

Shiva prasad Dubyala

Data Analyst

Email: shiva.spd7@gmail.com

Mobile: 956-707-0477

SUMMARY:

- Overall 5+ years of hands-on experience as a Data Analyst in Data Warehousing, Data Integration, and Data Modelling, including design, development, coding, testing, bug fixing, and production support of data warehousing applications.
- Hands-on experience in writing PySpark Scripts to process streaming data from data lakes.
- Good understanding of Data Marts, Data warehousing, Operational Data Store (ODS), calculation scripts, data matrix, OLAP, Star Schema Modeling, Snow-Flake Modeling, partitions, facts, and dimension tables using MS Analysis Services.
- Experience on handling different file formats like CSV, JSON, and PARQUET.
- Experienced in Birst BI, Microsoft Power BI, Amazon Redshift and Snowflake.
- Experience in developing reports and dashboards with Power BI Desktop & Services.
- Scheduled Airflow DAGs to run multiple jobs independently with time and data availability.
- Experience with the Snowflake including the creation of tables.
- Strong knowledge of Data Warehousing methodologies and concepts, including star schemas, snowflakes, ETL processes, dimensional modeling, and reporting tools.
- Extensive experience in using Microsoft BI studios products like SSIS, SSAS, and SSRS for implementation of ETL methodology in data extraction, transformation, and loading.
- Having knowledge of connecting to various data sources through Power BI for data import.
- Resolved issues with Indexes, Blocking, and locking issues to remove the performance bottlenecks and perform SQL tuning.
- Created and manipulated various management reports in MS Excel for sales metrics using VLOOKUP and Pivot tables
- Created Excel pivot tables, which showed a table of users that, have not performed scanning of journal voucher documents. Users were able to find documents by double-clicking on his/her name within the pivot table
- Perform data checking, analyzing, organizing, visualization and clarification using advance excel skills
- Knowledge and experience with AWS services (S3, Glue, Redshift, QuickSight, Sagemaker, Lambda)
- Experience in working with Data Warehousing and business intelligence tools for developing various reports.
- Analyzed SQL queries using Execution plan, Query Analyzer, SQL Profiler, and database Engine tuning advisor.
- Experienced in Agile and Waterfall SDLC environments, involved in requirement gathering, process modelling, and iterative refinement of business requirement documents (BRDs).
- Experienced in working with JIRA software, including creating and managing projects, workflows, custom fields, dashboards, and reports.
- Proficient in data analysis, utilizing advanced analytical tools (R, Python, SAS, SQL, Power BI, Tableau) to uncover actionable insights and support evidence-based initiatives.
- Hands-on experience in using tools like Index Tuning Wizard, SQL Profiler, and Windows Performance Monitoring.
- Experience in scheduling SSIS packages using SQL Server Agent.
- Experienced in MS SQL Server and T-SQL
- Experience in working with Reporting tools like MS SQL Server Reporting Service (SSRS).
- Expertise in Code optimization of SQL queries and stored procedures.

TECHNICAL SKILLS:

Programming Languages	SQL, Spark SQL, PLSQL, C, Python, Pyspark
Technical Databases	Oracle, SQL Datawarehouse, Amazon Redshift, Snowflake
Packages (Python & R)	Numpy, Pandas, Scipy, Matplotlib, SciKit-Learn, StatsModels, Plotly, Seaborn, Bokeh, TensorFlow, Keras; ggplot2, tidyr, dplyr, purr, caret, Hmisc, quantmod, shiny, plyr, knitr, mlr3, XGBoost, xts, nlme, fGarch, tseries
BI Visualization Tools	Birst BI, Tableau, Power BI
ETL Tools	ADF, Informatica, SSIS, Airflow, Cronicle.
Version Control Tools	GitHub
Certifications	Google Analytics, Tableau

PROFESSIONAL EXPERIENCE:

Controlspace Ltd,kentucky

Dec 2024 – Till Date

Role: Data Analyst

RESPONSIBILITIES:

- Created AWS S3 buckets and managed policies for S3 buckets for storage and backup on AWS.
- Collecting data from edge device databases, exporting it in CSV format, and storing it in AWS S3 buckets.
- Using PySpark, data processing tasks are created like reading data from external sources, merging the obtained data, performing data enrichment, and loading into data warehouses.
- Using PySpark, performed transformations and actions on imported data from AWS S3.
- Created tables in AWS Athena to get the data from S3 before loading the transformed data into Power BI.
- Scheduled Airflow DAGs to export data from S3 to Power BI dashboard.
- Developed robust and scalable data integration pipelines to transfer data from an S3 bucket to a Snowflake.
- Developed Spark-based real-time data ingestion and analytics to power the system's monitoring dashboards.
- Prepared data for analysis by performing data cleansing using Python and transforming data into a suitable format for analysis.
- Data validation & development of reports from SQL, Power BI, MS. Access, OBIEE warehouse and Oracle with advanced excel functions like (VLOOKUP, Hlookup, Index, macros, etc.), along with structural and user documentation
- Extracted and analyzed data using extensive SQL queries and Oracle Business Intelligence tools, into Excel and created Macros and Pivot tables to analyze the data
- Handled and used VBA objects, SQL, advanced Excel skills and relational database models to create interconnected systems among MS Access, Excel, Outlook and Word to streamline reporting, analyzing and data processing
- Employed Python, R, and SQL for data analysis and data profiling tasks to identify data patterns, anomalies, and trends in legacy datasets
- Worked with Snowflake cloud data warehouse and AWS S3 bucket to integrate data from multiple source systems, including loading nested JSON format and Parquet data into Snowflake table.
- Assisted in the design and implementation of data extraction, transformation, and loading (ETL) processes to migrate data from legacy systems to Tableau

- Implemented Data warehouse solution consisting of ETL, On-premises to Cloud Migration, and good expertise in building and deploying batch and streaming data pipelines on cloud environment.
- Used Power BI for Visualization charts etc. and regularly communicated findings with Product Owners.
- Worked on Power BI Visualization Charts and daily status Dashboards.
- Worked extensively with Confidential Excel (Macros, VLOOKUPS, and Pivot Tables), R Studio and Python scripting to code predictive models and data wrangling
- Collaborated with data engineers and stakeholders to design and implement data models for data warehousing solutions.
- Utilized relational and dimensional database models, SQL, advanced Excel skills, and VBA Macros to identify errors, streamline and prepare reports, and achieve departmental goals
- Created interactive and visually appealing data dashboards and reports using Power BI and Tableau. Transform raw data into meaningful insights to facilitate decision-making
- Demonstrated good communication skills and story narratives while Sprint Demos to leadership and Stakeholders.

Environment: Pyspark, Snowflake, AWS, SQL

Softpath Systems, Hyderabad

Jan 2023 - Nov 2024

Role: Sr Data Analyst

Responsibilities:

RESPONSIBILITIES:

- Understanding the Client usage and fixing the issues.
- Creating reports when needed.
- Actively involved for testing after creating reports.
- Apply the hot fixes in production environments.
- Ensure data quality, security, & integrity by developing and maintaining data models via Cosmos Scope & Kusto scripts, Xflow and DataGrid scheduling, UAM Dynamics DB, validating datasets using T-SQL queries and Power BI DAX code, and by developing advanced analyses with slicer-enabled Excel Pivot Tables & PowerPivot DAX
- Interacted with the clients to make enhancements in the reports. Involved in the design of Data-warehouse using Star-Schema methodology and converted data from various sources to SQL tables.
- Created action filters, parameters and calculated sets for preparing dashboards and worksheets using Power BI
- Designed complex data intensive reports in Power BI utilizing various graph features such as gauge, funnel.
- Created a database or data warehouse, constructing SQL objects such as tables, views, user-defined/table-valued functions, stored procedures, triggers, and indexes.
- ETL pipelines were created in and out of the data warehouse using a combination of Python and Snowflake's Snow SQL
- Development and update of the ETL packages, tasks, workflows etc. and development of the multiple transformations to extract, transform and load data from various data sources like flat files, excel, CSV, MS Access etc
- Evaluated the SQL scripts and created PySpark-based solutions
- Created DAX columns and measures over data models for the purpose of enhancing Power BI visuals.
- Used Table, Matrix, Bar, Card, Gauge, Slicers etc. and Custom Visualizations in Report Development.
- Having knowledge publish dashboards on Power Bi Services.
- Good understanding on ETL process
- Worked closely with the development team to design and implement Excel-based data transformation processes, including creating pivot tables, conditional formulas, and VLOOKUPS for seamless data migration
- Leveraged Snowflake's features and capabilities to perform data analysis tasks. Writing SQL queries and utilizing Snowflake's functions and syntax to extract, transform, and analyze data stored in Snowflake.
- Worked on extracts and scheduling them on Power BI service.
- Managed access of reports, dashboards and data for individual users using roles.

- Providing the access to the spaces upon the approvals.
- Working on the issue upon the given SLA time and make sure it doesn't get breached.

Environment: Birst BI, Redshift Workbench, AWS S3, SQL

Cloud Resources LLC, Hyderabad

sep 2020 – jul 2023

Role: Software Engineer

Responsibilities:

RESPONSIBILITIES:

- Developed and optimized SQL queries and PL/SQL scripts for financial data analysis and reporting across payment systems.
- Developed and optimized SQL queries and PL/SQL scripts for financial data analysis and reporting across payment systems.
- Created dashboards and visualizations using Tableau and Power BI, providing key insights for payment transactions and financial data trends.
- Maintained Excel workbooks, such as development of pivot tables, exporting data from external SQL databases, producing reports and updating spreadsheet information
- Worked with cross-functional teams to design and implement ETL processes, ensuring smooth data flow from various sources like AWS Redshift and MySQL.
- Integrated APIs to connect external data sources, enabling seamless data flow between AWS services and other cloud-based applications for real-time data analysis and reporting.
- Analyzed data from payment processing systems, applying standards like ISO 20022 and SWIFT to ensure compliance and integration.
- Automated data workflows using Python and SQL to improve operational efficiency and reduce manual reporting tasks.
- Collaborated with business teams to gather requirements and build custom ad-hoc reports, supporting strategic decision-making.
- Ensured data quality and governance, conducting audits and maintaining data documentation for regulatory compliance.
- Conducted performance tuning and optimization of SQL queries and ETL processes to enhance data processing speed and efficiency, leading to faster report generation and improved system performance.
- Engaged in regular stakeholder communication to present findings and insights derived from data analysis, facilitating informed decision-making and aligning data reporting with business objectives.

Environment: SQL, PL/SQL, Python, AWS, AWS Redshift, MySQL, Tableau, ETL, API Integrations, ISO 20022, Volante Clou

Education:

- **Masters in Data Science, MontClair State University May'2025**
- **Bachelors of Electronics & communication Engineering, KU -Jun 2020**
