SUMMARY

Full Stack Developer with 4+ years of experience delivering scalable enterprise solutions using Java Spring Boot, Python, React.js, Node.js, and AWS. Skilled in building microservices and RESTful APIs with Hibernate and PostgreSQL, ensuring performance and data integrity. Optimized backend systems handling over 500K documents monthly, achieving 99.9% uptime and 45% faster release cycles. Also implemented GenAI-based automation to streamline workflows and enhance operational efficiency across finance, telecom, and healthcare domains.

SKILLS

Languages: Java, JavaScript, Python, Dart, SQL, C++,
Frontend: React.js, Next.js, Tailwind CSS, Redux Toolkit, HTML5, CSS3, SASS
Backend: Spring Boot, Node.js, RESTful APIs, GraphQL, Hibernate, JPA, Express.js, Apache Kafka
Cloud / DevOps: AWS (EC2, S3, Lambda), GCP, Docker, TerraformGitHub Actions, GitLab CI/CD, Prometheus, Grafana
Databases: MySQL, MongoDB, PostgreSQL, Redis
Testing & Tools: Selenium, Postman, JUnit, Cypress, Jest
Tools & Others: DSA, OOPS, GenAI, Git, Jira, LangChain, Clerk, Vercel, Webpack, VS Code
Certificates: AWS Certified Solutions Architect – Associate | McKinsey.org Forward Program

PROFESSIOALEXPERIENCE

Kofax, USA Full Stack Developer - Scaled invoice automation platform to handle 500K+ financial documents/month, improving processing efficiency 2× and achieving STP ≥98.5% through microservice decomposition and workflow optimization. - Re-architected legacy invoicing modules into Spring Boot microservices with Kafka-driven orchestration and idempotent retries, cutting exception handling time by 35% and reducing duplicate processing incidents. - Implemented zero-downtime migration using blue-green deployments, Flyway schema versioning, and CDC-based (Debezium) data sync, enabling safe rollout of payment logic changes without service interruption. - Introduced automated rollback strategies and OpenTelemetry-based monitoring dashboards, reducing MTTD to under 5 minutes and maintaining 99.9% uptime during peak load periods. - Integrated OCR (Textract) with GenAI normalization and rule/regex post-processing for totals, dates, POs, boosting consistency and accuracy. - Incorporated OAuth2/JWT authentication and multi-tenant access control, strengthening security and enabling scalable client onboarding - Containerized services with Docker and managed deployments on Kubernetes, improving environment setup, scaling, and release consistency. - Migrated frontend components to a WCAG-compliant React + TypeScript design system, increasing portal adoption from 45% → 67% and lowering UI defect rates release-over-release. - Modernized CI/CD by implementing environment-specific pipelines with Cypress/Postman gates and staged canary releases, reducing regression time by 45% and doubling deployment frequency.	Oct2024 – Present
Ericsson Global Services, India Full Stack Developer - Led SQL-to-PostgreSQL migration across 5G monitoring systems, redesigning schemas and implementing partitioning/index optimization, improving query speed by 3× and reducing infra maintenance overhead. - Built Spring Boot + Node.js event-driven services with Redis & RabbitMQ, processing 50,000+ network events/hour with 99.9% uptime and 35% reduction in backend latency through async message handling. - Applied auto-healing fault detection with rule-based triggers and Lambda, cutting incident resolution to <45 minutes during peak traffic. - Formed dashboards using React and TypeScript, enhancing responsiveness and user experience for network monitoring applications. - Optimized AWS infrastructure (EC2, Lambda, S3, CloudWatch) with autoscaling policies and proactive alerting, enabling multi-region failover and improving resilience under global 5G load spikes. - Executed automated unit and integration testing with JUnit and Postman, ensuring reliable APIs and reducing production defects. - Embedded GraphQL + Memcached caching layer, reducing p95 data access latency from 820ms → 310ms, improving responsiveness for 20K+ concurrent network diagnostic requests. - Deployed CI/CD with GitHub Actions, Terraform, and Grafana alerting, ensuring rapid deployment with monitored rollouts and improving engineering recovery confidence.	Jan 2022 – May2023
Accenture, India Full Stack Developer - Constructed Node.js microservices and REST APIs for high-throughput claims processing, scaling to 15,000+ transactions/hour with Kafka-based event streaming and Redis-backed response caching. - Optimized claims eligibility SQL workflows, reducing query execution time from minutes to seconds during enrollment spikes and improving end-user response consistency. - Upgraded claim validation flows to event-driven Lambda queues, reducing API blocking, improving fault isolation, and enhancing reliability. - Improved system reliability by monitoring with Prometheus and CloudWatch, using circuit breakers to reduce production issues and downtime. - Introduced automated deployment using Terraform + AWS CloudFormation, cutting environment setup time from days to hours, improving developer onboarding and deployment repeatability. - Established HIPAA-compliant document handling on AWS S3 with encryption and access control policies, enabling secure processing of 12,000+ daily claims across 8+ healthcare integrations.	Mar 2020– Dec 2021

PROJECTS

PDF Reader with Gemini AI Integration , <i>Next.js, React, LangChain, Gemini API, Clerk, Convex, Vercel</i>	link
- Created a Next.js/React document search with LangChain and Gemini; reducing search latency by 40%, leading to faster and accurate user results. - Leveraged authentication using Clerk and session persistence with Convex, Deployed on Vercel with optimized build/runtime settings and pipeline	
SnapTrack - Expense Management System <i>S3, Lambda, SES, Textract, DynamoDB, API Gateway</i>	link
- Engineered serverless receipt OCR solution to extract expense data from uploaded invoice using Lambda, Textract and DynamoDB. - Automated line item and total extraction with regex parsing, minimized human errors and reducing manual entry time by 90%	

EDUCATION

Master of Science in Computer Science | **Illinois Institute of Technology, Chicago**
