

# SHRAVIKA REDDY POLLAPALLI

## JAVA FULL STACK DEVELOPER

Email: [shravikareddy83@gmail.com](mailto:shravikareddy83@gmail.com) | Phone: +1 (605)480-3783 | Location: TX

### SUMMARY

- Around 5 years of expertise in Java full-stack development, encompassing comprehensive analysis, design, development, and testing of Java applications.
- Skilled in crafting responsive websites and single-page applications (SPAs) using Angular, React, HTML5, CSS, and Bootstrap.
- Proficient in Angular development, employing TypeScript to create robust SPAs with Directives, Components, Services, Pipes, Observables, and Router features, including advanced utilization of Router Guards and Navigation.
- Demonstrated competence in leveraging open-source libraries such as Angular Material and redux-thunk to tailor applications for specific requirements.
- Applied CSS grid, CSS flexbox, and Media queries to ensure optimal design responsiveness across various devices.
- Utilized Bootstrap framework to expedite development of responsive and mobile-first web applications, adeptly leveraging its grid system, components, and utilities for streamlined UI development and consistent user experience.
- Experienced in customizing Bootstrap themes and stylesheets to align with project specifications, enhancing both user interface aesthetics and experience while maintaining code modularity.
- Proficiency in AngularJS for unique and customized front-end app development, ensuring adherence to MVC design principles.
- Skilled in server-side programming with Node.js, proficiently utilizing NPM modules like Express.js, CORS, BODY-parser, Mongoose, and Json Web Token for efficient development.
- Developed RESTful web APIs using Node.js and Express.js, with expertise in testing APIs using Postman for seamless client-server communication.
- Extensive knowledge of Java SE, including Collections, Threading, and Core Java, coupled with practical experience in Java EE technologies like Servlets and JDBC.
- Employed AWS services such as EC2 for scalable computing power, S3 for scalable storage solutions, and Lambda for serverless computing, showcasing proficiency in cloud-based architecture and development.
- Managed access control and permissions using IAM, ensuring secure and compliant use of AWS resources.
- Utilized RDS for relational database management and EBS for block storage, ensuring efficient data storage and retrieval in AWS environments.
- Proficient in Agile methodologies and experienced in all stages of the Software Development Life Cycle (SDLC), actively contributing to spring/iterations and SCRUM meetings.
- Extensively worked on Spring JDBC, Spring Hibernate ORM, and JPA, ensuring efficient and scalable data management solutions.
- Experienced in database management, including MySQL and MongoDB, ensuring data integrity and efficiency in application operations.
- Skilled in leveraging Node.js and NPM modules such as Express.js, CORS, BODY-parser, Mongoose, and Json Web Token for server-side programming, enabling efficient handling of HTTP requests, data manipulation, and authentication in web applications.
- Utilized Checkmarx for static code analysis to identify security vulnerabilities and ensure code quality in the full stack development process.
- Implemented Snyk to detect and fix vulnerabilities in open-source dependencies across the full stack application.
- Utilized Waterfall SDLC for full stack Java development in projects with well-defined requirements and timelines, ensuring a structured and sequential approach to software development.
- Employed Agile methodologies to enhance flexibility and collaboration in Java-based full stack projects, enabling iterative development, continuous integration, and rapid response to changing requirements.

### TECHNICAL SKILLS

|                               |                                                                                      |
|-------------------------------|--------------------------------------------------------------------------------------|
| <b>Programming Languages:</b> | C, C++, Java, JavaScript, J2EE                                                       |
| <b>Web Technologies:</b>      | HTML5, CSS, JavaScript, Angular, React, node.js, Typescript, jQuery, AJAX, Bootstrap |
| <b>Database:</b>              | MYSQL, MongoDB, SQL                                                                  |
| <b>Frameworks:</b>            | Spring Boot, Spring MVC, Spring Security, Hibernate ORM, JPA                         |
| <b>AWS Cloud Services:</b>    | AWS (EC2, S3, Lambda, IAM, RDS, EBS, Etc.)                                           |
| <b>Tools:</b>                 | Eclipse, GIT, RAD, Visual studio code                                                |
| <b>Security Tools:</b>        | Checkmarx, SNYK.                                                                     |
| <b>Methodologies:</b>         | SDLC, Agile, Waterfall.                                                              |

### EDUCATION

|                                                                                                                                        |                 |
|----------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Master of Science, Information Systems</b><br>Dakota State University, South Dakota, USA                                            | <b>Dec 2023</b> |
| <b>Bachelor of Technology in Electronics and Communication Engineer</b><br>Jawaharlal Nehru Institute of Technology and Science, India | <b>Apr 2019</b> |

### WORK EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                          |

| <b>Java Full Stack Developer</b><br><b>Robosoft Technologies, TX</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Aug-2023 –Current</b> |
| <ul style="list-style-type: none"><li>• Utilized Spring MVC and Hibernate frameworks to facilitate seamless communication with Microsoft SQL Server, optimizing performance and data integrity.</li><li>• Developed responsive and user-friendly UI components using HTML5, CSS, and Angular, ensuring cross-browser compatibility and optimal user experience.</li><li>• Integrated Angular with Spring MVC for seamless frontend-backend communication, leveraging Angular CLI for efficient component creation and Angular Material for unified front-end styles.</li><li>• Developed and maintained advanced reusable UI components using Angular directives (*NgFor, *NgIf, ng-container, ng-template) and TypeScript, adhering to best practices for scalable and efficient Angular applications.</li><li>• Implemented dynamic content generation and data binding in Angular, enhancing the interactivity and responsiveness of the frontend.</li><li>• Utilized JSP and JSTL for server-side rendering and template management, ensuring efficient generation of dynamic web pages.</li><li>• Collaborated with UX/UI designers to implement design specifications and ensure consistency in visual elements and layout across the application.</li></ul> |                          |

- Employed Spring MVC for server-side logic and request handling, ensuring clean separation of concerns and maintainable codebase. Implemented router guards for secure routing and front-end authentication services for user session management.
- Utilized Angular services and dependency injection for efficient data retrieval and manipulation, enhancing the scalability and reusability of code components. Employed Annotations for efficient Object-Relational Mapping (ORM) to streamline database interactions.
- Designed and implemented Data Access Objects (DAO), Models, and Components for consistent data handling. Leveraged Hibernate Criteria API for database querying and performed CRUD operations.
- Implemented form validation using template-driven and reactive forms, ensuring data integrity and user experience. Integrated RxJS with Http Client Module for asynchronous backend requests (GET, POST, PUT, DELETE).
- Developed RESTful web APIs using Node.js and Express.js, ensuring seamless communication between the client and server while adhering to best practices in API design and development.
- Leveraged AWS EC2 instances to deploy and scale Java applications, managing virtual servers for various development and production environments.
- Utilized AWS S3 to store and retrieve application data, including static files, media assets, and backups, ensuring high availability and durability.
- Implemented serverless functions using Lambda, enabling event-driven Java code execution without managing servers, ideal for microservices and automation tasks.
- Utilized Git for version control and collaboration, ensuring codebase integrity and team coordination.

**Java Full Stack Developer / Associate Software Engineer**  
**Legato Health Technologies LLP, India**

**Sep 2020- Jul 2022**

- Spearheaded the development of backend server functionalities using Spring Boot, meticulously architecting various layers including entity/model, DAO/repository, Controller, Service, Business, and Persistence to ensure scalability and maintainability.
- Played a pivotal role in database design and management, leveraging Hibernate (ORM) for seamless integration and optimal performance.
- Orchestrated the implementation of authentication mechanisms, configuring spring to accommodate custom Jwt Token Provider and seamlessly incorporating JwtFilter while adhering to global CORS requirements.
- Developed responsive and user-friendly UI components using HTML5, CSS, ensuring cross-browser compatibility and optimal user experience.
- Implemented dynamic content generation and data binding in React, enhancing the interactivity and responsiveness of the frontend.
- Utilized JSP and JSTL for server-side rendering and template management, ensuring efficient generation of dynamic web pages.
- Integrated React with Spring MVC for seamless communication between the frontend and backend, enhancing the overall performance and functionality of the application.
- Collaborated with UX/UI designers to implement design specifications and ensure consistency in visual elements and layout across the application.
- Employed Spring MVC for server-side logic and request handling, ensuring clean separation of concerns and maintainable codebase.
- Utilized React services and dependency injection for efficient data retrieval and manipulation, enhancing the scalability and reusability of code components. Applied common design patterns to enhance software architecture and functionality.
- Initiated frontend development using React, employing React Class Components for state management and ensuring a responsive user interface.
- Implemented redux for centralized state management, particularly focusing on user authentication and authorization to enhance security and user experience.
- Leveraged the latest features of React Hooks to refactor and streamline frontend codebase, resulting in a significant reduction in code complexity and improved maintainability.
- Developed web applications utilizing cutting-edge React features centralized with Hooks, ensuring compatibility and future scalability.
- Re-engineered frontend authentication using native React Context and React. Use Context, enhancing code clarity and simplifying state management.
- Integrated Reach/Router for efficient client-side routing, optimizing navigation and user experience.
- Employed node/sass for rapid frontend development, enhancing productivity and code organization.
- Incorporated the latest ES6 features including let, const, and arrow functions to enhance code readability and maintainability.
- Managed AWS resources and services for deployment, scaling, and monitoring of applications. Managed the design and maintenance of Git repositories, implementing best practices to ensure code integrity and version control.
- Orchestrated the integration of AWS cloud services, leveraging scalable solutions such as Amazon EC2 and S3 for efficient storage and compute resources.
- Actively participated in agile methodology for application development, engaging in daily SCRUM meetings to foster collaboration and streamline development processes.

**Java Developer**  
**Dixon Technologies, India**

**Jul 2018- Aug 2020**

- Developed and maintained Java applications, conducting thorough unit tests and resolving production environment configurations to ensure optimal performance.
- Developed and implemented responsive web designs using HTML5, CSS3, and JavaScript, ensuring cross-browser compatibility and optimal user experience.
- Integrated RESTful APIs and web services with front-end components using AJAX and Axios, enabling seamless data exchange and real-time updates.
- Designed and implemented microservices architecture using Spring Boot and Spring MVC, leveraging NoSQL databases for scalability and flexibility.
- Developed responsive web applications with React, implementing dynamic user validations and rendering JSON data from RESTful services for a seamless user experience.
- Initiated frontend development using React, employing React Class Components for state management and ensuring a responsive user interface.
- Leveraged React lifecycle methods to optimize performance and enhance user interactions, ensuring smooth rendering and efficient resource utilization.
- Utilized Spring Batch framework for batch processing tasks, enhancing various business capabilities and improving overall system efficiency.
- Transitioned from React class components to functional components, leveraging Hooks such as use State, use Effect, use Reducer, and useRef for efficient state management and improved code reusability.
- Managed MongoDB databases, including schema design, transactions, and indexing, to ensure data integrity and performance.
- Implemented logging and debugging using Log4j, ensuring application stability and performance under varying conditions.
- Configured AWS CloudWatch monitoring and logging for Java applications, tracking performance metrics, and diagnosing issues for optimization.
- Engaged in the Software Development Life Cycle (SDLC) to design, develop, and maintain full-stack Java applications, ensuring alignment with project requirements and timelines.
