EDUCATION

University of Southern California

Graduated: May, 2025

Master of Science in Computer Science (GPA: 3.7)

PROFESSIONAL EXPERIENCE

NBCUniversal, Los Angeles, California

June 2024 – August 2024

Software Engineer Intern

- Automated 20% of smoke test cases for NBCUniversal TV applications using Java and Selenium; projected to reduce overall smoke testing time by 60% upon full implementation.
- Worked on integrating automated tests into the Jenkins CI/CD pipeline, helping reduce manual effort and speeding up feedback loops.
- Secured 1st place in the Peacock Intern Innovation Challenge by designing a high-level prototype in Figma, applying user-centered design thinking to innovate on new content formats.

Dwarkadas J. Sanghvi College of Engineering

March 2022 – May 2022

Undergraduate Teaching Assistant

- Conducted 10+ hours of live sessions and hands-on workshops, delivering practical training on web technologies including React.js, Node.js, Bootstrap, and RESTful APIs to enhance students' real-world development skills.
- Assisted Professor to create study material and cheat sheets for the course and aided students with doubts and assignments.

Ergode Inc

April 2021 – July 2021

Full Stack Developer Intern

- Worked on a desktop application to automate the extraction of relevant information from PDF invoices using .NET application and uploaded it to the AWS database.
- Developed a web application to retrieve product details using RESTful APIs and SQL queries from partner databases, enabling users to download the data as a structured CSV file for business use.

ACADEMIC PROJECTS AND PUBLICATIONS

Drishti- Computer Navigation using Audio and Video Aid for Amputees and Parkinson's patients

- Led a team in developing and publishing the IEEE paper "Computer Navigation using Audio and Video Aid for Amputees and Parkinson's Patients" at the 2022 5th International Conference on Advances in Science and Technology (ICAST), presenting a novel HCI solution for motor-impaired users.
- Designed a low-cost, hardware-free assistive system using Python, Dlib, and Vosk APIs to enable real-time computer navigation via facial movement and voice commands; published findings in IEEE Xplore as first author.

Educational Game on Financial Literacy

- Led the development of an interactive online game to teach financial literacy to 6th–7th grade students, addressing gaps in the Indian school curriculum; collaborated with the Centre for Development of Advanced Computing (CDAC), Government of India for domain guidance.
- Built the application using React.js, Bootstrap, Node.js, and Google Firestore, ensuring compatibility by using ES6 (ECMAScript 2015) standards for broad browser support and seamless user experience.

Tug of Towers

- Led game balancing and analytics for *Tug of Towers*, a real-time multiplayer tower defense game built in Unity; developed C# scripts to log in-game events and transmit data to Google Sheets for analysis.
- Created a real-time dashboard in Google Sheets to visualize player behavior across seven playtests, enabling the team to make informed, data-driven decisions to refine mechanics and improve game balance.

TECHNICAL SKILLS

- Programming Languages:** C/C++, Javascript, Java, Python, C#
- Software Development:** React.js, Node.js, Express.js, HTML, CSS, Bootstrap, PHP, Django, Flask, Android Studio
- Database Technologies:** SQL, NoSQL, MongoDB, MySQL, GraphQL
- Cloud & DevOps:** AWS, Docker, Kubernetes, Heroku, Netlify
- Tools & Platforms:** Git, GitHub, Visual Studio Code, Unity
