PROFESSIONAL SUMMARY

Full Stack Software Engineer with 5+ years of experience designing and delivering enterprise-grade applications in auto lending, banking, and financial services. Expertise in C#, .NET Core, ASP.NET, React, Angular, WPF, SQL, PostgreSQL, MongoDB, and enterprise cloud platforms (Azure, AWS). Strong background in secure authentication (OAuth2, SSO), microservices architecture, and real-time data pipelines with Kafka. Adept at building solutions that improve efficiency, customer adoption, and compliance. Highly collaborative in Agile environments with experience in CI/CD, DevOps, and mentoring teams.

SKILLS

Languages & Frameworks	C#, .NET Core, ASP.NET MVC, Python, Node.js, React, Angular, WPF, TypeScript, JavaScript, LINQ
Web Technologies	HTML5, CSS3, PHP, Bootstrap, jQuery
Database & ORM	Microsoft SQL Server, PostgreSQL, MongoDB, Oracle, T-SQL, GraphQL, KQL, Entity Framework
AI Tools/Technologies	AI model development, Predictive Analytics
Azure Services	Azure Data Factory, Synapse Analytics, Databricks, Functions, Service Bus, PowerApps, Blob Storage, Logic Apps, CosmosDB, App Insights
AWS Cloud	AWS Lambda, S3, Rekognition, DynamoDB, EC2, Step functions, AWS Gateway, IAM
CI/CD & DevOps	Azure DevOps, Docker, Jenkins, Git, GitHub, Team Foundation Server, NPM, Jira
Tools	Visual Studio, VS Code, Swagger, Postman
Testing Frameworks	NUnit, Jest
Operating Systems	Windows, Linux, MacOS
Soft Skills	Strong communication, analytical and problem-solving skills; adaptable, collaborative, and experienced in code reviews.

EXPERIENCE

Wells Fargo Las Vegas, USA

.Net Developer

Nov 2024 – Present

- Built and enhanced lending platforms and data solutions supporting Wells Fargo’s auto lending business, including loan pricing, campaign rates, and enterprise data reporting.
- Designed and delivered a .NET Core and Entity Framework data portal, automating data extraction and cleansing into SQL Database, improving processing efficiency by 25% and enabling faster business reporting.
- Developed PricingV3 API to calculate auto loan rates (standard and subvented campaigns) in real time, integrating campaign logic based on parameters such as bulletin ID and loan term, which accelerated dealer campaigns and customer pricing accuracy.
- Integrated responses with MongoDB for tracking and Kafka for Data Warehouse consumers, ensuring consistent and accurate pricing data across systems.
- Implemented a rate sheet catching mechanism, enabling instant responses on first request and syncing with monthly DW updates, improving loan officer productivity.
- Architected React UI with RxJS state management, enhancing responsiveness and improving performance by 30%.
- Optimized SQL queries, views, and functions, reducing query execution time by 30%, which accelerated credit decisioning and reporting.
- Automated ETL workflows with Azure Data Factory, Azure Functions, and Service Bus, reducing data processing time by 20% and streamlining metadata migration.

- Built proactive monitoring dashboards with KQL and Azure Monitor, reducing downtime incidents by 20% and ensuring uninterrupted lending operations.
- Improved release reliability with Azure DevOps CI/CD pipelines, cutting deployment failures by 20% and increasing release frequency by 30%.
- Strengthened platform stability with unit testing (NUnit, Jest), detecting 95% of issues before release.
- Developed Power BI dashboards with DAX and KQL, cutting reporting time by 40% and enabling real-time business insights.
- Mentored interns and junior developers, reducing deployment issues by 20% and accelerating onboarding.
- Authored detailed technical documentation, improving maintainability and knowledge transfer.

Capital One Financial Corporation Las Vegas, USA

.Net Developer

Feb 2023–Oct 2024

- Developed and maintained microservices-based auto lending platforms (Auto Navigator, Dealer Navigator, Showroom) using ASP.NET Core, WPF, and REST APIs.
- Implemented Single Sign-On (SSO) with OAuth2 to unify multiple prequalification applications into one secure platform.
- Built containerized services with Docker, improving scalability and reducing environment setup time by 40%.
- Automated credit review and stipulation workflows by integrating microservices for document ingestion, validation, and decisioning.
- Integrated Kafka-based messaging queues to enable asynchronous communication between microservices, improving scalability and reducing processing latency.
- Engineered an event-driven pipeline using Kafka, Postgres, and AWS S3 for real-time synchronization of extracted document data.
- Implemented role-based access control (RBAC) across microservices, strengthening application security and ensuring compliance with enterprise access policies.
- Designed and optimized SQL Server and PostgreSQL stored procedures, reducing query execution time by 30–40%.
- Conducted end-to-end testing across services with NUnit and automated pipelines, improving release reliability.
- Implemented logging and monitoring solutions with Azure App Insights, enabling proactive issue detection and reducing production incidents by 20%.
- Implemented CI/CD pipelines with Azure DevOps for automated builds, testing, and deployments, reducing manual effort and increasing release velocity.
- Deployed and monitored applications in Azure, leveraging App Services, Functions, and Service Bus for scalability and performance.
- Designed API documentation with Swagger and Postman collections, improving developer onboarding and reducing integration issues across teams.
- Implemented Agile SDLC practices with Jira, improving sprint efficiency by 20% and reducing project delays by 60%.

Billion Apps Hyderabad, India

Software Developer

Feb 2020 - Apr 2022

- Built web scraping solutions with Scrapy, handling dynamic content, pagination, and AJAX, achieving a 95% data extraction success rate.
- Implemented error handling, data validation, and preprocessing pipelines with Scrapy and SQL Alchemy, reducing inconsistencies by 30% and cutting PostgreSQL query time by 25%.
- Designed and optimized ETL pipelines in Azure Data Factory, automating data flow, reducing manual intervention by 50%, and improving throughput by 25%.
- Processed large datasets with PySpark, Pandas, and NumPy, reducing execution time by 40% and improving ML model performance by 40%.
- Trained and deployed predictive analytics models with advanced feature engineering, improving forecasting accuracy by 15%.
- Delivered AI-powered analytics solutions, enabling business teams to generate actionable insights for strategic decision-making.
- Wrote scalable technical documentation to support maintainability and cross-team knowledge transfer.

- Implemented logging and monitoring solutions with Azure App Insights, enabling proactive issue detection and reducing production incidents by 20%.
- Improved task delivery by 30% and reduced blockers by 10% through Agile sprint management in Jira.
- Implemented data pipelines integrating APIs and streaming sources, enhancing scalability and real-time availability of analytics data.
- Developed automated monitoring scripts in Python to track scraping and ETL health, reducing downtime and failures by 20%.

EDUCATION

University of Bridgeport Master of Computer Science **Connecticut, USA**

ACADEMIC PROJECTS

- **Real-Time Chat Application | ASP.NET Core, SignalR, React, Azure Service Bus**
Built a real-time chat system with WebSockets and SignalR, enabling instant communication across clients. Integrated Azure Service Bus for message delivery and scaling, supporting thousands of concurrent users with low latency.
- **IoT Data Pipeline | Python, Kafka, AWS Lambda, DynamoDB**
Designed an IoT pipeline for streaming device telemetry into Kafka, with AWS Lambda functions for real-time transformation and DynamoDB for scalable storage. Enabled real-time analytics dashboards for device health monitoring.
- **Microservices E-Wallet Platform | .NET Core, Docker, Kubernetes, PostgreSQL**
Developed a cloud-native e-wallet solution using containerized microservices, deployed on Kubernetes. Implemented payment APIs, transaction history, and user authentication. Achieved high availability with auto-scaling and reduced downtime.
