SUMMARY

Computer Science graduate with hands-on experience in Python, Flask, SQL, and TensorFlow. Passionate about applying technical skills to support impactful initiatives in AI/ML and software development. Actively seeking opportunities to contribute and grow through meaningful projects.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, Java, SQL, NoSQL
- **Frameworks & Tools:** React, Node.js, Flask, Flutter, Git, Docker, AWS
- **ML & Data:** TensorFlow, PyTorch, Pandas, NumPy, scikit-learn, OpenCV
- **Databases:** MySQL, MongoDB
- **CS Fundamentals:** Data Structures, Algorithms, OOP, System Design

PROFESSIONAL EXPERIENCE

Princeton Smart Engineers

August 2023 – December 2023

Machine learning intern

- Engineered an end-to-end ML-powered **Book Recommendation System** using a dataset of 50K+ books and 250K+ user interactions, enhancing user engagement on a personalized learning platform.
- Built and evaluated a **collaborative filtering model**, achieving **85% precision** and **80% recall**, which significantly improved recommendation relevance and reduced user churn.
- Applied **Grid Search** and **Bayesian Optimization** for hyperparameter tuning, resulting in a **7% performance boost** and a **20% reduction in model training time**.
- Deployed the model through a **Flask-based REST API**, enabling seamless integration into the platform's backend and delivering real-time recommendations with low latency.

Compsoft Technologies

June 2022 – September 2022

Full-Stack Web-Development intern

- Built a **student results management portal** that scaled to support **10,000+ users**, allowing streamlined uploading, tracking, and analysis of academic data across departments.
- Developed responsive, **standards-compliant UI components** with **HTML5, CSS3, JavaScript**, and integrated dashboards using **React.js** for real-time analytics and data visualization.
- Designed and connected **RESTful APIs** using **Node.js and Express**, enabling efficient communication between frontend components and a **MySQL database**.
- Enhanced application performance by optimizing frontend rendering (30% faster load) and backend API efficiency (25% faster queries) using **DOM tuning, lazy loading, and SQL indexing**.

EDUCATION

State University of New York at Buffalo

January 2024 – May 2025

Master of Science in Computer Science and Engineering

Visvesvaraya Technological University

July 2019 – June 2023

Bachelor of Engineering, Major in Computer Science

PROJECTS

Sign Language Recognition Using Object Detection | *deep learning, python, PyTorch, CNN, TensorFlow*

- Designed and implemented a sign language recognition system, achieving 95% accuracy in gesture classification.
- Optimized **CNN, RNN, SSD, and YOLO** models, improving recognition precision by 20% through advanced object detection techniques.
- Deployed the best-performing model using **TensorFlow Lite** for real-time gesture recognition on edge devices.

Underwater Object Detection System | *Python, PyTorch, OpenCV, Flask*

- Developed a deep learning-based system for detecting marine species in underwater images using custom-trained **YOLOv5** and **Faster R-CNN** models.
- Collected and preprocessed data from **UOT32 dataset**, applied data augmentation, and annotated objects for training. Integrated the trained models into a **Flask** backend using **PyTorch**, exposing predictions via **REST APIs**.
- Built a **React.js** frontend to allow users to upload images and visualize detected objects with bounding boxes.
