

Shirisha Gajula
Email: shirisha0317@gmail.com
Ph #: 720-828-3465

Professional Summary

- 8years of IT Experience in designing, developing, testing and implementing various stand-alone and client-server architectures based enterprise application software on different domains.
- Experience in all phase of SDLC like Requirement Analysis, Implementation and Maintenance, and extensive experience with Agile and SCRUM.
- Extensive Experience in design and developing the Web Services, RESTful API's for Mobile Apps using Python Django-REST and Flask Frameworks.
- Proficient in developing web applications implementing Model View Template architecture using Django web application framework.
- Experience in implementing with server-side technologies with Restful API and MVC design patterns with node JS and Django framework.
- Experience in developing web applications implementing Model View Template (MVT) architecture using Django web application frameworks.
- Expertise in test automation and continuous delivery of web applications, client server applications, web services/REST APIs Testing, with Python.
- Experience in developing web services (WSDL, SOAP and REST) and consuming web services with python programming language.
- Well versed with design and development of presentation layer for web applications using technologies like HTML, CSS.
- Experience in List Comprehensions and Python inbuilt functions such as Map, Filter and Lambda.
- Proficient in working with Python ORM Libraries including Django ORM, SQLAlchemy .
- Strong front-end development experience using React.js for building dynamic, single-page applications (SPAs) with reusable components and seamless user interactions.
- Experienced with MVW frameworks like Django, Angular Versions, HTML, CSS, XML, Java Script, jQuery, JSON and Node.js.
- Experience with automated CM and maintained a CI/CD pipeline, deployment tools such as Chef, Puppet, and Ansible.
- Experience in writing Sub Queries, Stored Procedures, Triggers, Cursors, and Func5ons on MySQL and PostgreSQL database.
- Proficient in using editors Eclipse, PyCharm, PyScripter, Notepad++ and Sublime Text while developing different applications.
- Experience in handling REST and SOAP Web Services and have Knowledge of Servers like Apache Tomcat and Web Logic.
- Utilized PyUnit, the Python unit test framework, for all Python applications.
- Experience in using version control systems like: (CVS, Git, and GitHub).
- Excellent Interpersonal and communication skills, efficient time management and organization skills, ability to handle multiple tasks and work well in a team environment.

Education :
Bachelor of Engineering, 2009 – 2013(JNTU)

Certifications: CERTIFIED KUBERNETES ADMINISTRATOR (CKA)

Technical Skills:

Operating Systems	Windows, Linux, Unix
Languages	Python, Java
Frameworks	Flask, Django, Angular Versions, ReactJs, Spring Boot
Web Technologies	HTML5, CSS3, AJAX, jQuery, Javascript
Observability	Grafana, prometheus , ELK, cloud watch
Version Controls	GitHub
Cloud Technology	Amazon Web Services
Python IDE	PyCharm, PyScripter, PyStudio, PyDev, Wing IDE, Spyder
Databases	RDBMS (Oracle, SQL Server, MySQL), No SQL (MongoDB)

Methodologies	Agile, V Model, Waterfall, Hybrid.
----------------------	------------------------------------

Professional Experience

Client: Bank of America, Denver, CO

Jan 2024 – Present

Role: Python Developer/Application Developer

Responsibilities:

- Participated in all phases of the Software Development Life Cycle (SDLC), including requirements gathering, design, development, testing, and deployment of scalable software solutions.
- Designed and developed backend applications using Python with Django, Flask, and FastAPI, leveraging Django's MVT architecture and building high-performance RESTful APIs.
- Built and integrated RESTful APIs using Django REST Framework (DRF), Flask, and FastAPI, supporting service-to-service communication and third-party integrations.
- Integrated frontend components built with React with backend services via RESTful APIs, enabling seamless user experiences across web applications.
- Integrated authentication and authorization using AWS API Gateway Authorizers, JWT, and role-based access controls to secure microservices and APIs.
- Developed robust ETL/ELT pipelines using Python and orchestrated workflows with Apache Airflow, AWS Glue, and Lambda to process structured and semi-structured data.
- Implemented scalable data processing solutions with Google BigQuery, writing optimized SQL queries for analytics, partitioning, and federated data querying.
- Automated data ingestion and transformation from sources like JSON, CSV, APIs, and cloud storage into BigQuery and AWS Redshift for downstream analytics.
- Designed efficient data models and schemas for both transactional and analytical workloads using PostgreSQL, MySQL, and BigQuery.
- Integrated Kafka and RabbitMQ, enabling asynchronous messaging and real-time event-driven workflows for financial applications.
- Authored Pytest-based unit and integration tests to ensure quality and reliability of backend logic, APIs, and data pipelines.
- Integrated Pytest into CI/CD pipelines using Jenkins and GitHub Actions for automated testing and validation during deployments.
- Containerized Python applications with Docker and deployed to Kubernetes clusters (EKS/GKE), ensuring scalability, availability, and performance.
- Orchestrated Lambda with S3, DynamoDB, Kinesis, and SNS to build fully serverless, event-driven architectures.
- Developed and deployed cloud-native applications on AWS using services like EC2, S3, Lambda, Cloud Functions, and Cloud Storage.
- Built robust ETL/ELT pipelines using Python, Apache Airflow, and AWS Glue, processing structured and semi-structured data from diverse sources.
- Implemented real-time data ingestion and processing using AWS Kinesis, integrating with downstream storage and analytics systems.
- Automated infrastructure provisioning with Terraform and Ansible for consistent, repeatable deployments across cloud environments.
- Used GitHub for source control and CI/CD integration, enabling automated builds, testing, and releases across multiple environments.
- Maintained documentation and tracked progress using Jira and Confluence, facilitating collaboration in Agile development teams.
- Provided ongoing production support, implemented bug fixes, and applied design patterns to improve code maintainability, reuse, and system performance.

Environment: Python, CICD , AWS, SQL, Pyspark, MangoDB, Jira , Anisble, MYSQL, PostgreSQL, Terraform ,JSON, ReactJS, Kubernetes and GIT

Client: Western Union, Denver, CO

Sep 2022 – Dec 2023

Role: Python Developer

Responsibilities:

- In this project, I was responsible for developing a multi-tier web application on AWS Cloud, automating infrastructure and configuration management using Terraform, Ansible, and Python.
- Designed and implemented full-stack applications using Python and Java (Spring Boot) for backend services, and React for the frontend—applying MVT and MVC architectures to ensure clean separation of concerns and maintainability.
- Built and deployed RESTful APIs using both Django and Spring Boot, integrating with PostgreSQL for robust and efficient data persistence.

- Integrated RESTful APIs with React frontend using Axios and Fetch API, handling data rendering, error states, and loading indicators.
- Implemented RESTful web services in Spring Boot, adhering to RESTful API design principles and supporting JSON/XML payloads for internal and external service communication.
- Worked extensively with a wide range of AWS services including EC2, ECS, EFS, Elastic Load Balancer, Elastic Beanstalk, Auto Scaling, Route 53, S3, IAM, AMI, SNS, DynamoDB, RDS, and CloudWatch.
- Automated routine tasks using Python scripts, including instance resizing, automated file uploads/downloads from S3, and system health checks—removing dependency on AWS Console.
- Automated infrastructure provisioning using Terraform modules and ansible playbooks, creating reusable and tested configurations for Staging, Testing, and Production environments.
- Deployed scalable, containerized micro services on AWS using Kubernetes and Docker, managing configurations and release versions with Helm charts.
- Developed and executed integration and functional test suites using Pytest for both Python and REST API components, ensuring reliability and correctness of backend services.
- Integrated Pytest with CI/CD pipelines for automated testing on code commits and pull requests, improving code quality and reducing deployment issues.
- Used Pytest fixtures, mocks, and parameterization to simulate complex environments and validate edge cases across infrastructure and application layers.
- Created REST APIs using AWS API Gateway integrated with Lambda functions, enabling server-less compute and micro service interaction.
- Engineered scalable analytics solutions using Snowflake, writing optimized SQL for complex data modeling and querying.
- Optimized query performance in Snowflake by leveraging clustering keys, materialized views, and result caching for high-performance reporting and analytics.
- Automated AMI creation and managed EC2 image lifecycle using Python scripts to support compliance and versioning needs.
- Monitored infrastructure and applications using Prometheus and Grafana, building custom dashboards for system, network, and application metrics with proactive alerting.
- Utilized Jira for issue tracking and workflow automation, customizing plugins and dashboards to align with Agile project requirements.
- Automated infrastructure provisioning using Terraform modules and Ansible playbooks, creating reusable and tested configurations for Staging, Testing, and Production environments.
- Employed Git for version control and collaboration, using branching strategies, tagging, and access controls to maintain code integrity across development cycles.
- Oversaw the entire Software Configuration Management (SCM) process, including code compilation, artifact packaging, deployments, release coordination, application configurations, and observability setup.

Environment: Python, Django, HTML5, CSS, JSON, ReactJS, Swagger, RESTful, MongoDB, MySQL, Terraform, Ansible, Jenkins, GitHub, Jira, Windows.

Client: CopperPoint Insurance, Phoenix, AZ

June 2021 – Aug 2022

Role: Python Developer

Responsibilities:

- Developed entire frontend and backend modules using Angular, Python, Django, Rest API, HTML5.
- Developed GUI using Django for dynamically displaying the test block documentation and other features of Python code using a web browser.
- Developed module to build Django ORM queries that can pre-load data to greatly reduce the number of databases queries needed to retrieve the same amount of data.
- Wrote Python normalization scripts and AWS Lambda functions to detect and eliminate duplicate data across environments.
- Development of Python APIs to dump the array structures in the Processor at the failure point for debugging.
- Developed Merge jobs in Python and AWS Lambda to extract and load data into MySQL, and worked on data lineage processes to map source-to-target DB, table, and column mappings using OO Python.
- Wrote and executed various MySQL database queries from python using Python-MySQL connector and MySQL DB package.
- Experienced in working on DevOps/Agile operations process and tools area (Code review, unit test automation, Build & Release automation, Environment, Service).
- Wrote Python OO Design code for manufacturing quality, monitoring, logging, and debugging code optimization. Added support for Amazon AWS S3 and RDS to host static/media files and the database into Amazon Cloud.
- Write Python scripts to parse JSON documents and load the data in database.
- Design and develop ETL integration patterns using Python.
- Developed the ETL jobs as per the requirements to update the data into the staging database from various data sources and REST API's.
- Working on the pipeline infrastructure (Docker, Ansible, Terraform, AWS and on-premises) and various related services (Python, Java).
- Wrote python scripts to perform CRUD operations on MySQL database.
- Created methods (get, post, put, delete) to make requests to the API server and tested Restful API using postman.
- Utilized continuous integration and automated deployments with Jenkins.

Environment: Python, Django, Angular, HTML5, Rest API, MySQL, AWS, Jenkins, GIT, Jira, Agile, Windows.

Client: Pikes Peak National Bank, Colorado Springs, CO

Jan 2019 – May 2021

Role: Python Developer

Responsibilities:

- Developed security policies and processes. Developed views and templates with Python and Django's view controller and templating language to create a user-friendly Website interface.
- Designed and Developed SQL database structure with Django Framework using agile methodology. Developed project using Django, SQL, Angular, JavaScript, HTML5, CSS3 and Bootstrap.
- Actively involved in Initial software development life cycle (SDLC) of requirement gathering and also in suggesting system configuration specifications during client interaction.
- Setup and build AWS infrastructure various resources, EC2, S3, IAM, Security Group, Auto Scaling and RDS in cloud Formation JSON templates.
- Implemented a CI/CD pipeline with Docker, Jenkins and GitHub by virtualizing the servers using Docker for the Dev and Test environments by achieving needs through configuring automation using containerization.
- Used Python and Django to interface with the JQuery UI and manage the storage and deletion of content.
- Creating RESTful web services with Django MVT and MySQL.
- Worked as part of an Agile/Scrum based development team and exposed to TDD approach in developing applications.
- Deployed ,supported container based python front applications in EKS cluster in AWS, using CICD pipelines along with scanning , testing, monitoring application.
- Deployed and tested different modules in Docker containers and GIT Implemented programming automations using Jenkins and Ansible on Unix/Linux based OS.
- Created methods(get, post, put, delete) to make request to the API server and tested Restful API using postman.
- Used Amazon Elastic Beanstalk with Amazon EC2 instance to deploy Django project into AWS. Configured continuous integration with Jenkins on Amazon EC2.
- Written functional API test cases for testing REST API's with Postman and Integrated with Jenkins server to build scripts.
- Extensive code reviewing using GitHub pull requests, improved code quality, and also conducted meetings among peer.
- Performed troubleshooting, fixed and deployed many Python bug fixes of the application.

Environment: Python, Django, HTML5, CSS, JSON, ReactJS, Swagger, RESTful, MongoDB, MySQL, Jenkins, GitHub, Jira, Windows.

Client: Sportsman's Warehouse, Midvale, UT

June 2017 – Dec 2018

Role: Python Developer

Responsibilities:

- Developed front-end validation in AngularJS using combination of HTML validator and ng-Required, checking them with \$invalid, \$valid, \$touched, \$untouched, \$dirty.
- Implemented Restful Services to develop Rest API's for various functionalities like managing inventory items, submitting form for customer management and handling purchase orders.
- Strong experience with Core Python, Django and Flask.
- Handled exceptions and used-test cases by writing python-scripts to refrain website from rendering Error codes.
- Involved in designing database Model, API's, Views using python to build an interactive web-based solution.
- Designed dynamic and browser compatible pages using HTML5, CSS3, JQuery and JavaScript and Angular JS and Responsible for creating the screens with table-less designs meeting W3C standards
- Used Python and Django creating graphics, XML processing, data exchange and business logic implementation
- Embedded AJAX in UI to update small portions of the web page avoiding the need to reload the entire page.
- Developed merge jobs in Python to extract and load data into MySQL database.
- Used regular expression for faster search results in combination with AngularJS built-in and custom filters.
- Provided GUI utilizing PyQt for the end user to create, modify and view reports based on client data.
- Worked on Jira for managing the tasks and improving the individual performance.
- Automated different workflows, which are initiated manually with Python scripts and Unix shell scripting.
- Advocate, implement, and adhere to Agile development practices, continuous integration, test-driven development best practices as they apply to front-end, JavaScript.

Environment: Python, Django, Angular JS, JavaScript, Shell Script, HTML5, CSS3, AJAX, XML, MySQL DB, PyQt, Jira, Agile, Windows.
