Professional Summary

Certified SAS programmer with 3+ years of experience in clinical research and programming. Skilled in developing and validating SDTM, ADaM datasets and generating tables, listings, and figures (TLFs). Strong foundation in ICH-GCP, CFR Part 11, and regulatory requirements. Adept at ensuring data quality, integrity, and compliance while collaborating across cross-functional teams.

Core Skills

- SAS Programming (Base SAS, SAS/Macro, SAS/SQL, SAS/ODS)
- SDTM and ADaM programming (CDISC standards)
- TLF generation for clinical study reports.
- Data visualization and Dashboard reporting
- Data cleaning, transformation and validation
- Debugging and error handling in SAS programming
- Knowledge of R programming
- Automation using macros for efficiency
- ICH-GCP, CFR 21 part 11, HIPAA, Regulatory compliance
- Understanding of the clinical trials life cycle

Professional Experience

Statistical Programmer Analyst

Hamilton Health Sciences, Hamilton, Ontario/Canada

{Jan 2021- Aug 2024}

- Developed and validated SDTM datasets in compliance with CDISC standards to support clinical trial analysis and regulatory submissions.
- Generated tables, listings, and figures (TLFs) using Base SAS and SAS Macro.
- Performed data cleaning, manipulation, and validation of clinical trial data from EDC systems and other sources.
- Supported clinical data management by performing data validation, discrepancy checks, and generating listings to identify data issues.
- Implement eCRF and/or edit check design and ad-hoc tool to support study requirements and to ensure accurate data collection.
- Apply the appropriate methodology used in clinical trial data management to the data capture system to ensure the completeness, accuracy, and consistency of the data collected.
- Prepare and validate listings and reports using clinical reporting and business intelligence tools to support the study's conduct and the data quality.

E-mail : mahajan.shivali@yahoo.com

- Worked on annotating the eCRFs as per CDASH and SDTM for multiple studies.
- Define, prepare and execute test specifications for validation purposes.
- Comply with good database design, programming standards, and organizational procedures.
- Closely worked with study teams with UAT testing to ensure the accuracy, quality and integrity of the data during mid-study changes.
- Developed and maintained data management and programming documentation following organizational procedures.
- Maintain a working knowledge of the internal system to generate project work.
- Managed clinical trial data using EDC systems, performing ongoing data validation, query generation, and discrepancy resolution.
- Collaborated with clinical and data management teams to ensure timely data cleaning and database lock.
- Participated in CRF review, edit check specification, and UAT for EDC setup and deployment.
- Prepared data listings and reviewed metrics to monitor study progress and data quality trends.

Sr. Batch Specialist

Aon Hewitt, Noida, UP/India

{Sep 2010- Nov 2015}

- Extracted healthcare data from DB2 with the help of SAS.
- Created SAS datasets, tables, reports and graphs.
- Used SAS procedures such as PROC TRANSPOSE, PROC FORMAT, PROC SUMMARY, PROC MEANS, PROC FREQ, PROC REPORT, PROC TABULATE, PROC SQL, and PROC PRINT to sort, print and summarize the data.
- Responsible for extracting, transforming, loading (ETL) and validating data in the system.
- Worked extensively in annual enrollment.
- Manipulated, cleaned, and processed the data using SAS and SQL.
- Involved in various testing types like UI testing, Functional testing, UAT, Integration testing, navigation testing, and regression testing.

Clinical Content Developer

ADI, Mohali, Pb/India

{Aug 2007- Aug 2010}

- Worked on gathering data from Phase I-IV studies of active drugs in autoimmune diseases.

Shivali Mahajan

E-mail : mahajan.shivali@yahoo.com

- Analyzed the data from all the pharmaceutical companies, press releases, medical schools, hospitals, CROs & drug development units worldwide and entered the study-related data in the database.
- Collected information about different phases of the drug from clinical and post-marketing phases on the pharmaceutical company's pipeline and other resources on the web.
- Worked on gathering results for completed clinical trials for Phases I, II, III, and IV.
- Collected specific data from the study protocol, such as Trial Objective, safety/efficacy endpoints, study design, inclusion/exclusion criteria, etc., and entered them in the database.
- Updated the database for any new updates about drugs related to different indications.

Education & Training

Post-Graduate Diploma in Clinical Research, Regulatory Affairs and Pharmacovigilance

Academy of Applied Pharmaceutical Sciences (AAPS College), Toronto

MSc. Bioinformatics

Sikkim Manipal University, India

BSc. Medical (Botany, Zoology, Chemistry)

Guru Nanak Dev University, Punjab, India

Certifications

SAS Certified Specialist: Base Programming Using SAS 9.4

Issued by: SAS Institute

https://www.credly.com/badges/ae56887a-7e1b-47eb-83cd-060e097fbe8e/public_url

ITIL certification

Issued by: PeopleCert

Certificate no.:GR671462910SM

****Career Break – Relocation****

2015-2020

- Relocated to the U.S. and was on an H4 visa (no work authorization).
- Continued professional development through self-learning and industry research.
- Volunteered with a tech team in a non-profit organization, contributed to website testing and JIRA-based issue tracking.

Aug 2024-Aug 2025

- Relocated from Canada to the U.S. and currently enhancing technical skills by learning R for data analysis and reporting.
