PROFESSIONAL SUMMARY

Backend Software Engineer with 3+ years of experience building scalable APIs, data pipelines, and AI-driven systems using Python, TypeScript (Node.js), and SQL. Hands-on experience working with LLM-based workflows, data validation, backend performance optimization, and production debugging in startup and enterprise environments. Strong interest in building reliable, maintainable backend systems that power AI products at scale.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C#, SQL
Backend: Node.js, REST APIs, Data Pipelines, Background Jobs, Auth Flows
AI Systems: LLM workflows, Prompt Validation, RAG concepts, ML Pipelines, XGBoost
Databases: PostgreSQL, MySQL
DevOps: Docker, CI/CD (GitHub Actions), Linux, Cloud Fundamentals (Azure, AWS)
Observability: Logging, Metrics, Debugging, Incident Response

EXPERIENCE

- | | |
|--|--|
| Software Engineer Intern
<i>StrikeStock AI</i> | Jun 2025 – Present
<i>United States</i> |
| <ul style="list-style-type: none">– Built backend data pipelines in Python for high-frequency financial datasets used by AI models and analytics dashboards– Prepared validated and structured datasets for downstream ML workflows and LLM-powered analysis– Improved API performance through query optimization and efficient data processing– Worked in Linux environments to debug failures using logs and runtime telemetry– Collaborated with product teams to translate analytical requirements into backend services | |
| Software Engineer
<i>Ivanti</i> | Jan 2023 – Jul 2024
<i>India</i> |
| <ul style="list-style-type: none">– Developed and maintained backend services for enterprise ITSM platforms serving large customer environments– Owned production issues involving APIs, authentication, and data consistency across distributed systems– Performed root cause analysis using structured logs and metrics, delivering reliable hotfixes– Worked extensively on OAuth, SSO, and role-based access control related backend issues– Participated in incident response and post-incident reviews to improve system reliability | |
| Software Engineer
<i>Eflair</i> | Jul 2020 – Jan 2023
<i>India</i> |
| <ul style="list-style-type: none">– Built backend services and APIs using Python and JavaScript for web-based platforms– Implemented data processing logic, background jobs, and database integrations– Optimized backend performance by reducing query latency and improving request handling– Collaborated with frontend and product teams to deliver end-to-end features | |

PROJECTS

- AI Powered Recruiting Voice Agent:** Built an LLM-driven voice agent with real-time decision logic, input validation, logging, and guardrails to ensure safe and reliable responses across concurrent sessions
- Alpaca Stock Analytics Engine:** Designed analytics pipelines processing large-scale historical and intraday stock data, detecting missing intervals and computing completeness metrics using Python and SQL
- Azure Cost Optimization Tool:** Developed backend services to analyze cloud usage data and generate optimization insights with controlled and structured outputs
- MedAI Diagnosis Platform:** Built backend systems for processing structured and unstructured healthcare data, integrating multiple AI services with fallback mechanisms; awarded Overall Excellence Award

EDUCATION

- | | |
|---|---|
| Master of Science in Information Systems
<i>Central Michigan University</i> | Aug 2024 – Dec 2025
<i>United States</i> |
| Bachelor of Technology in Information Technology
<i>Keshav Memorial Institute of Technology</i> | Aug 2019 – May 2023
<i>India</i> |
