SUMMARY

SQL Developer with over 4 years of experience in database design, development, and optimization. Expertise in writing complex SQL queries, optimizing performance, and implementing advanced data analysis techniques. Proven ability to improve system efficiency and reliability, ensuring data integrity and security.

EDUCATION

George Mason University | Fairfax, VA. (CGPA: - 3.89/4)

January 2022 – August 2023

Masters in data Analytics Engineering

Amrita School Of Engineering | Bengaluru, India. (CGPA: 7/10)

August 2013 – May 2017

Bachelor of Engineering in Computer Science and Engineering

SKILLS

Programming Languages: R, Python, SQL, HTML, C, C++, JAVA, JavaScript, Microsoft SQL Server, Mongo db.

WORK EXPERIENCE

George Mason University | Fairfax, VA

January 2024 – Present

Role : Research Intern

- Engaged in ongoing research with Prof. Brett Berlin on the ethical ramifications of AI technologies in areas such as privacy infringement, algorithmic bias, and societal impact, with the goal of shaping policy frameworks and guiding industry practices through evidence-based insights.

Technikons | India

Role: SQL Developer | Duration: 4 years

September 2017 – October 2021

- Created and optimized views to enhance data retrieval efficiency. Developed complex SQL queries including joins, subqueries, nested queries, and common table expressions (CTEs).
- Leveraged ETL tools to extract, transform, and load data from multiple sources into the central data warehouse while enhancing database performance through the analysis and optimization of Query Execution Plans and indexing strategies.
- Developed complex SQL queries utilizing joins, subqueries, nested queries, CTEs, and window functions such as RANK, DENSE RANK, LEAD, ROW NUMBER, LAG, FIRST_VALUE, LAST_VALUE, and NTILE, while implementing partitioning strategies and advanced indexing techniques to efficiently manage large datasets.
- Implemented additional control commands such as SAVEPOINT for managing transactional states effectively, SET TRANSACTION for specifying transaction characteristics, and SET TRANSACTION ISOLATION LEVEL for controlling concurrency and data consistency levels across transactions.
- Developed database triggers for enforcing business rules and data integrity, alongside creating stored procedures and user-defined functions to automate recurring tasks. Contributed to web application development by handling design documentation, defect resolution, feature implementation, and sprint tasks.
- Employed SQL transaction control commands (BEGIN, COMMIT, ROLLBACK) to maintain data consistency during intricate operations, ensuring robust data integrity throughout critical processes.

ACADEMIC PROJECT

Cyber Security Exodus- The Dichotomy of Departure and Deterrence

May 2023 – August 2023

This study examined potential factors affecting why cyber workers leave the workforce including salary, quality of life, work location, and experience level to find potential patterns and assess which factors have the most significant impact. The project used exploratory analysis and statistical approaches to classify and validate categorization and regression analysis. This research applied various machine learnings algorithms including Support Vector Machines, K-fold, Random Forest, Decision Tree, Gradient Boosting, and Logistic Regression. This project identified potential trends, correlations, and factors influencing cybersecurity professional's decisions.
