

SHREELAASYA VEJANDLA

Java Full Stack developer

Seattle, WA Open for relocation to San Francisco, CA Dallas, TX Chicago, IL New York city, NY

(937) 972-6078 | vshreelaasya5@gmail.com | <http://www.linkedin.com/in/shreelaasya>

SUMMARY

Java Full Stack Developer with 5 years of experience building scalable, cloud-native applications using Java, Spring Boot, React, and AWS. Skilled in developing fault-tolerant microservices, secure APIs, and full-stack solutions across FinTech and enterprise systems. Strong in both frontend (React, Angular) and backend (Spring, Node.js) development, with expertise in cloud infrastructure, CI/CD, and DevOps tools like Docker, Kubernetes, and Terraform.

PROFESSIONAL EXPERIENCE

Software development engineer 2, Amazon

December 2024 - Present | Seattle, WA

- Developed fault-tolerant microservices in Java 17 using Spring Boot, applying best practices for stateless design, RESTful APIs, and efficient object mapping with Jackson.
- Designed and deployed an automated XML-to-S3 pipeline via Spring Boot microservices, reducing manual handling by 70% and securing seamless API Gateway integration.
- Architected robust error-handling frameworks with retry logic, rollback support, and real-time transaction status tracking, reducing system failures by 60%.
- Built DynamoDB-backed batch processors with efficient read/write patterns and transactional integrity, optimized cost and latency with conditional writes and pagination.
- Integrated AWS Lambda for stateless orchestration tasks and S3 for secure invoice XML storage, improving reliability and throughput.
- Led a cross-functional initiative involving Finance and Tax teams to optimize invoice tax validation, resulting in 50% reduced processing time and 99.9% accuracy across \$320M+ in annual transactions.
- Managed CI/CD pipelines with Maven, Git, and AWS CodePipeline, enforcing automated builds, unit/integration tests, and rollback-ready deployments.
- Employed TDD/BDD principles using JUnit, Mockito, and Postman for test automation and contract testing, achieving over 90% code coverage.
- Applied security best practices: IAM role-based access, S3 bucket policies, and VPC gateway endpoints, ensuring compliance with internal audit standards.
- Spearheaded cross-team technical reviews, authored architectural documentation, and aligned system goals with business stakeholders for a zero-critical-defect launch.
- Tuned memory usage and JVM parameters for optimal GC throughput; improved request latency under load by 35% through performance profiling.

Software Engineer (Full Stack), Mastercard

December 2023 – December 2024 | Seattle, WA

- Architected the Secure Financial Transactions platform using a microservices-based approach leveraging Spring Boot Microservices, Service Registry (Eureka), and Circuit Breaker (Hystrix) to ensure fault tolerance and dynamic service discovery.
- Developed secure RESTful APIs using Spring Boot and integrated them with OAuth2.0 and JWT for authentication and authorization, ensuring secure communication between services.
- Built core functionalities for account management and transaction processing using Java, Spring Cloud, and Hibernate, optimizing data access and transaction management across MySQL and MongoDB databases.
- Enhanced frontend user experience by developing interactive web components using React, while ensuring responsive and accessible designs with HTML5, CSS3, and JavaScript.
- Implemented CI/CD pipelines using Jenkins and Maven, enabling automated testing and seamless deployments on Azure cloud platforms.
- Containerized microservices using Docker and managed their orchestration with Kubernetes, enabling scalable deployments and automated rollbacks in case of failures.
- Collaborated in an Agile environment using Scrum methodologies and tools like JIRA to manage sprints, track progress, and deliver features incrementally.

Java Full Stack Developer, Dell Inc

March 2019 – July 2022 | Hyderabad, India

- Led the backend development using Java, Spring Boot, and Spring Cloud, implementing microservices for transaction monitoring, data processing, and alerting.
- Designed and implemented RESTful APIs with OpenAPI/Swagger for inter-service communication, ensuring seamless integration across multiple services.
- Integrated machine learning models trained for anomaly detection into the system, utilizing a hybrid approach of rulebased and statistical methods.
- Developed and deployed microservices in a Kubernetes cluster, leveraging Docker for containerization and Jenkins for automated CI/CD pipelines.
- Managed real-time data ingestion and processing using Kafka and integrated data storage solutions including PostgreSQL and MongoDB for transactional and NoSQL databases.
- Collaborated closely with cross-functional teams using Agile (Scrum) methodologies, coordinating sprints and managing tasks with JIRA.
- Reduced fraudulent transactions by 30% within the first six months of deployment, enhancing the accuracy of fraud detection models.
- Achieved a 99.9% up time for the fraud detection system, even during high transaction volumes, by optimizing microservice scalability and container orchestration.
- Improved transaction processing speed by 15% due to streamlined API integrations and reduced false positive rates by 20%, leading to better customer satisfaction.

TECHNICAL SKILLS

Programming Languages: Java 17, JavaScript, TypeScript, SQL, Python

Back-End Frameworks & Libraries: Spring Boot, Spring Cloud, Hibernate, Angular, React, Node.js, JUnit, Mockito, OpenAPI/Swagger

Web Technologies & Front-End Tools: HTML5, CSS3, JSON, Responsive Web Design, Accessibility (ARIA), Cross-Browser Compatibility

Microservices & Architecture: Spring Boot Microservices, API Gateway, Service Registry (Eureka), Circuit Breaker (Hystrix), Docker, Kubernetes, Helm, API Versioning

APIs & Integrations: RESTful API Design, OpenAPI/Swagger, OAuth 2.0, JWT, Secure API Design, Contract Testing

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB

Cloud Platforms: AWS (EC2, S3, RDS, Lambda, API Gateway, IAM, CloudWatch), Azure, GCP

DevOps & Tools: Docker, Kubernetes, Jenkins, Maven, Git, GitHub, AWS Code Pipeline, Terraform, SonarQube, REST Assured, Postman

Monitoring & Observability: Log4j2, AWS CloudWatch, Prometheus, Grafana, Custom Dashboards

Security Practices: IAM Role-Based Access, OAuth 2.0, JWT, Encryption at Rest, Secure Coding (OWASP Top 10), API Gateway Policies

Development Methodologies: Agile (Scrum), CI/CD, TDD, BDD, Microservices, Cloud-Native Architecture

Tools & Environments: IntelliJ IDEA, Visual Studio Code, JIRA, GitLab, Bitbucket

Soft Skills: Problem Solving, Technical Documentation, Cross-Functional Collaboration, Mentorship, Stakeholder Alignment, Time Management, Code Reviews, Continuous Learning, Zero-Defect Delivery Focus

EDUCATION

University Of Missouri, Kansas City, USA

Master of Science in Computer Science

Qis College of Education, India

Bachelor of Technology in Computer Science
