SUMMARY:

4 Years of IT experience in System Analysis, Design, and Maintenance of projects in non-life insurance and financial domains to provide quality solutions to complex scenarios to meet the Architectural and Functional requirements.

- Experience in all phases of Software Development Life Cycle (**SDLC**).
- Experience in coordinating requirements and technical discussions between internal departments and vendor team for enhancement and maintenance activities.
- Experience in working with global teams in onsite/offshore model, handshake for requirements and validation of deliverables before sending to client team.
- Good understanding of Business workflow, Business logic and Business methods for further implementation of user requirement in a distributed application environment.
- Excellent communication, interpersonal and analytical skills and a highly motivated team player with the ability to work independently, adapt quickly to new technologies.

TECHNICAL SKILLS:

Programming Languages	Java,J2EE,Cobol, JCL
J2EE/JAVA Technologies	JDK 1.5/1.6, Servlets, JSP, EJB 2.0/3.0, JDBC, JMS, JSF, JNDI
Frameworks	Struts 1.1/2.0, Spring 2.0/2.5, Hibernate 3.x/2.x
IDE Tools	Eclipse 3.x,RAD
Database	Oracle 9i/10g, DB2, My SQL
Web Technologies	HTML, JavaScript, AJAX, DHTML, XML,SAX DOM,XSLT, CSS
Other Tools	Ant, Maven, Log4j, Sub version

PROFESSIONAL EXPERIENCE:

Employer: Infosys

Client: American Express(Amex), Salt Lake City, UT

Dec'15-Aug'16

Project: vPayment Legacy

Role: Technical lead

Description:

vPayment is a virtual payment pre-authorization system. It is an XML based service that is exposed to customers to allow them to set up a customized pre-authorized transaction against a virtual credit card. vPayment cards are electronic versions of payment cards and they are assigned to business units rather than individuals. Internal users also access vPayment for administrative and reporting functionalities.

Responsibilities:

- Involved in gathering business requirements finalizing the project scope discussion for the application.
- Onsite coordinator for development team of 8 developers in offshore (India).
- Worked in grooming stories in Scrum meeting.
- Coordinate with the team for managing deliverables.
- Track and communicate the project progress.
- Coordinated in procuring new WAS server from infrastructure team during WAS migration.
- Helped other team members in trouble shooting various issues in project.
- Created requirements, test plan and test lab in QC and created test report through the same.
- Used SVN as version control tool, Used Maven to build the application and deployed on WAS server.

Environment: JDK 1.5/1.6, Java, J2EE, JSP, Servlet, WAS Server, XML HTML, JavaScript, Hibernate, Struts2,, Multithreading, DB2, JDBC, Spring MVC, Spring AOP.

Employer: Syntel Inc

Client: Kemper Auto and Home Insurance, Jacksonville, FL

Sept '07 - Jan '11

Project: Right Price Web Application

Role: Analyst Programmer

Description:

Right Price Web is a Web-based Personal Lines Auto and Home Insurance Quoting and Purchase System leverages existing Rating Engine and Policy Issue system on the mainframe via Java front end. The new web-based application allows agents to access additional information from external resources to assist them in quoting and pricing insurance policies for their clients. In the Quoting Phase, only the details necessary to provide a base rate are collected. Further details are only requested if the customer is interested in purchasing a policy. The application supports Auto and Home Insurance Policies, as well as an 'umbrella' policy - which is a package offering both Auto and Home coverage.

Responsibilities:

- Involved in all the process of **SDLC** process; requirements gathering, analyzing the requirements, implementation, migrating the code, testing and documentation.
- Fixing the Issue Tickets raised by the Business Analyst on the Client Side via Alert Monitor Tool.
- Coding and unit testing for defects that require code changes and work on small enhancements using **Struts2** (effort hours less than 500).
- Extending the development support for different environment DEV, SYS, UAT and PROD.
- Exposure to certain Mainframe technologies (COBOL, JCL).
- Review SIT and UAT test cases along with business team and provide support for defects raised during SIT or UAT phase.
- Used **Alert Monitor** as bug tracking system for production defects.

Environment: JDK 1.4, Java, J2EE, JSP, Servlet, Tomcat Server, XML HTML, JavaScript, Hibernate, Struts2, JavaScript, Multithreading, DB2, JDBC, Alert Monitor.

EDUCATION:

Masters of science (M.S) in computer science (Virginia Commonwealth University, Richmond, VA), USA.

GPA: 3.5/4.0

Bachelor of Engineering (B.E) in Information & Technology from PT.Ravishankar University, Raipur, Chhattisgarh, India.

GPA: 8.1/10.0

PROFESSIONAL CERTIFICATIONS:

INS 21(Auto and home insurance domain) certification.
