

SHIVANI KANODIA

+1-341-240-9988 | kanodiashivani27@gmail.com | [Linkedin](#) | [Github](#) | Hayward, California

EDUCATION

California State University, East Bay — Master of Science, Business Analytics. Aug 2024 – May 2026
Coursework: Data Mining, Optimization Methods for Analytics, Time Series Analytics, Big Data Applications

PROJECTS

RAG AI Agent Pipeline | [\(Link\)](#) Jun 2025 – Present

- Developed an AI pipeline using RAG with vector embeddings and bi-/cross-encoder models, integrated with Databricks Llama-4 to generate role-aligned summaries from 100+ resumes in <7 seconds, improving recruiter screening efficiency by 3x.
- Defined and tracked evaluation metrics for relevance, latency, and accuracy; automated candidate comparison workflows.

Credit Card Fraud Detection | [\(Link\)](#) Apr 2024 – Present

- Engineered data preparation and modeling pipeline to train, test, and deploy fraud detection models using XGBoost and Flask API. (Spending patterns, Temporal trends, Transaction-velocity, Geological factors and merchant level risk)
- Achieved 82% recall — detecting 82 of 100 frauds — with scalable monitoring via reproducible ML pipeline.

Gmail-LLM-Sheets-Automation |

- Implemented a workflow to ingest, explore, and aggregate attachments metadata from Gmail in Google Cloud Storage, and structured it with an LLM (Groq API). This project involved schema design, data quality checks, and building an efficient aggregation pipeline. (BigQuery, Python).

WORK EXPERIENCE

Databricks Pvt Ltd — People Analyst | Bangalore, India | Feb 2024 – Jul 2024

- Reduced employee attrition by 28% by developing predictive models using Python to identify workforce risk factors, delivering robust analysis. (Pandas, Numpy and Scikit-learn).
- Leveraged DatabricksSQL for scheduling and managing complex data processing workflows, improving data processing efficiency by 40%, which resulted in saving around 15 hours per week.
- Evaluated model performance using confusion matrices, ROC curves, and SHAP feature importance.
- Developed ML observability workflows using MLflow to track experiments and versioning, monitor performance metrics, aligning with governance standards.

Akamai Technologies — Consultant | Bangalore, India | Sep 2021 – Nov 2023

- Extracted user engagement data via APIs and automated Exploratory Data Analysis using Python to analyze impressions, CTR, engagement rate, and unique visitors, uncovering insights that increased page traffic by 120%.
- Ingested and cleaned 250K+ sales records using Python (pandas, SQL), comparing demand by region, month, and category to detect key growth/decline patterns.
- Analyzed 12 months of retail data across 5 regions and product categories, identifying 17% month-over-month growth in high-demand categories and influenced pricing decisions.
- Collaborated with Leaders and Partners to effectively communicate insights and recommendations via presentation and dashboards, and delivered capabilities that enhanced monitoring and decisions reliability.

Dexian (DISYS) — Business Analyst | Chennai, India | Aug 2018 – Apr 2021

- Enhanced operational efficiency by through process documentation and implementation improvements.
- Collaborated with cross-functional teams (HR and IT) to define requirements and improve TA workflows and processes.
- Saved ~40 hours per month in manual reporting by developing centralized TA dashboards using Tableau to visualize KPI's, empowering partners with real-time workforce insights and measure initiative outcomes.

SKILLS

Technologies: RAG, Python (Pandas, NumPy, scikit-learn, matplotlib, TensorFlow, spaCy), SQL, ML Algorithms (Logistic Regression, Random Forest, XGBoost, Clustering) ANN, LLMs, Linear Programming, GenAI, Bi-/Cross-encoder models

Tools: Tableau, Gurobi, Git, VS Code, FlaskAPI, Streamlit, n8n, Jupyter Notebooks, MLflow, Docker, Databricks Notebooks,
