud infrastructure for 3 U.S. retail and logistics clients(Nieman Marcus, Omni logistics, AMS) using AWS, Docker, Jenkins, and Terraform, ensuring high availability, scalability, and secure application delivery.
- Migrated 30+ repositories from on-premises to AWS, implementing Jenkins CI/CD pipelines that accelerated deployments and strengthened security across staging and production environments.
- Collaborated on building a field booking and live sports streaming application(Fields Manager), integrating real-time data pipelines for advertisements and live scores to enhance user engagement and analytics capabilities.

Data Analyst

Max Healthcare

Feb 2020 – Sep 2022

Hyderabad, India

- Engineered and maintained 30+ ETL workflows integrating MySQL into Amazon Redshift on AWS, reducing processing time by 35% while ensuring data integrity, lineage, and accuracy for downstream analytics and ML pipelines.
- Developed 30+ self-serve Tableau dashboards to automate KPI tracking for finance and clinical teams, eliminating 60% of manual Excel reporting and enabling data-driven decision-making.
- Normalized and transformed 2M+ patient records into Redshift tables, applying data quality checks and schema best practices to support advanced analytics and performance at scale.

EDUCATION

Yeshiva University

Master's in Data Analytics and Visualization

Jan 2024 - May 2025

New York, USA

International Institute of Information Technology - Bangalore

Executive Post Graduation in Data Science

Sep 2022 - Oct 2023

Bangalore, India

TECHNICAL SKILLS

Programming: Python, JavaScript, SQL

Web: Figma, HTML, Tailwind CSS, REST API

DevOps: Terraform, Docker, Kubernetes, Jenkins, Git, Bitbucket

Relevant Tools/Skills: Databricks, Apache Spark, AWS, data warehouses, data Lakehouse, data annotation platforms, Airflow, dbt, CI/CD, SQL, data quality, data governance, dimensional modeling, schema design, batch processing, streaming data, anomaly detection, ML, data catalogs, observability, data validation, cloud cost optimization.

Cloud Technologies: AWS, Azure

BI Tools: Power BI, Tableau

Database: PGSQL, MySQL, Oracle, Snowflake

CERTIFICATIONS

- AWS: AWS Data Engineer Associate Certification (Dec 2024) | AWS Solution Architect Associate Certification (Jan 2023).
- Microsoft Power BI Data Analyst (August 2024) | Professional Data Engineer in Python – Data Camp (Nov 2024).
