

Shiva Software Engineer

tshivark2023@gmail.com | (754) 227 9782 | Rogers, AR

Summary

Highly skilled Software Engineer with deep expertise in cloud-native architecture, distributed computing, and resilient microservices. Adept in Java, Python, and C++, with a strong track record of engineering high-performance, scalable systems leveraging AWS, Docker, and Kubernetes. Skilled at designing robust, fault-tolerant applications and data-powered platforms that serve millions of users reliably. Recognised for delivering customer-focused technology solutions through close collaboration across cross-functional Agile teams.

Professional Experience

Software Engineer, US Bank 08/2024 – Present | Remote, USA

- Engineered high-performance microservices using Spring Boot and virtual threads, enhancing concurrency and reducing API latency by 30%, while increasing system throughput by 40% for robust distributed transaction management.
- Built modular testing frameworks leveraging JUnit for unit tests and Cucumber for behaviour-driven development (BDD), boosting code coverage by 25% and maintaining regression safety to support faster release cycles.
- Created scalable RESTful and GraphQL APIs with the Interceptor Design Pattern, ensuring standardized outbound communication, minimising integration issues by 25%, and improving long-term maintainability.
- Integrated LaunchDarkly for feature flag management, enabling safe deployments, A/B testing, and multi-environment rollouts. Reduced production incidents by 30%, enhancing release confidence and targeted delivery.
- Partnered with cross-functional teams (Product, QA, DevOps) to oversee feature flag configurations across web and mobile platforms, enriching user personalization and increasing customer engagement.
- Automated build and deployment pipelines using GitHub Actions and Docker, cutting manual efforts by 50% and sustaining 99.9% uptime on Azure Kubernetes Service (AKS) for continuous software delivery.
- Optimized real-time streaming workflows with Kafka Streams, improving fault tolerance and lowering latency by 35%, enabling faster financial transaction processing and operational agility.

Software Engineer Intern, ADT 05/2024 – 08/2024 | Florida, USA

- Constructed RESTful APIs using Node.js and Express.js to facilitate seamless frontend-backend integration, decreasing page load time by 8% and enhancing system efficiency for over 3,000 users.
- Developed interactive UI elements using React.js and JavaScript, driving a 12% increase in user interaction and longer session durations through improved interface engagement.
- Established CI/CD automation pipelines via GitHub Actions and Docker, improving deployment reliability and reducing build duration by 20% for collaborative development workflows.
- Enhanced backend performance by implementing Redis for intelligent caching, reducing database strain by 25% and accelerating response time for high-demand API endpoints.

Software Engineer, Accenture 11/2021 – 12/2022 | Hyderabad, India

- Developed and fine-tuned ETL pipelines using Python, Apache Spark, and AWS S3, processing over 500GB of insurance data daily and increasing data availability and throughput by 25%.
- Architected distributed data solutions with Amazon DynamoDB and Redshift to support real-time insights, lowering query response times by 30% and facilitating quicker decision-making.
- Automated data ingestion mechanisms via AWS Lambda, eliminating 80% of manual intervention and ensuring punctual data refresh cycles across reporting platforms.
- Led data quality initiatives by scripting Python-based validation tools, improving insurance claim data accuracy by 15% and contributing to higher customer satisfaction and reduced error rates.
- Collaborated with product and engineering stakeholders to build scalable data workflows using AWS Glue, trimming data processing time by 20% and supporting high-volume customer operations.

Technical Skills

- Programming Languages:** Java, Python, C++, JavaScript, TypeScript
- Frameworks & Libraries:** Spring Boot, React, Node.js, Django, JUnit, Cucumber, Redux
- Cloud & DevOps:** AWS (EC2, S3, Lambda, DynamoDB, RDS, Redshift, API Gateway), Docker, Kubernetes, Git, Jenkins, GitHub Actions
- Databases:** MySQL, PostgreSQL, MongoDB, Redis, DynamoDB
- Distributed Systems & Microservices:** Microservices Architecture, Event-Driven Systems, Fault Tolerance, Kafka, Kinesis, Apache Spark
- Testing & Methodologies:** Agile, Scrum, TDD, BDD, Selenium, Postman, API Testing

Education

Florida Atlantic University Boca Raton, Florida, USA
Master of Science in Computer and Information Sciences 01/2023 – 12/2024
