EDUCATION:

Master of Science in Computer Science | Syracuse University

GPA: 3.63 / 4

Bachelor of Engineering in Computer Engineering | Gujarat Technological University

GPA: 9.11 / 10

SKILLS:

Programming Languages: Java, Python, JavaScript, HTML5, CSS3
Frameworks: React, Spring, Spring Boot, PyQt, Bootstrap, REST, SOAP, Django, Apache Beam, Airflow, Pandas
Databases: MySQL, PostgreSQL, MongoDB, TeraData, Oracle, SQL Server, Apache, BigQuery
Tools & IDEs: Git, Informatica, Visual Studio, MS Office, Postman, RabbitMQ, GitHub Actions, Jenkins, Terraform, Docker
Operating System: Linux, Windows (7/8/10), Mac OS
Miscellaneous: AWS, Excel, GCP, Azure, PySpark, XML, Numpy, Dataflows, Looker, CSV, GPT, PowerBI, Airflow, Tableau, Gemini, Google Ads

WORK EXPERIENCE:

AI/ML Engineer (Contract) | Apple (via Worldscape)

Mar 2024 - Present

- Developed and deployed client onboarding UIs to streamline integration with cutting-edge ML technologies, resulting in a 20% faster onboarding process for enterprise clients.
- Designed and maintained APIs to access machine learning tools, improving internal team access to performance and metric monitoring by 30%, ensuring real-time insights for system optimization.
- Built scalable backend services and frontend UIs supporting cross-functional machine learning projects, contributing to 40% performance improvements in enterprise ML workflows.
- Led cross-functional collaboration with machine learning engineers and scientists to deliver enterprise-ready ML solutions, increasing system performance and scalability by 25%.
- Automated system validation and testing procedures, reducing error rates in new system implementations by 15%, improving system reliability, and cutting down manual intervention.
- Created a GenAI-based virtual SRE co-pilot using Causal Discovery and internal foundation models to detect and resolve system wide anomalies which increased developer productivity by 35% and decreased overall system risk by 27%.

Software Engineer, Data | Jun Group | New York, NY

Jan 2023 - Feb 2024

- Developed ETL processes with Python, Dataflows (Java), Airflow, dbt, PostgreSQL & BigQuery, Oracle Data Warehouse improving data handling for 50+ monthly ad campaigns, boosting report efficiency by 30%.
- Developed and optimized batch processing jobs in Python & AWS, improving ad segment processing time by 40%, and integrating results into the SDK for enhanced user targeting and ad analysis.
- Identified and reported business impacts of integrating PreBid and OpenRTB in the Jun Group SDK along with product managers to ensure optimal use of high volume ad inventory of 250k units.
- Wrote Data Transfer & ETL Jobs in Cloud Dataflow to migrate customer & ad segment data from Teradata to BigQuery in order to improve scalability and cost effectiveness of reporting by 15%.
- Utilized Experian datasets stored in AWS S3 & RedShift to process large datasets using Python, Apache Spark, NumPy for handling over 10 TB of data weekly.
- Used Google, Meta & Snap Ads Python APIs to create a data infrastructure pipeline which gave operations team insights about campaigns and improved pacing process by 43%.
- Executed Data & ML workflow with Python API of AppTopia, boosting campaign effectiveness by 25% and targeted engagement by 20%.
- Built custom data visualizations via PowerBI, LookerStudio & Tableau, speeding up decision-making by 20% for campaigns and offered KPIs regarding the campaigns and ads powered by Google & Meta Ads API.
- Implemented custom URL categorization system using GenAI tools such as GPT in order to provide best offers for a campaign and reduce categorization time from 4 hours to 1 hour.

Full Stack Data Engineer | The New York Times | New York, NY

Nov 2021 - Jan 2023

- Integrated ML Algorithms such as LSA and Interest based Targeting to improve ad performance analytics on scale.
- Developed a complex React application for media partners to create, launch, and pace NYT campaigns across multiple social media platforms, resulting in 3-4 hours saved daily for the marketing strategy team and increased campaign launches.
- Implemented PySpark logic in existing streaming pipelines to handle large volumes of data coming in from various Ad platforms connected to NYT campaigns reducing reporting latency for operations teams by 29%.
- Maintained Data Pipelines using Python, Java, BigQuery, Airflow And AWS Glue in order to ensure seamless data flow across multiple platforms..
- Used Tabelu, Looker and PowerBI to create custom reports for the marketing analysis team improving their efficiency by 34%.
- Developed and Maintained a React-Flask (Python) Application for Media Innovations team which helped them create ad copies and campaigns improving campaign creation process by 34%.
- Utilized Pandas for cleaning, aggregating, and analyzing large datasets from multiple ad platforms, combined with NumPy for efficient numerical computations, resulting in a 29% reduction in reporting latency for real-time campaign performance insights.

Software Engineer II | Paychex Inc. | Rochester, NY

July 2021 - Nov 2021

- Developed Time and Attendance Services using React and C# and Java targeting over 10 million small to medium scale businesses.
- Implemented comprehensive unit and integration tests using Jest and React Testing Library, achieving 90% test coverage
- Integrated Google Analytics to build a smarter business solutions roadmap for Paychex Flex and Stratustime portal and help Product Operations improve their decision strategy.
- Designed test plans to build a strong foundation of Paychex Flex UI across multiple browsers and mobile OS using JavaScript
- Devised multiple services and test support plans for simplifying Payroll, Attendance, etc. for 700,000+ clients.
- Used PowerBI to provide insights for user journey and user behavior on Paychex Flex and Paychex Startus time to improve product reliability by 21%.
- Integrated Spring Boot microservices to streamline payroll and attendance solutions for 700,000+ clients, resulting in a 25% increase in processing efficiency.

Software Engineering Intern | TruWeather Solutions | Syracuse, NY

Nov 2019 - Sept 2020

- Built and managed APIs using Sails.js framework to deliver weather data and to contribute in rapid operational weather planning.
- Integrated weather APIs in client system application performance by 50% to provide dynamic and real-time weather forecasts.
- Built and managed a user interface/portal for clients to view products, services, and their subsequent pricing plans.
