

SHIVATMIKA

SOFTWARE ENGINEER

FL, USA | Mobile: 3864567256 | Open to Relocate | Email: shiva029p@gmail.com

SUMMARY

- Software Engineer with 4+ years of experience designing, developing, and deploying High performance scalable, cloud-native applications using **Java, Spring Boot, Python, Django, Node.js, & AngularJS**, focused on large scale enterprise-grade distributed systems and microservices architecture.
- Specialized in building fault-tolerant **RESTful APIs**, event-driven services, and asynchronous workflows using **Kafka, AWS Lambda, Redis, and Celery**, enabling high-throughput, low-latency data processing for real-time.
- Experienced in integrating **AI/ML and LLM pipelines** into web ecosystems using **Python, APIs, and cloud services (AWS S3, SageMaker, Azure Cognitive Services)** to deliver intelligent, data-driven features.
- Developed responsive front-end interfaces using **React.js, Redux, TypeScript, HTML5, and CSS3**, ensuring accessibility, performance, and seamless user experience across platforms.
- Deployed and managed **CI/CD pipelines with Jenkins, Docker, Kubernetes, and AWS EKS**, implementing continuous delivery, auto-scaling, and zero-downtime rollouts for production workloads.
- Skilled in **Agile Scrum methodologies** with hands-on experience in Jira, Git, and code review workflows, ensuring high-quality, collaborative, and timely project delivery.
- Strong in **debugging, performance tuning, and testing** using JUnit, Mockito, PyTest, & Jest, with proven experience in **SQL, PostgreSQL, MongoDB, & Amazon RDS** to ensure system reliability, scalability, and data consistency.

SKILLS

Programming Languages	Java, Python, C, C++, SQL, TypeScript, JavaScript
Frameworks & Libraries	Spring Boot, Spring MVC, Spring Security, Spring Batch, Hibernate, Struts, Django, Express.js, Angular 12, React.js, Vue.js, Redux, GraphQL
Web Technologies	HTML5, CSS3, Tailwind CSS, Bootstrap, AJAX, jQuery, XML, JSON, RESTful APIs, React Hooks, Material UI, SASS, ES6
Java / J2EE Technologies	Servlets, JSP, JSTL, JDBC, EJB, JTA, Web Services (REST/SOAP), Microservices Architecture, Spring AOP, ORM
Databases	MySQL, PostgreSQL, Oracle SQL, MongoDB, PL/SQL, DynamoDB
AI / ML & Automation	Python ML Frameworks (scikit-learn, TensorFlow, Pandas), LLM Integration, API Automation, Data Pipelines, Celery, Redis
Cloud Platforms	AWS (Lambda, ECS, EKS, S3, API Gateway, CloudWatch), Azure (Cognitive Services, Functions, Blob Storage)
DevOps & Build Tools	Jenkins, Docker, Kubernetes, Maven, Gradle, SonarQube, Kafka, Jupyter, Postman
Testing Tools	JUnit, Mockito, Selenium, PyTest
Version Control & Collaboration	Git, GitHub, Bitbucket, SVN, Jira, Confluence
Servers & IDEs	Apache Tomcat, JBoss, WebLogic, WebSphere, IntelliJ IDEA, Eclipse, Visual Studio Code, Spring Tool Suite (STS)
Methodologies	Agile (Scrum), SDLC, Waterfall
Operating Systems	Windows, Linux, macOS

EXPERIENCE

Software Engineer | JP Morgan Chase, FL

Aug 2024 – Present

- Design microservices-based financial modules using **Spring Boot** and **Hibernate**, implementing secure account management, real-time portfolio monitoring, and automated transaction processing for scalable finance applications.
- Develop interactive dashboards with **React.js, Bootstrap, AJAX, and HTML5** to visualize investment KPIs, risk indicators, and portfolio performance for clients and internal analysts.
- Implement **Spring Security** with **JWT** and **OAuth2** to secure APIs, enforce role-based access, and reduce authentication latency while ensuring compliance with regulatory standards.
- Build **RESTful APIs** in **Spring Boot** integrating **MySQL** and **DynamoDB** for seamless financial data access, efficient transaction queries, and real-time account updates across multiple banking services.

- Configure **Apache Kafka** and **RabbitMQ** for event-driven processing of transaction alerts, fund transfers, and market updates, enabling high-throughput, low-latency communication across distributed services.
- Manage deployments with **Docker** containers and automated **Jenkins CI/CD pipelines**, deploying cloud services on **AWS Lambda** and **S3** with zero-downtime rollouts and versioned release management.
- Conduct unit and integration testing using **JUnit**, **PyTest**, and **Mockito**, ensuring code reliability, detecting regression issues, and maintaining system performance under high transaction volumes.
- Monitor application performance using **AWS CloudWatch** and custom **Spring Boot** metrics, optimizing query execution and microservices response times, reducing latency by **30%** and ensuring seamless portfolio operations.
- Deliver measurable business impact by automating portfolio analysis and risk scoring with **Python (TensorFlow, scikit-learn)**, increasing client advisory efficiency by **25%** and enhancing decision accuracy across high-value financial accounts.

Software Engineer | IBM, India

Jun 2020 – Jul 2023

- Developed **Java Spring Boot–based microservices & Angular 12** front-end modules enabling real-time stock monitoring, automated replenishment, and seamless integration with POS systems, vendor APIs, & distributed retail data pipelines.
- Designed **AI-driven demand forecasting** using **Python, Pandas, & XGBoost**, predicting inventory requirements, minimizing stockouts, optimizing supply chain operations, & improving forecasting accuracy across multiple retail outlets.
- Built **interactive dashboards** with Angular 12, Tailwind CSS, and Material UI, visualizing customer behavior, sales performance, and inventory KPIs to support real-time decision-making and retail performance optimization.
- Developed **RESTful APIs** with **Java Spring Boot** and **PostgreSQL**, integrating Redis caching and MongoDB to enable efficient product catalog retrieval, order updates, and real-time data synchronization across microservices.
- Automated workflows using **Azure Functions** and **Event Grid**, triggering reorder alerts, restock events, and customer notifications to ensure proactive and timely inventory management with minimal manual intervention.
- Configured **Azure Service Bus** and **Kafka** for asynchronous event streaming, enabling real-time communication of promotions, stock updates, and customer interactions across distributed retail microservice ecosystems.
- Managed **cloud deployments** with Docker, Kubernetes, and Terraform, automating container orchestration, scaling microservices dynamically during high-traffic sales events, and maintaining high system reliability.
- Implemented **ETL and model retraining** pipelines using **Airflow and Python**, automating ingestion of sales and inventory data, retraining ML models, and ensuring continuously updated analytics for retail teams.
- Integrated **security and authentication** using **Spring Security, Azure AD, and SAML**, enforcing fine-grained access controls and ensuring data protection compliance with internal corporate and regional standards.
- Performed **automated and end-to-end testing** using **Selenium and Cypress**, validating dashboard responsiveness, API stability, and workflow integrity to maintain consistent and error-free retail operations.
- Monitored **system performance** via Azure Monitor and Application Insights, optimizing API response, database queries, and ML inference times, achieving a 25% improvement in latency and processing efficiency.
- Delivered measurable business value by **increasing inventory turnover by 20%**, improving customer satisfaction, and reducing manual stock management through AI-enabled automation and Java-based scalable architecture.

EDUCATION

Master of Science in Computer Science
University of Central Florida, Florida, USA

Bachelor of Computer Science and Engineering
CVR College of Engineering, Hyderabad, Telangana, India
