EDUCATION

University of North Carolina Charlotte
Bachelor of Science in Computer Science

August 2025

PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience in full-stack development, backend engineering, and automation. Skilled in building scalable web applications (Node.js, React, MongoDB, C#), developing REST APIs, and deploying CI/CD pipelines in Azure DevOps. Experienced in integrating third-party APIs, automating workflows with PowerShell and Nextthink, and delivering data-driven solutions with Power BI. Proven track record of creating AI-powered and automation-driven applications that improve efficiency, reduce costs, and enhance user experiences.

WORK EXPERIENCE

First Citizens Bank, System Engineer Intern - Raleigh, NC *May 2025 - August 2025*

Tech Stack: C#, PowerShell, NQL, Azure DevOps, Power BI, YAML/JSON, Git, Nextthink

- Engineered a custom C# DLL integrated with PowerShell and Nextthink, enabling reusable automation functions that streamlined IT workflows across 20,000+ enterprise endpoints.
- Automated enterprise IT operations by developing PowerShell Remote Actions for BitLocker encryption recovery and Office cache clearing, reducing manual effort and downtime.
- Designed interactive Power BI dashboards with percentile-based alerting and outlier detection, improving endpoint latency (RTT) monitoring and cutting IT response time.
- Built CI/CD pipelines in Azure DevOps for version control and automated deployment of scripts and workflows, aligning with SDLC best practices and improving release reliability.

Control Infotech, Cybersecurity Analyst Intern - Morrisville, NC

May 2023 - July 2023

Tech Stack: Python, C, PowerShell, Bash, Microsoft Azure, Linux (Ubuntu)

- Built Python automation scripts and APIs to run vulnerability scans and process results across hybrid Linux/Windows systems, scaling analysis to 200+ environments.
- Engineered backend tools in C and Python for malware analysis and log parsing, improving data processing speed and threat detection accuracy.
- Developed cross-platform automation tools in PowerShell and Bash that ingested Azure resource logs into scalable monitoring frameworks.
- Created custom automation scripts to unify monitoring, compliance, and Azure log ingestion, driving faster data visibility and reporting

PROJECTS

SoundSwipe, Project Lead & Backend Developer

January 2025 - May 2025

Tech Stack: Node.js, Express.js, React, MongoDB, REST APIs, OAuth 2.0, Render, Git

- Architected and deployed a secure Node.js + Express.js backend with OAuth 2.0 authentication and REST APIs, powering seamless integration with the Spotify Web API.
- Developed an AI-driven recommendation engine that adapted to user behavior, generating personalized playlists and reducing manual curation time by 70%.
- Designed and implemented a swipe-based React interface for song discovery, enabling real-time previews and playlist automation across mobile and desktop.
- Integrated MongoDB for persistent user profiles and personalization, while managing Git workflows, Agile sprints, and CI/CD deployment through Render.

Data Integration & Automation Project

April 2022 - August 2022

Tech Stack: Python, R, SQL, SSIS, CloverDX, Linux

- Developed ETL pipelines using SQL and Python, orchestrated with SSIS and CloverDX, to cleanse and integrate 100+ client datasets.
- Automated monthly reporting workflows, reducing manual effort and improving accuracy and scalability.
- Integrated data into POS and reporting systems, driving a 20% improvement in data visualization and accessibility.
- Engineered scalable automation frameworks for reporting and data integration, improving system reliability and performance.
