SUMMARY

Full stack developer with 3+ years of experience in Java, Javascript, and modern frameworks. Reduced deployment times by 20% through the streamlining of CI/CD pipelines using Jenkins, Docker, and Kubernetes, accelerating software release cycles and increasing engineering velocity. Built 5+ RESTful APIs with Spring Boot with clearly documented API endpoints using Swagger, enabling seamless data exchange with external systems, which was more than any other developer. Earned a promotion from Software Developer to Full Stack Java Developer within 3 years because of contributions to code quality, test coverage, and knowledge sharing across the team.

SKILLS

Frameworks & Tools: Spring Boot, Angular, JSP, Servlets, React JS, Android Studio, VS Code, Eclipse, GitHub, Docker, Kubernetes

CI/CD Tools: Jenkins, Electric Flow, TeamCity, and Bamboo

Cloud Technology: AWS (Lambda, EC2), Serverless Architecture

Web Technologies: HTML, CSS, jQuery

Methodologies: Agile, Scrum, Kanban, Waterfall

Languages: Java, SQL, JavaScript, TypeScript, C

Web Servers & Services: Tomcat, REST/SOAP (JSON/WSDL/XML), Apache, Node.js, Microservices

Databases: MySQL, Hibernate, Oracle, MongoDB, SQL Server, SSIS, Report Builder

Visualization Tools: Tableau, Power BI, MS Project, MS Access, Maven

EXPERIENCE

Full Stack Java Developer, 01/2024 - Current

TIAA – USA

- Collaborated with UI/UX designers to integrate front-end components using Angular and React JS, improving user interfaces and reducing task completion times by 10%.

- Enhanced database query efficiency by refactoring existing SQL queries; streamlined data retrieval processes enabled the reporting team to generate insights with reduced latency of up to 40%, improving decision-making speed.
- Engineered a robust data validation framework leveraging JUnit and Mockito, decreasing data-related defects in production by 25% and enhancing data integrity. Designed and developed 20+ front-end and back-end applications utilizing ReactJs, Node.js, and TypeScript. Developed 10+ new application features and distributed services that support high-scale applications. Worked with Agile team across 4+ application domains.
- Implemented a continuous integration/continuous deployment (CI/CD) pipeline using Jenkins and Docker, automating the build, test, and deployment processes; this reduced deployment time by 60%.
- Designed and implemented a real-time data streaming pipeline using Kafka and Apache Spark, processing over 500,000 events per minute for fraud detection and security threat analysis.
- Standardized coding practices, performed code reviews, and mentored 5+ junior developers on Java best practices, improving code quality and reducing bug counts in the application.

Software Developer, 01/2021 - 06/2022

National Small Industries Corporation Limited – India

- Resolved software defects through systematic debugging, collaboration with QA teams to reduce production issues by 10% over six months.
- Refactored the core application's data access layer, improving code maintainability and reducing technical debt by 20% while ensuring zero downtime during the transition.
- Automated the build and deployment process with Ansible, decreasing the time spent on manual deployments by 70% and enabling faster iteration cycles for the development team.
- Containerized and orchestrated applications using Kubernetes, streamlining application management and improving resource utilization across the infrastructure; project took 14 days.
- Collaborated with the cybersecurity team to implement security best practices, addressing active key vulnerabilities; enhanced application security and reduced potential risks.

EDUCATION

Masters: Computer Science, 05/2024

University of Memphis - Memphis, Tennessee
