EXPERIENCE

CrowdDoing

Remote

Software Engineer

Jan 2025 – Present

- Developed **React Native** interfaces for the Nature Counter app, optimizing performance and accessibility for **15K+ users**.
- Led end-to-end development of the **Group & Sharing feature**, **designing its architecture** and technical roadmap to enhance community resource sharing, boosting **user engagement by 30%**.
- Streamlined deployment processes by automating code updates via GitHub Actions, reducing manual intervention and improving deployment efficiency in **CI/CD pipelines**.

IBM Research

Albany, NY

Software Engineer (Capstone Project)

Aug 2024 – Dec 2024

- Built a Multimodal User Profile Generation System leveraging **GPT-4, LangChain, RAG, and OpenAI API** to deliver personalized career insights via multimodal data analysis and **prompt engineering**.
- Integrated external **APIs** and optimized **MongoDB storage**, increasing job recommendation accuracy by 73.4%.
- Built robust **backend pipelines** using Python and API integrations (e.g., Proxycurl, SerpAPI) to automate ingestion and **cleaning of unstructured data**, enforcing validation layers to maintain high data quality across the platform.

NYS Office of Technology

Albany, NY

Software Engineer Intern

Nov 2023 - Aug 2024

- Automated HR tasks with **RPA(UiPath)**, increasing operational efficiency by 35%. Integrated with Microsoft Azure Active Directory (**Azure AD**) for secure authentication and access management.
- Developed **C#.NET scripts** and integrated with third-party systems through **API communication**.
- Enhanced data extraction and manipulation by writing **SQL queries** and using **Microsoft SQL Server**.

TECHNICAL SKILLS

Languages/Skills: Java, SQL, Python, JavaScript, HTML, CSS, C#.NET

Databases: MongoDB, Microsoft SQL Server, PostgreSQL, Oracle SQL, AWS S3

Tools/Frameworks: Git, REST, UiPath, Docker, React, Langchain, Streamlit

EDUCATION

Georgia Institute of Technology

Online Master of Science, Computer Science

Jan 2025 – Dec 2026

University at Albany (SUNY)

Bachelor of Science, Computer Science

Aug 2021 – Dec 2024

PROJECTS

Secret Gift Giving Application (React, Node.js, MongoDB, HTML/CSS, JavaScript, REST)

- Designed and developed a full-stack web app for anonymous gift exchanges, incorporating features like user authentication, group creation, and randomized gift assignment.
- Developed a secure Node.js backend with Express.js and RESTful APIs, ensuring seamless client-server communication.
- Designed and normalized MongoDB schemas for efficient data storage and retrieval.

Shank Language Compiler (Java, OOP)

- Engineered a recursive descent parser, lexer, and interpreter to compile and execute Shank language scripts.
- Designed a finite state machine (FSM) for lexical analysis, achieving 95% accuracy in token classification.
- Applied OOP principles and design patterns to build a modular, extensible architecture, enhancing maintainability.
