Summary

Data Engineer with 2+ years of experience building scalable data pipelines, deploying analytics workflows in cloud environments, and automating data ingestion and transformation across structured and event-driven architectures. Proficient in Python, SQL, Azure (ADF, Synapse, Fabric), Spark, SQL, Tableau, Power BI and Kafka, with a strong foundation in data governance, real-time streaming, and CI/CD. Passionate about optimizing big data systems to deliver secure, reliable, and high-impact solutions.

Experience

Software Engineer (Data Engineering) | Gap Inc.

June 2022 – Dec 2023 | Hyderabad, India

- Developed and managed scalable ETL pipelines using Azure Data Factory, Azure Analysis Services, and RabbitMQ.
- Developed and maintained .NET-based integrator services to support data ingestion and orchestration in enterprise data pipelines.
- Implemented automated alerting workflows using Azure Logic Apps to monitor pipeline failures and system events.
- Automated data ingestion and transformation using Azure Virtual Machines and Logic Apps.
- Maintained CI/CD pipelines ensuring 99% system uptime and consistent data delivery.
- Integrated MS SQL Server Data Marts to enhance reporting performance and analytics accuracy.
- Designed and deployed a self-service reporting platform to streamline data access across business units.
- Led Agile-based sprint planning, reporting, and full-cycle application development for foundational product teams.
- Supported DevOps operations and enhanced BI integrator and DataMart capabilities.
- Utilized Kafka and other event-driven tools to enable real-time data processing.

Software Intern | Simplify Workforce Pvt Ltd.

August 2021 - April 2022 | Hyderabad, India

- Assisted in building ETL workflows using Azure Data Factory to automate data ingestion from external sources
 - Developed data transformation pipelines with Azure Logic Apps and Azure Functions to streamline business processes
 - Supported integration of MS SQL Server with Azure services to enable real-time analytics and reporting
 - Monitored pipeline health and implemented logging solutions for error tracking and performance optimization
-

Education

M.S. in Computer Science | Oregon State University

Coursework: Database Management Systems, Deep learning, Data Analysis

Jan 2024 – June 2025 | Corvallis, OR

GPA: 3.62/4.00

B.Tech. in Computer Science | CVR College of Engineering

Coursework: Machine Learning, Database Management Systems

August 2018 – May 2022 | Hyderabad, India

CGPA: 8.46/10

Technical Skills

- **Languages:** Python, SQL, PySpark, Java, KQL
 - **Big Data & Streaming:** Apache Spark, Kafka, RabbitMQ, Synapse
 - **Cloud Platforms:** Azure, Kubernetes, Docker, AWS, Databricks
 - **Databases:** MS SQL Server, MySQL, MongoDB
 - **DevOps:** Azure DevOps, Jenkins, Git, Jira
 - **Data Engineering:** ETL, Data Modeling, Data Warehousing, Workflow Automation, Real-time Processing
 - **Security & Compliance:** Data governance practices, access controls (project-based)
 - **Data Analysis & Visualization:** Tableau, Power BI, Microsoft Excel, Pandas, NumPy, Scikit-learn, Matplotlib
-

Projects

- **Netflix Azure End-to-End Data Engineering Project:** Designed and implemented a complete data pipeline using Azure Data Factory to ingest structured and semi-structured data, orchestrating transformations in Azure Databricks with PySpark for efficient staging and cleansing. Leveraged Delta Lake for reliable storage, integrated with Azure Synapse Analytics for optimized reporting, and configured Azure Monitor for alerting and logging. Ensured the overall architecture met best practices for scalability, reliability, and security.
- **British Airways Review Dashboard | [Tableau Public Link](#) :** Developed an interactive Tableau dashboard to analyze customer sentiment from over 15,000 British Airways reviews, cleaning and modeling data to highlight rating trends, satisfaction by location, and overall sentiment. Incorporated filters, KPIs, and custom charts to enable dynamic, user-driven insights.
- **Real-Time Road Damage Detection Using YOLOv8:** Built a deep learning system using YOLOv8 to detect road damage from over 47,000 images, achieving 60.06% test accuracy. Developed preprocessing pipelines with Python, Pandas, and NumPy, and visualized results using Matplotlib to support model evaluation.
- **Spam Email Detection System:** Developed a machine learning model to detect spam emails using Python and Scikit-learn, with emphasis on text preprocessing, feature extraction, and classification to improve prediction accuracy.
