

Shiva Krishna Kota Devops Engineer

shiva.krishna@workwebmail.com | (469) 364-6380 | USA | [LinkedIn](#)

Summary

Results-driven DevOps Engineer with 2+ years of expertise in automating, optimizing, and securing infrastructure across cloud and on-premises environments. Skilled in CI/CD pipelines, containerization, IaC, monitoring, and security to enhance deployment efficiency and system reliability. Proficient in AWS, Kubernetes, Docker, Terraform, Jenkins, and Ansible, ensuring seamless application delivery. Strong background in collaborating with cross-functional teams in Agile environments to streamline workflows, reduce downtime, and improve system performance. Passionate about implementing scalable, high-availability solutions that drive business success.

Technical Skills

- **CI/CD & Automation:** Jenkins, AWS CodePipeline, GitHub Actions, GitLab CI/CD, Ansible
- **Containerization & Orchestration:** Docker, Kubernetes, Helm, OpenShift
- **Cloud & Infrastructure as Code (IaC):** AWS (EKS, EC2, S3, IAM, CodeBuild, CodeDeploy, Secrets Manager), Terraform, CloudFormation
- **Version Control & Repository Management:** Git, AWS CodeCommit, Bitbucket
- **Monitoring & Logging:** Prometheus, Grafana, Nagios, AWS CloudWatch, ELK Stack
- **Scripting & Configuration Management:** Bash, Python, PowerShell
- **Security & Compliance:** AWS IAM, Vault, FINRA/SEC compliance
- **Networking & Load Balancing:** Nginx, Apache, HAProxy, Kubernetes Ingress, AWS ALB
- **Databases & Storage:** MySQL, PostgreSQL, AWS S3, Kubernetes Persistent Volumes (PVs & PVCs)

Professional Experience

DevOps Engineer, Fisher Investments

05/2024 – Present | Remote, USA

- Developed Automated Investment Platform Deployment, implementing AWS CodePipeline-based CI/CD workflows, reducing deployment time from 60 to 40 minutes (30%) for seamless integration of financial applications to holding SEC and FINRA compliance.
- Configured AWS CodeBuild, CodeDeploy, and EKS for automated deployments, integrating Docker for microservices, improving system reliability, scaling to handle 500K+ daily transactions, and reducing deployment failures by 40%.
- Collaborated with 10+ engineers and financial analysts in Agile sprints, gathering deployment requirements, optimizing CI/CD strategies, and reducing feature release cycles from 2 weeks to 5 days.
- Integrated AWS CodeCommit for version control and CodeArtifact for dependency management, streamlining collaboration across five development teams and ensuring consistent package distribution across 100+ microservices.
- Secured pipelines using AWS Secrets Manager and IAM policies, protecting 5,000+ sensitive credentials, enhancing access control, and ensuring 100% compliance with financial security regulations.
- Automated infrastructure provisioning with Terraform and CloudFormation, reducing manual setup from 3 hours to 30 minutes (60%), enabling rapid environment provisioning, and ensuring regulatory compliance for financial applications.

Associate DevOps Engineer, ValueMomentum

01/2021 – 07/2022 | Hyderabad, India

- Containerized LAMP stack applications using Docker, reducing deployment time by 30% and ensuring uniform development, testing, and production environments, leading to a 40% decrease in environment-related issues.
- Deployed and managed Kubernetes clusters with 99.99% uptime, implementing node affinity and taints/tolerations to optimize resource allocation, improving application performance by 25% and reducing infrastructure costs by 15%.
- Configured Kubernetes Persistent Volumes (PVs) and Persistent Volume Claims (PVCs) for MySQL databases, ensuring zero data loss during container restarts and achieving a 100% success rate in stateful application deployments.
- Developed and optimized Jenkins-based CI/CD pipelines with 70% faster deployment cycles, integrating Git for version control and automating build, test, and deployment processes, reducing manual errors by 90%.
- Tuned Apache configurations inside Docker containers, reducing server response time by 40%, and leveraged Docker Compose for multi-container orchestration, improving application scalability and resource utilization.
- Implemented Nagios for proactive monitoring of 500+ containers, reducing incident response time by 25% and achieving a 98% SLA compliance rate, ensuring a stable and high-performing production environment.
- Automated infrastructure provisioning and configuration using Ansible, reducing server setup time by 60% and improving consistency across 100+ production and staging servers, eliminating configuration drift.

Education

Master of Engineering, Troy University
Computer Science

2022 – 2024 | Troy, AL, USA
