

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 3 years of experience in backend development (C#, .Net Core, ASP.Net, MVC) and frontend technologies (React, WPF, Angular, HTML, CSS, JavaScript). Experienced in developing reporting and business intelligence solutions using Power BI, KQL, T-SQL, and C#. Skilled in utilizing hash tables, graphs, trees, and other advanced data structures to solve complex problems and improve application performance. Proficient in Azure and AWS cloud platforms, with expertise in implementing AI-driven solutions. Skilled in Agile methodologies (SCRUM, Kanban) and test-driven development. Experienced in SQL, PostgreSQL, MongoDB, and tools like Visual Studio, Visual Studio Code, Swagger, Postman, Git, and GitHub. Adept at leading projects through the Software Development Life Cycle (SDLC), delivering high-quality technical documentation, and quickly adapting to evolving technologies.

SKILLS

Languages & Frameworks	C#, Python, C++, PySpark, NodeJS, .Net Framework, .Net Core, ASP.Net Web Forms, Object-Oriented Programming (OOPs), DataStructures, Advanced Algorithms, LINQ, Flask
Web Technologies	HTML, CSS, Javascript, PHP, Bootstrap, jQuery, Typescript, React, WPF, Angular
Database & ORM	Microsoft SQL Server, Oracle, MongoDB, Postgre SQL, T-SQL, GraphQL, KQL, Entity Framework
AI Tools/Technologies	AI model development, Predictive Analytics
Azure Services	Azure Data Factory, Azure Synapse Analytics, DataBricks, Functions, Service Bus, PowerApps, Azure Blob Storage, Azure Logic Apps, CosmosDB, Azure App Insights
AWS Cloud	AWS Lambda, S3, Rekognition, DynamoDB, EC2, Step functions, AWS Gateway, IAM
CI/CD & DevOps	Azure DevOps, Jira, Microsoft Team Foundation Server, Docker, NPM
Tools	Visual Studio, Visual Studio Code, Swagger, Postman, PowerBI, GitHub and GIT
Testing Frameworks	NUnit, Jest
Operating Systems	Windows, Linux, MacOS
Soft Skills	Excellent communication and analytical skills, strong problem-solving, effective multi-tasking and timeline management, proven ability to collaborate across team boundaries, quick adaptability to new technologies, skilled in conducting thorough code reviews

EXPERIENCE

Wells Fargo	Las Vegas, NV
Software Engineer	Nov 2024 – Present
- Built a dynamic pricing engine in .NET 8 and MongoDB, enabling flexible, configuration-driven rate logic and versioned eligibility rules. - Designed scalable RESTful APIs to integrate pricing workflows with booking, return, and audit modules, supporting high-volume external channels. - Integrated Kafka for an asynchronous event handling across services, ensuring decoupled and scalable communication. - Modeled optimized MongoDB document structures to support high-load scenarios and rapid rule evaluation. - Implemented real-time Splunk monitoring with custom alerts and dashboards, reducing pricing mismatches and latency by 35%. - Automated data validation scripts to reconcile backend records with business expectations, improving pricing accuracy and reducing manual QA. - Led regression and bulk scenario testing across large datasets to validate pricing logic during each release cycle. - Applied Dependency Injection to improve test coverage and maintainability through mock-driven unit testing. - Collaborated across Agile teams using Jira and Confluence for sprint planning, backlog grooming, and documentation. - Contributed to a secondary internal data portal project, enhancing dashboard analytics via Power BI and automating ETL workflows using Azure Data Factory. - Collaborated with cross-functional teams to ensure API contracts aligned with third-party partners and regulatory requirements. - Supported audit readiness by versioning pricing rules and implementing traceable config changes for compliance use cases.	

- Optimized MongoDB indexing strategy to handle high-load API bursts during peak loan origination traffic.
- Developed and executed bulk testing suites that triggered pricing API endpoints in parallel, simulating large-scale real-time usage and ensuring consistency underload.
- Automated Kafka-based message publishing during bulk tests to validate downstream workflows, pricing accuracy, and asynchronous event processing across audit and decisioning services.
- Built verification logic against Data Warehouse (DW) to validate backend data synchronization with pricing outcomes and Kafka message consumption.

Capital One
Software Engineer

Las Vegas, NV
Sep 2023 - Oct 2024

- Developed a full-stack microservices-based MVC application using ASP.NET for the backend and WPF for creating rich, interactive user interfaces for Windows desktop applications, delivering seamless user experience and enhancing user satisfaction by 90%.
- Designed and implemented Windows native applications using WPF, improving user interface responsiveness and providing a robust desktop application experience.
- Integrated Docker for containerization, automating deployment and scaling across multiple environments, reducing setup time by 40% and improving infrastructure efficiency by 40%.
- Enhanced an internal organizational portal, implementing features that streamlined workflows and improved operational efficiency, leading to a 50% increase in team collaboration and productivity.
- Created optimized stored procedures in SQL Server and PostgreSQL, streamlining data management processes, reducing data retrieval time by 40%, and enhancing overall system performance.
- Led end-to-end testing of the web applications to ensure cross-functional functionality, identifying and resolving 99% of critical issues before deployment, improving application stability and reducing post-release defects.
- Utilized Alteryx workflows to automate data cleansing and transformation for internal reporting, reducing manual prep time by 40%.
- Created and maintained technical documentation for web and database projects to ensure clarity and ease of maintenance.
- Optimized relational database procedures, ensuring seamless integration across a multi-tier environment, reducing query execution time by 30%.
- Coordinated with cross-functional teams to implement SDLC processes effectively, enhancing project delivery efficiency
- Utilized Jira to manage Agile sprints, track progress, and resolve bugs, leading to a 20% improvement in sprint efficiency and a 60% reduction in project delays.

Billion Apps
Software Engineer

Hyderabad, India
Jan 2021 - Mar 2022

- Developed robust web scraping scripts using the Scrapy framework, handling dynamic content, pagination, and AJAX-loaded pages, achieving a 95% success rate in data extraction.
- Implemented error handling, data validation, and preprocessing with Scrapy's item pipelines and SQL Alchemy, reducing data inconsistencies by 30% and decreasing query execution time by 25% in PostgreSQL databases.
- Built and optimized ETL pipelines with Azure Data Factory, automating data flow and improving scalability, reducing manual intervention by 50%, and enhancing data throughput by 25%.
- Utilized Python libraries such as Pandas, NumPy, and PySpark for preprocessing and distributed data processing, resulting in a 40% improvement in machine learning model performance metrics and a 40% reduction in large dataset processing time.
- Leveraged the scraped data to train predictive analytics models, achieving a 15% increase in prediction accuracy through advanced feature engineering and regular performance tuning.
- Partnered with cross-functional stakeholders to design data workflows aligned with strategic business goals, delivering actionable insights that informed decision-making and improved operational outcomes.
- Connected Databricks to Snowflake for seamless data ingestion, model output storage, and advanced analytics.
- Developed predictive analytics solutions with AI and machine learning models, achieving a 15% improvement in prediction accuracy
- Drafted comprehensive technical documentation to assist in knowledge transfer and project scalability.
- Streamlined task tracking and issue resolution in Jira, boosting delivery speed by 30% and cutting blockers by 10%.

EDUCATION

University of Bridgeport	Master of Computer Science	Bridgeport, CT
Jawaharlal Nehru Technological University	Bachelor of Technology and Science	Hyderabad, India

CERTIFICATIONS

- SnowPro Core Certification
- Certified Databricks Professional
- Associate Microsoft Certified: Azure
- Alteryx Foundational Micro-Credential
