Summary

12+ years of experience in developing & maintaining Web & Windows based applications using Microsoft Technologies with proficiency in multiple job roles, starting with analysis, design, development, implementation & maintenance support of business applications. Experience includes extensive hands on programming of in house developed software solutions using C#.NET, VB.NET, OutSystems, WinForms, ASP.Net, WEB API with .Net core, LINQ, WCF, MVC, HTML, XML, CSS, JavaScript, jQuery, VB6, Classic ASP, IIS, SQL Server, Oracle, AS400 & MS Access. Experience of working on SQL Server with writing the Stored Procedures, Cursors, Triggers and PL/SQL scripts for data migrations or similar. Also includes database design, SSIS development & reporting using SSRS.

Skills

- Web & Desktop Application Development
 - Performance Improvement
 - Design Patterns
 - Aesthetic UI Design
 - Mathematical Algorithms
 - Database Creation
 - Technical Specifications
 - Unit Testing
 - Mentoring
 - System Maintenance
 - Code Optimization
-

Technical Skills

- **Languages:** C#, C++, VB.NET, VB6, PHP and Java.
 - **Web:** HTML, Bootstrap, CSS, JavaScript, JQuery, AJAX, Servlets, JSP and JSTL.
 - **Web Service:** ASP.NET, WEB API, WCF and TypeScript.
 - **Web Server:** IIS, Tomcat and glassfish.
 - **Frameworks:** .NET, ASP.NET Forms, ASP.NET MVC, ADO .NET, OutSystems Platform, Entity Framework, LINQ, Angular JS and Angular 2, Entity Framework core, MS SQL (SSRS), NodeJS, Spring (MVC, Validation, Security, Data).
 - **Databases:** SQL Server, MS Access, MySQL, Oracle and AS400
 - **Design Patterns:** Singleton, Strategy, lazy loading, observer, Chain-of-responsibility.
 - **SDLC:** Waterfall and Agile.
 - **Tools:** Visual Studio .NET, Eclipse, UML, NetBeans, Dream weaver, phpDesigner, DLL, Crystal Reports, TFS and Azure.
 - **Platforms:** Windows and Linux.
-

Education

- Master of Science in Computer Science from Maharishi University of Management, Fairfield, Iowa, Oct-2017-Dec 2019
 - Pre-Master of Science in Computer Science from Cairo University, Cairo, Egypt, Sept-2013- May 2015
 - Post-Graduate Diploma in Computer Science from Institute of Statistical Studies & Research – Cairo University – Cairo, Egypt, Sept 2011- May 2013
 - Bachelor of Commerce in Accounting from Faculty of Commerce – Cairo University – Cairo, Egypt, Sept 2003 -May 2008
-

Experience

Coolsoft LLC, Louisville, Kentucky

Software Developer (March 2020 – Present)

- Provided consulting and application development services in IT.
- Managed full stack development and maintenance of complex systems both internal and client-facing, improving functionality and performance. Instructed junior programmers in C# practices.

Projects

- TTC (TDEC Training and Certification Application): Tennessee State Project that handles training, certifications and licensing for various programs. Used MVC, Entity Framework, JavaScript frameworks, Web API and Oracle.
- Supporting English Learners In Texas: Texas State project that supporting English Learner
- RISC (Rice Insurance Services Company): Kentucky State project that handles real estate E&O insurance, Used PHP larval, MySQL
- IJOS (Idaho Juvenile Offender System) : Idaho State Project to administer and enforce all provisions of the Idaho Real State License Law.

Responsibilities

- As part of a team analyses, implement, code, test, debug, document, maintain, and support computer programs, and enhancements of existing client/server and web-based applications using .NET technologies.
- Developed and maintained secure microservices using **.NET Core**, **C#**, and **ASP.NET Web API** hosted in **Azure App Services**.
- Integrated **Azure Key Vault** for secure management of secrets, keys, and credentials.
- Utilized **Azure Functions** for event-driven background processing and automation tasks.
- Employed **Azure Service Bus** for decoupled and scalable messaging between services.
- Designed and managed **Cosmos DB** for highly available and globally distributed NoSQL data storage.
- Configured **Azure API Management (APIM)** for managing external/internal APIs with throttling and authentication policies.
- Implemented **CI/CD pipelines** in **Azure DevOps** using **YAML pipelines**, incorporating stages for build, test, code quality checks (**SonarCloud**), and deployment.
- Used **Feature Management** in Azure App Configuration for controlled feature rollouts.
- Set up **Application Insights** and **Azure Monitor** for end-to-end observability, performance

- tracking, and alerting.
- Deployed containerized applications using **Docker** and **Azure Kubernetes Service (AKS)**.
- Conducted unit and integration testing with **xUnit**, **Jasmine**, and **Karma**; ensured code quality with **SonarCloud** and **code coverage tools**.
- Participated in **daily stand-ups**, **sprint planning**, and **release management** using **Azure Boards**.
- Participate in walkthroughs, technical design, code reviews, and testing of applications.
- Work with database administrators to implement database changes.
- Perform code reviews, testing, and debugging.
- Developed applications using the OutSystems PaaS cloud environment.
- Research problems and develop solutions to the problems. Work with the production support team to make sure that implemented applications works efficiently in production environment.

Technologies Used:

C#, WEB APIs with ASP .net core, Angular12, OutSystems, Oracle , LINQ, HTML5, Bootstrap, CSS, JavaScript, JQuery, AJAX, ASP.NET, MVC, ADO.NET , Entity Framework, LINQ, MS SQL, Crystal Reports, GIT. Embraco

12th Wonder (Honda Company), Dublin, CA

Software Developer (November 2018 – March 2020)

- A team of international technology problem solvers with a knack for automation and digitization. We develop custom software products
- Managed full stack development and maintenance of complex systems both internal and client-facing, improving functionality and performance. Instructed junior programmers in C# practices.

Projects

- Engine Portal is an application where different tests related to vehicle engine are tracked. Records like who will perform the test and what parts of vehicles are used and what is the result of test are all tracked.

Responsibilities

- Design, develop, test, support, deploy desktop, custom web, and mobile applications.
- Analysis customer software requirements and develop related software applications and programs.
- Research and evaluate software related technologies and products.
- Design and develop testing and maintenance procedures and activities.
- Develop and write high quality coding that meets customer requirements.
- Create software documentation and update existing documentation.
- Design, develop and implement critical applications in a .Net and Open Source environment.
- Assist and support other team members on multiple projects.
- Implement best practices, standards and procedures including quality and delivery methodologies.
- Ensure compliance with the documented software processes and procedures throughout the life cycle of software products

Technologies Used:

Suez Canal Insurance Company, Giza, Egypt

Software Engineer (Jun 2010 - Oct 2017)

- Migration of VB6 to C# Win Forms and web MVC .net
- Migration of VB.net Win Forms to C# Win Forms and web MVC .net
- Major insurance enterprise develops its in-house IT projects for the business operations. 3000+ employees and many end-users utilize this in house software implemented in 62 branches of the company.
- Managed full stack development and maintenance of complex systems both internal and client-facing, improving functionality and performance. Instructed junior programmers in C# practices.
- Drafted detailed technical specifications for features and systems.
- Designed and implemented databases with optimized structures and queries, using SQL server
- Created user-friendly interfaces.
- Provided testing and maintenance on existing systems.

Technologies Used:

C#, VB6, PHP, ASP.NET (Web Forms & MVC), Node.js, AngularJS, Angular 2, JavaScript, Typescript, HTML / HTML5, CSS, Bootstrap, AJAX, JQuery, ADO.NET, Entity Framework, LINQ, WCF ,Web API, DLL, SQL Server, MySQL, MS Access, SSRS, SSIS, SSAS, Crystal Reports, TFS

Projects

1. Automated Archive System

Archiving (EDMS) is the process of converting documents, paper documents to electronic documents by scanning through scanners and storage through storage media circulation. Archiving records management processes that insures protection, maintenance and accessibility and begins from the moment of creating the document and ends with destroyed or legacy is preserved forever. This project can be used as an automated process where the program does the documentation, or it can be intercepted by the user to overview the documentation or edit it manually

Responsibilities

- Effectively involved in various stages of development of the project starting from the project planning until production and maintenance using agile methodology.
- Worked with ASP.NET Web Forms, State Management, caching features, for optimization and configuration of the web application using C#. NET.
- Designed, developed and trouble-shoot the application using advanced Microsoft technologies such as ASP.NET MVC 5 with Entity Framework, JQuery, HTML5 Razor, XML, WCF, and CSS3 using Agile development practices.
- Used JSON to transmit data between Server and Web Application, an alternative to XML Serialization.

2. Health insurance System

Health insurance policies cover the cost of medical treatments. Like Dental insurance, medical insurance, protects policyholders for dental costs and other.

Responsibilities

- Created and consumed Web API Restful services to consume full Http features like URI's, request/response headers, caching, versioning and various content formats.
- Used Angular2 Factory, Services & Providers created for different modules of Users, Groups, and System & Entities.
- Solid experience in developing Single Page Applications (SPA) based on client-side JavaScript framework Angular2 for employing ASP.NET MVC and Web API.
- Wrote SQL queries with Joins on multiple tables, Stored Procedures, Functions, Triggers, Backup and Restore Database, define roles. Create database Involved in designing database, SQL queries optimization and performance.

3. Life insurance System

Life insurance provides a monetary benefit to a decedent's family or other designated beneficiary, and may specifically provide for income to an insured person's family, burial, funeral and other final expenses. Life insurance policies often allow the option of having the proceeds paid to the beneficiary either in a lump sum cash payment or an annuity.

Responsibilities

- Worked in Agile environment delivering functionality on time with quality as highest priority.
- Created and consumed Web API Restful services to consume full Http features like URI's, request/response headers, caching, versioning and various content formats.
- Designed the web UI using ASP.NET, HTML, DHTML, JQuery, Angular 2, JavaScript, JSON, CSS, XSL, Web Forms and AJAX controls. Strictly implemented mobile first approach and responsive web design.
- Development of UI mock-ups, prototypes and implement user interfaces for key components of the web application.
- Building common components using ASP.NET such as list of templates, list of work lists etc.
- Experience in Writing code and debugging skills with ASP.NET, WCF and Web services.
- Used JQuery for Client-Side Validations and AJAX calls to communicate with Controller Actions and Web API Services with JSON Data. Developed .Net core functionality with the ASP.NET MVC Framework.
- Created Database objects like Tables, Stored Procedures and Triggers in SQL Server 2014.
- Developed reports using BIDS, SSRS according to the input parameters required by the business.
- Provided estimates, daily & weekly status report to the client on progress of the tasks.
- Wrote SQL queries with Joins on multiple tables, Stored Procedures, Functions, Triggers, Backup and Restore Database, define roles. Create database Involved in designing database, SQL queries optimization and performance.

4. Vehicle insurance system

Project Description: Vehicle insurance system services cars, trucks, motorcycles and other road vehicles. Its primary use is to provide financial protection against physical damages or bodily injuries from traffic collisions. The specific terms of vehicle insurance vary with legal regulations in each region to lesser degree vehicle insurance besides that financial protection against theft of the vehicle and possibly damages of the vehicle such as damages colliding with stationary objects.

Responsibilities

- Effectively involved in various stages of development of the project starting from the project planning until production and maintenance using agile methodology.
- Worked with ASP.NET Web Forms, State Management, caching features, for optimization and configuration of the web application using C#.NET.
- Designed, developed and trouble-shot the application using advanced Microsoft technologies such as ASP.NET MVC with Entity Framework, JQuery, HTML, Razor, XML, WCF, and CSS using Agile development practices.
- Used JSON to transmit data between Server and Web Application, an alternative to XML Serialization.
- Used Angular JS Factory, Services & Providers created for different modules of Users, Groups, and System & Entities.
- Solid experience in developing Single Page Applications (SPA) based on client-side JavaScript framework Angular JS for employing ASP.NET MVC.
- Wrote SQL queries with Joins on multiple tables, Stored Procedures, Functions, Triggers, Backup and Restore Database, define roles. Create database Involved in designing database, SQL queries optimization and performance.
- Involved in full lifecycle of the project from design, development & Testing.

5. Financial system (Training in the position of Software engineer)

- Major insurance enterprise develops its in-house IT projects for the business operations. 3000+ employees and many end-users utilize this in house software implemented in 62 branches of the company.
- Worked in Agile environment delivering functionality on time with quality as highest priority, Wrote SQL queries with Joins on multiple tables.
- Stored Procedures, Functions, Triggers, Backup and Restore Database, define roles. Create database Involved in designing database.
- SQL queries optimization and performance.
- Used JQuery for Client-Side Validations and AJAX calls to communicate with Controller Actions and Web API Services with JSON Data.
- Responsible for on time/quality deliverables.
- **Project Description:** Financial system handles the storage, analysis, and management and processing of a set of financial transactions, records and processes. There are 52 WCF Rest Operations, which talks to SQL SERVER and Other web services to pull all the Promotional Data and stores in memory and serves to all Client.

Responsibilities

- Implementation of the projects & provide support.
- Unit and System Integration testing with external applications.
- Responsible for on time/quality deliverables
- Providing support for production go-live
- Analyzing and fixing the defects identified.
- Developed long running application using Threads
- Used Team foundation server as Source Repository
- Wrote Stored Procedures to pull Promotions from SQL Server.
- Wrote Singleton Pattern while designing Service.
- Wrote SQL queries with Joins on multiple tables, Stored Procedures, Functions, Triggers, Backup and Restore Database, define roles. Create database Involved in designing database, SQL queries optimization and performance.
- Used JQuery for Client-Side Validations and AJAX calls to communicate with Controller Actions. Developed .Net core functionality with the ASP.NET MVC Framework.
