EXPERIENCE

Grad Intern, Regeneron	New Jersey, US May 2024 -August 2024
- Created a dynamic Power BI dashboard integrated with a PostgreSQL database on Amazon S3 for clinical trial management for Oncology study, enabling researchers and statisticians to efficiently compare clinical trial subject data, optimizing data validation processes. - Developed a Collibra-based pipeline to monitor data quality using SQL, now utilized company-wide to maintain high data standards and drive reliable decision-making.	
Data Engineer, A.P.Moller Maersk	Bengaluru, India June 2022 - June 2023
- Deployed a global container storage event simulator, identifying 1.4% of missed events across 33 terminals, influencing \$2M in revenue, and innovated a Container Movement Insight Dashboard to enhance load/discharge operations and contract negotiations using Python, SQL, Spark, Kafka for revised data accessibility. - Performed an automated validation framework in Azure Data Factory, increasing data integrity and efficiency, resulting in a 34% reduction in data processing time and 20% fewer data quality issues using Agile methodologies.	
Consultant, Deloitte	Bengaluru, India July 2021-May 2022
- Played key role in developing ETL pipeline system using Azure Data Factory and Databricks to analyze to track sales and revenue of Reckitt Benckiser products across multiple countries. Leveraged SQL, PySpark, Kafka, and Azure Data Lake, Blob Storage to streamline data processing, reducing latency for business stakeholders to make data-driven decisions on product performance. - Developed Power BI dashboards to assess customer loyalty and attrition trends for Reckitt Benckiser products. Integrated Azure Monitor and Log Analytics to create a comprehensive pipeline monitoring framework, enabling real-time tracking of ingestion throughput, transformation times, and error rates.	
Software Engineer, Mindtree	Hyderabad, India May 2020 July 2022
- Led transition of modules from GCP to Azure Data Lake Storage by creating ETL pipelines ensuring a seamless migration with Azure Data Factory, Synapse enhancing data reporting efficiency for 7-11, P&G. - Utilized Azure Cloud services, including Databricks and Azure Data Lake, to analyze client communication preferences across the US and Canada by engineering scalable ETL pipelines for development of targeted strategies to boost engagement rates and streamlining campaign performance analytics.	

PROJECTS

Generative AI for Protein Folding Prediction
- Integrated a Transformer-based model (similar to ChemBERTa) for toxicity prediction and ADMET (Absorption, Distribution, Metabolism, Excretion, Toxicity) analysis profiling for drug candidates. Optimized model performance using Google AutoML, reducing hyperparameter tuning time by 40% and improving predictive accuracy by 10% through cross-validation on large genomic dataset.
Personalized Health Monitoring and Anomaly Detection System
- Designed a Recurrent Neural Network (RNN) with LSTM layers for time-series analysis of health metrics. - Incorporated Autoencoders for anomaly detection and deployed models on AWS Lambda for cost-efficient and scalable inference, reducing deployment complexity by 20%.

TECHNICAL SKILLS

Programming Languages: R, Python, SQL, PySpark, Scala, JavaScript Big Data Technologies: Hadoop, Spark, Hive, Kafka, Kubernetes, HBase Cloud Platforms: AWS, Azure, GCP DevOps & Tools: Docker, Jenkins, Bitbucket, Git, AWS, CI/CD pipelines, PCF (Cloud Foundry), Weblogic, Apache Tomcat, SaaS, IaaS, PaaS Database Management: PostgreSQL, SQL Server, MongoDB, Snowflake, AWS S3, Dremio ETL & Data Pipeline Tools: Apache Airflow, Azure Data Factory, SSIS, Databricks, DBT, Google Analytics, AWS Glue, Talend Visualization Tools: Tableau, Power BI, Power Apps, Looker Analytics & AI Tools: Amazon SageMaker, Amazon Bedrock, MLflow, Microsoft Fabric, Microsoft Synapse, LLMs and LLMOps, Langchain, Pinecone, Gantry

EDUCATION

Syracuse University Master of Science in Applied Data Science GPA 3.7/4.0	August 2023-May 2025
--	----------------------

LEADERSHIP & COMMUNITY ENGAGEMENT

Lab Assistant, Syracuse University, New York	January 2024-Present
I am a Machine Learning Lab Technician, where my work focuses on exploring how organelles derived from stem cells respond to various substances, such as caffeine and ascorbic acid. Through predictive modeling, we aim to understand the cellular reactions and behavioral changes triggered by different concentrations, contributing to advancements in biological research and personalized medicine.
