

VIDUTHALA SHILPA

Dot Net Developer

E-mail: shilpa.viduthala@outlook.com

Contact: +1(848)-256-5202.

SUMMARY:

- **Around 4+ years** of extensive experience in various stand-alone, intranet, client-server and web-based software applications with all phases of **software development life cycle (SDLC)** like requirements gathering, analysis, design, development, testing and maintaining using Microsoft technologies.
- Extensive experience with various software methodologies like **Agile/Scrum, Waterfall, Test-Driven(TDD)** and **Domain-Driven**.
- Experience in designing and developing enterprise applications using **MVC (Model View Controller) architecture, N-tier, 3-Tier architecture**.
- Experience in migrating on-Premises applications to Azure cloud. Experienced in Provisioning VM's,
- Setting up Azure functions, logic apps. Experience in both IaaS and PaaS services.
- Experience Azure and minimal experience in AWS.
- Strong working Knowledge in **ASP.NET Core, Web API** and Entity framework Core, **ASP.NET Core MVC** such as **Models** and **Providers, Filters**.
- Expertise in **Angular 6/7** framework and its ability to create simple and scalable code.
- Strong experience with user interface web technologies like **HTML, CSS, jQuery, AJAX, JavaScript, VBScript, and Bootstrap** etc.
- Experience in developing applications using **Multi-Threading, Object Oriented Programming (OOP) and Service Oriented Architecture (SOA)**.
- Designed and implemented the application using **Microservice** Architecture for its various distinct advantages like loose coupling and design patterns.
- Experience in developing **Microservices** using **ASP.NET core**.
- Created and scheduled nightly batch jobs on **SQL Server 2005** to execute the **SSIS packages** and refresh the reporting data from the data sources.
- Extensive experience with working on all layers like presentation layer, business layer and data access layer using **ORM** technologies like **LINQ, Entity Framework, NHibernate**
- Experience in writing **Stored Procedures, Triggers, Views, DTS packages and SSIS packages on MS SQL Server 2018/2016/2012/2010/2008/2005**.
- Experience in designing complex reports including sub reports and formulas with complex logic using **SQL Reporting Services on SQL Server 2012/2010/2008**.
- Experience in developing Custom Reports and different types of Tabular, Ad-hoc and distributed reports in multiple formats using **Crystal Reports** and **SSRS**.
- Worked on database modeling, schemas and created **PL/SQL** statements, **T-SQL** statements, Stored Procedures, Triggers and Views in **SQL Server, Oracle**.
- Developed using **N-Tier Architecture, Multi-threading, Event handling and OOPS concepts** including Abstract classes-interfaces-inheritances.
- Expertise knowledge on **Object Oriented Programming** with **.NET** and **Design Patterns**.
- Good experience in designing **WCF Web Services** and **WPF** to build windows client applications.
- Experience in Version Management using **Visual Source Safe (VSS)** and **TFS, GIT**.

EDUCATION:

Master's in Computer Science

B.S.C(Computer Science)

TECHNICAL SKILLS:

Programming Languages	C#.Net, ASP.NET Core 2.0, ASP.NET Core WEB API, Entity Framework Core 2.0, VB.Net, C and PL/SQL.
Web Technologies:	ASP .Net 4.7/4.5/ 4.0/3.5/3.0, JavaScript, Angular JS, Angular 4/2, Bootstrap, jQuery Font. Awesome, Telerik UI, HTML, DHTML and CSS.
Databases:	SQL Server 2005/08/12/14, Oracle 9i/10g/11g, MS Access
Development Tools:	Visual Studio 2019/2017/2015/2012/2010, SQL Management Studio
Version Control:	GIT Hub, VSS, TFS2015/2010, Tortoise SVN,
Web Servers:	IIS 7.x/6.0
Cloud:	Azure Cloud Service
Methodologies:	SDLC, UML, OOAD (Object-Oriented analysis and design), Agile, Waterfall
Testing Tools:	Selenium, Jasmine, Quality center, Unit testing using N-Unit, MOQ, Fiddler, SoapUI.
Platforms:	Windows 10/7, UNIX, Linux.
Others:	MS Office, MS Visio, XML, XSLT, ODP .Net, Toad, SQL Profiler, SSRS, SSIS, SSMS

PROFESSIONAL EXPERIENCE:

Client: Kinder Morgan

Location: Houston, Texas

Aug 2023- Present

Role: .Net Developer

Description: Kinder Morgan is an energy company utilizing the master limited partnership (MLP) financial structure as a growth vehicle, something that had never been done before. KMI is now one of the largest energy infrastructure companies in North America. The company owns an interest in or operates approximately 82,000 miles of pipelines and 140 terminals and has approximately 11,000 employees across North America.

Responsibilities:

- Involved in development of the **Data access layer, business logic layer (Middle tier) and the User Interface (Front-end)**
- Developed Webpages by using **MVC5 Razor, HTML5, CSS3, JavaScript, jQuery & Knockout.js**.
- Created desktop application with **Angular 2/4** and Unit Test with Karma-Jasmine
- Incorporated many rich, user friendly, responsive features in the application using **jQuery, JavaScript, Angular JS, AJAX** scripting.
- Widely used **HTML5** and **CSS3** for creating user interfaces.
- Used **JavaScript** and **jQuery** as Client-side scripting languages.
- Developed REST/WCF Web services, ASP.NET WEB API's and involved in pre-testing.
- Created and scheduled batch jobs in sql server 2005 to execute the SSIS packages and refresh the reporting data from the data sources.
- Used Dependency injection for injecting various AngularJS, Angular2, Angular6 and Angular10 services to Angular Controllers. Also Implemented Angular Services to bind the data and provide access to the data on the server.
- Implemented WEB API services for CRUD operations with (SOAP and /or RESTFUL services) HTTP GET, POST , PUT and DELETE.
- Involved in creating various reports using **SSRS**.
- Involved in development of the **Data access layer, business logic layer (Middle tier) and the User Interface (Front-end)** .

Environment: C#, VB.Net, ASP.NET MVC, Visual Studio 2017/2019, SQL Server 2016, WCF, AngularJS, Angular2, Angular 6 and Angular 10. HTML5, CSS3, Bootstrap, Web API, JSON, AJAX, XML, GIT, SOAP and RESTful.

Client: BP(Infosys)

Location: Houston, Texas

Sep2022- May 2023

Role: .Net Developer

Description: British Petroleum (BP), commonly known as British Petroleum, is **one of the world's largest integrated oil and gas companies**. The company is involved in almost every step of the oil and natural gas supply chain, from exploration to the sale and marketing of energy products.

Responsibilities:

- Involved in Translating application storyboards and use cases into functional applications including business operational workflows.
- Involved in developing efficient, reliable and reusable web applications in C# and .Net Framework 4.5/4.0 to meet the business requirements using Visual Studio 2017/2019.
- Involve in application design and development of applications based on business user requirements by using C#, SQL Server 2017, Visual Studios 2019
- Developed solutions for diverse programming scenarios in C#, employing Object Oriented Programming (OOP) concepts such as: encapsulation, inheritance, polymorphism, and abstraction.
- Extensively used Model Binding technique in ASP .NET MVC to provide a well-designed bridge between HTTP Request Data and C# Action Methods.
- Implemented Error Handling using Try, Catch, finally to achieve exception handling and used Generics extensively in C# and ASP.NET MVC.
- Implemented Error Handling using Try, Catch, finally to achieve exception handling and used Generics extensively in C# and ASP.NET MVC.
- Involved working with Desktop Application managed infrastructure upgrades analysis, resolution of end user hardware and software issues, engaged with mobile, tablets, pc deployment issues.
- Responsible for designing and developing the UI using Bootstrap, HTML5, CSS3, AngularJs , Angular 2 , Angular 6 and Angular 10.
- Provisioning and setting up Azure subscriptions, Serverless functionality.
- Extracting GitHub events using Graph SQL and writing the data into Azure Cosmos DB.
- Setting up GitHub Actions to initiate deployment to Azure directly from GitHub repos using OICD and Terraform.
- Extracting data from ServiceNow SQL database and utilizing data from Azure cosmos dB to build a data source and exposing this data through a Rest API
- Developing an API Wrapper using Azure functions, Key Vault and exposing it to other entities within the organization.
- Created custom directives to reuse them across the application, to create own HTML tags and induce functional behavior to those tags using AngularJS, Angular2, Angular 6 and Angular 10.
- Used Dependency injection for injecting various AngularJS, Angular2 , Angular 6 and Angular 10 services to Angular Controllers. Also Implemented Angular Services to bind the data and provide access to the data on the server.
- Implemented WEB API services for CRUD operations with (SOAP and /or RESTful services) HTTP verbs GET, POST, PUT and DELETE.
- Created Database Tables and have written SQL Queries, Stored Procedures for all the Transactions in and out of the Database using SQL server 2017.
- Involved in unit testing by developing test plans and test cases.
- Involved in creating in-detail documentation for various workflows within the application.
- Utilized the GIT source control software to keep track of new and past versions of code written in the application.
- Involved agile development environment.

Environment: C#, VB.Net, ASP.NET MVC, Visual Studio 2017/2019, SQL Server 2016, WCF, AngularJS, Angular2, Angular 6 and Angular 10. HTML5, CSS3, Bootstrap, Web API, JSON, AJAX, XML, GIT, SOAP and RESTful.

Client: Value Momentum
Location: Hyderabad, India
Role: .Net Developer

Sep2018-Jan2019

Description: Value Momentum is an insurance-based company with their core, digital and data transformation initiative. Our IT services and software solutions help insurers deliver omni channel digital engagement, rapidly launch & refresh products, automate operations and democratic access to data.

Responsibilities:

- Worked on **Agile Methodology** to achieve smooth collaboration between self-organizing, cross functional teams.
- Participated in daily **Scrum** and weekly meetings with the project manager and architects to meet expectations and deadlines.
- Extensively involved in developing components for **Business Logic** and **Data tier** using **C#, ASP.NET MVC**, and **ADO.NET**.
- Working experience on Object Oriented analysis and design (**OOAD**), Scrum and Agile Development Methodology and Model-View-Controller Architectures (**MVC**) and **3-Tier/N-Tier Architectures**.
- Extensive experience in **T-SQL, MS IIS 7.5, HTML, JavaScript, AJAX, JQuery, DHTML, XHTML, XML, CSS**.
- Responsible for developing the reusable Components on **UI (Razor Views)** by developing the **Partial Views, View starts**, and reusable components for implementing the business rules with **C#** and **OOPS** Concepts.
- Expertise in developing applications using **Object Oriented Programming (OOP)** and **Service Oriented Architecture (SOA)**.
- Implemented enhanced user interfaces to enable the inputs of additional personal information to generate insurance plan using **HTML5, CSS3, jQuery**.
- Implemented **JWT Security** to provide **authentication** and **authorization** to secure the **Web API**.
- Developed **REST/WCF Web services, ASP.NET WEB APIs** and involved in pre-testing.
- Created and scheduled nightly **batch jobs** on SQL Server 2005 to execute the SSIS packages and refresh the reporting data from the data sources.
- Used **Entity framework** combined with **LINQ queries** to do database operations.
- Provisioning Azure SQL database and migrating data from On-Prem environment to Azure cloud.
- Enabling Firewall changes across the dependency resources from Azure to On-Prem.
- Setting up the Secure Message Block file-shares on Azure cloud and migrating the current on-prem Netezza file shares and re-architecting the applications.
- Setting up Azure webapps, Logic apps and functions.
- Worked on **TFS** for **version control**, Code Review and for automatic builds and continuous Integration.
- Performed **Unit testing** using **NUnit, Integration Testing, Performance Testing** and **System Testing**
- Migrated .Net application using Azure DevOps and AWS tools through integration and automation.

Environment: C#, ASP.NET 4.7, MVC5, HTML5, CSS3, Angular.js4, Visual Studio 2015/2017, Azure, SQL Server 2012/2014, WCF, Restful Services, JSON, AJAX, JavaScript, jQuery, TFS 2015, Entity Framework6.1.1, LINQ to SQL

Client: Access Meditech private Limited
Location: Hyderabad, India.
Role: .Net Developer

Aug-2017 - July 2018

Description: The **Access Meditech Private Limited(AMPTL)** is the full continuum service provider specialized in providing of business process and outsourcing services for the insurance & healthcare industry. The built-in controls supply various functions to ensure that data is clean and in order before the submission process. The main objective of the package is to provide customers with the options either to apply online or via a call center.

Responsibilities:

- Design and develop the National order and Tax school web application using **Asp.Net application** to support the business requirements.
- Translate user needs and business requirements into the needed screen/interface designs and workflow
- Involved in development of the **Data access layer, business logic layer (Middle tier) and the User Interface (Front-end)**
- Developed Webpages by using **MVC5 Razor, HTML5, CSS3, JavaScript, jQuery & Knockout.js**.
- Created desktop application with **Angular 2/4** and Unit Test with Karma-Jasmine
- Incorporated many rich, user friendly, responsive features in the application using **jQuery, JavaScript, Angular JS, AJAX** scripting.
- Widely used **HTML5** and **CSS3** for creating user interfaces.
- Used **JavaScript** and **jQuery** as Client-side scripting languages.
- Created login-based member's area that displays **ASP.NET MVC** web pages based on access levels and assigned Roles.
- Extensively used **Team Foundation server** for shelving the code changes, check in the code and tracking defects and requirements.
- Designed and Developed **WebApi's** for Microservice's.
- Setting up Connection Strings and connecting **SQL Server Databases from locally Installed SQL Server Management Studio (SSMS)**.
- Used **Cookies** and **Application Level State Management** in Application.
- Used **MAPI** to add messaging functionality for the client programs.
- Used **Extended MAPI** for creation and management of messages, management of client mailbox, service providers etc.
- Extensively used **Web-API& Restful Services** using **WCF** for client-server communication.
- Created efficient and compatible service calls to different applications to transfer data using **WCF**.
- Resolved the issues reported by **QA** and **UAT** teams.
- The **SDLC** methodology '**Agile**' is widely followed in the project, with regular scrum meetings and triage meetings to discuss about the project updates.
- Setting up their Azure cloud environment to move some of the applications and host it on the cloud environment.
- Utilizing REST APIs to retrieve the data hosted in Azure.
- Worked on AWS serverless architectures and integrated services through azure pipeline.

Environment: C#, ASP.NET 4.7, MVC5, HTML5, CSS3, Angular.js4, Visual Studio 2015/2017, Azure, SQL Server 2012/2014, WCF, MAPI, Restful Services, JSON, AJAX, JavaScript, jQuery, TFS 2015, Entity Framework6.1.1, LINQ to SQL

Client: V3 Staffing Solutions

Location: Hyderabad, INDIA

March 2011–July 2013

Role: .Net Developer

Description: V3 staffing solutions is the fastest growing insurance-focused IT services provides in North America. IT services and software solutions help insurers deliver omni-channel digital engagement, rapidly launch & refresh products, automate operations and democratize access to data. Responsible for developing and supporting web and desktop applications, interfaces, and reports. This includes technical analysis, design, development, testing, and support of software applications.

Responsibilities:

- Design and develop the **Asp.Net application** to support the business requirements.
- Translate user needs and business requirements into the needed screen/interface designs and workflow

- Used **ASP.NET AJAX Toolkit** controls like **Script Manager** and **Update Panel** within some web pages.
- Created **Web.config** files for setting up of the application by writing database connections.
- Developed the required Business Layer of the application using **C#**.
- Involved in building the queries, writing Stored Procedures, functions, and triggers.
- Extensively used **ADO.NET** to access **database object tables, stored procedures**, and implemented **Data Access Layer (DAL)**.
- Involved in setting up and managing the code repository (**GitHub**).
- Involved in creating various reports using **SSRS**.
- Involved in development of the **Data access layer, business logic layer (Middle tier) and the User Interface (Front-end)**
- Incorporated many rich, user friendly, responsive features in the application using **jQuery, JavaScript, Angular JS, AJAX** scripting.
- Used **JavaScript** and **jQuery** as Client-side scripting languages.
- Created login-based member's area that displays **ASP.NET MVC** web pages based on access levels and assigned Roles.
- Extensively used **Team Foundation server** for shelving the code changes, check in the code and tracking defects and requirements.
- Developed Webpages by using **MVC5 Razor, HTML5, CSS3, JavaScript jQuery & Knockout.js**
- Implemented Client side and server-side validations done using **JavaScript and Validation Controls** using **AJAX calls**.
- Setting up Connection Strings and connecting **SQL Server Databases from locally Installed SQL Server Management Studio (SSMS)**.
- Responsible for building an internal, responsive **AngularJS** single page application
- Used **MAPI** to add messaging functionality for the client programs.
- Used **Extended MAPI** for creation and management of messages, management of client mail box, service providers etc.
- Extensively used **Web-API& Restful Services** using **WCF** for client-server communication.
- Used **Entity framework** combined with **LINQ queries** to do database operations.
- Created efficient and compatible service calls to different applications to transfer data using **WCF**.
- Resolved the issues reported by **QA** and **UAT** teams.

Environment:C#, ASP.NET 4.7, MVC5, HTML5, CSS3, Angular.js4, Visual Studio 2015/2017, Azure, SQL Server 2012/2014, WCF, MAPI, Restful Services, JSON, AJAX, IIS 7.x, JavaScript, jQuery, TFS 2015, Entity Framework6.1.1, LINQ to SQL,ADO.NET, HTML, CSS, JavaScript, Visual Studio 2010, SQL Server 2005/2008, IIS 6.0, Web Services
