

Shreya Reddy Lethakula

Product Analyst

Email: shreyareddylethakula1431@gmail.com | Contact: 4258777159

LinkedIn: <https://www.linkedin.com/in/shreya-lethakula-9a6593220/>

Professional Summary:

- Product Analyst with 2+ years of experience delivering actionable insights, experimentation strategies, and product recommendations that enhance user engagement, retention, and revenue across Financial Services, Retail, and Marketing industries.
- Proven expertise in data-driven decision-making, uncovering user needs, optimizing product performance, and influencing roadmaps by blending quantitative analytics, qualitative research, and stakeholder collaboration.
- Skilled in A/B testing, hypothesis testing, funnel optimization, and cohort analysis, ensuring feature launches and product strategies are validated with statistically rigorous insights.
- Designed and implemented retention and churn models (DAU, MAU, CLV, NPS tracking) to predict customer behavior, leading to targeted interventions that reduced churn and increased engagement.
- Proficient in SQL (advanced joins, CTEs, window functions), Python (Pandas, NumPy, SciPy), and Excel for extracting, analyzing, and visualizing complex datasets, ensuring data accuracy and reproducibility.
- Experienced in building real-time dashboards and self-service analytics solutions using Tableau, Power BI, Google Analytics, Looker, and Amplitude to empower leadership and cross-functional teams with actionable KPIs.
- Collaborated with Product, UX, Engineering, and Marketing teams to translate customer feedback into product requirements, write detailed PRDs and user stories, and manage sprints in Agile/Scrum environments.
- Hands-on experience with Product board, JIRA, Confluence, Trello, Figma, and Miro for feature prioritization, wireframing, sprint planning, and stakeholder alignment.
- Conducted customer journey mapping, persona development, and usability testing to bridge the gap between product strategy and user experience, resulting in measurable improvements in satisfaction and adoption.
- Applied statistical modeling, regression analysis, and time series forecasting to evaluate product adoption trends, optimize pricing strategies, and guide long-term product planning.
- Leveraged Natural Language Processing (NLP) with LLMs (BERT, GPT) to analyze customer feedback, reviews, and support tickets, enabling sentiment tracking and actionable roadmap insights.
- Strong foundation in ETL pipelines, automation, and data warehousing using Snowflake, AWS (S3, Redshift, SageMaker), Azure (Data Lake, ML), and Databricks, ensuring scalable and efficient analytics workflows.
- Experienced in API integration and product instrumentation, ensuring robust data collection and accurate event tracking across digital platforms.
- Designed and monitored feature flag rollouts, canary releases, and experimentation pipelines, ensuring safe product delivery with minimal risk.
- Adept at churn detection and fraud signal identification by applying anomaly detection and clustering techniques (K-Means, DBSCAN, Logistic Regression), feeding insights into product-level safeguards.
- Delivered 20% improvement in feature adoption, 18% reduction in drop-offs, and 14% lower churn by combining behavioral analysis with targeted product interventions.
- Recognized for clear communication and storytelling skills, presenting complex analytical insights to executives and non-technical stakeholders through data visualizations, dashboards, and business narratives.

- Skilled in Agile methodologies (Scrum, Kanban) and SDLC processes, ensuring structured delivery of product initiatives in fast-paced, high-growth environments.
- Highly motivated, detail-oriented, and customer-focused professional, combining strong analytical rigor, technical expertise, and business acumen to deliver products that maximize customer value and business impact.

Technical Skills:

- **Programming & Data Analysis:** Python (Pandas, NumPy, SciPy), SQL (MySQL, PostgreSQL, Redshift, Snowflake), R, Excel
- **Analytics & Experimentation:** A/B Testing, Cohort Analysis, Funnel Analysis, Retention Modeling, KPI Tracking, Hypothesis Testing, Regression Analysis, Time Series Forecasting
- **Business Intelligence & Visualization:** Tableau, Power BI, Looker, Google Analytics, QuickSight, Matplotlib, Seaborn
- **Data Warehousing & Processing:** Snowflake, AWS Redshift, Teradata, Apache Spark, PySpark
- **Cloud Platforms & Tools:** AWS (S3, SageMaker, RDS), GCP, Azure Data Lake
- **Product & Collaboration Tools:** JIRA, Confluence, Product board, Figma, Miro, Trello
- **CI/CD & Workflow Automation:** GitHub, Jenkins, Airflow, Docker
- **Web & API Knowledge (Basic):** HTML, CSS, JavaScript, RESTful APIs, Flask
- **Machine Learning (Applied to Product Analytics):** Regression, Classification, Clustering, NLP, Sentiment Analysis, Customer Segmentation, LLM Applications (HuggingFace, LangChain, GPT)

Education:

Master of Computer Science, University at Albany (SUNY), Albany, NY | 2022 – 2024

Focused on Data Analytics, Machine Learning, and Software Development with hands-on projects in Python, SQL, and Cloud-based technologies.

Professional Experience:

Client: Fiserv | Milwaukee, Wisconsin (Remote)

Jan 2025 – Till Date

Role: Product Analyst

Responsibilities:

- Analyzed behavioral data using **SQL** and **Google Analytics** to identify drop-offs in digital claims workflows, informing sprint planning and enabling targeted interventions that **reduced abandonment rates by 18%**.
- Translated **Voice of Customer** insights into **PRDs** and detailed **user stories** in collaboration with Product, Design, and Support teams, resulting in a **20% increase in CSAT**.
- Designed, executed, and analyzed **A/B tests** for a smart quoting feature, ensuring **statistical rigor**, which **improved feature adoption by 20% within 6 weeks**.
- Performed **cohort-based churn and retention analyses** using **Python (Pandas, NumPy)**; insights drove strategic interventions leading to a **14% reduction in churn in Q3**.
- Supported **UX and Compliance teams** with **Figma wireframes** and usability testing; optimized workflows and drove a **22% improvement in task completion rates**.
- Partnered with **Data Engineering** to **automate KPI pipelines in Snowflake**, cutting manual reporting requests by **30%**.
- Developed **real-time Tableau dashboards** for **quote-to-bind and claims metrics**, enabling business leaders to **act on insights 25% faster**.
- Collaborated closely with stakeholders across Product, Engineering, and Operations to align on priorities, ensuring data-driven decisions across multiple initiatives.

Environment: Python, AWS (S3, Lambda, CloudWatch), Snowflake, Tableau, GitHub Copilot, Amazon CodeWhisperer.

Client: Deloitte | Hyderabad, India

April 2020 – July 2022

Role: Product Analyst

Responsibilities:

- Conducted extensive **SQL data mining** on **2.2M+ transaction records**, identifying root causes of ACH transfer failures; corrective measures reduced **processing delays by 15%**.
- Managed post-release **performance evaluation** for a transaction categorization feature by analyzing engagement, funnel progression, and retention over 60 days; identified a **17% increase in active user return rates**.
- Partnered with **Product Managers and Engineering teams** to define critical **error-handling use cases for public-facing APIs**, resulting in a **24% reduction in partner-reported integration issues and support tickets**.
- Directed the **launch of a real-time payment reconciliation tool** by gathering requirements across Finance, Operations, and Engineering teams; achieved a **35% reduction in client reconciliation time**, improving cash application cycles.
- Designed and built **interactive Power BI dashboards** for module adoption metrics, **user NPS trends**, and churn signals; dashboards drove **data-informed prioritization** in quarterly roadmaps.
- Developed **Python automation scripts** to streamline weekly reporting of product engagement metrics, saving **5+ manual analyst hours per week** and improving report accuracy.
- Collaborated with **Fraud and Risk Intelligence teams** to detect anomalous behavioral patterns, integrating **early warning signals into product workflows**.
- Coordinated and facilitated **User Acceptance Testing (UAT)** across three quarterly releases, gathering feedback from **15+ stakeholders** and ensuring **resolution of 35+ product issues pre-go-live**.
- Drove cross-functional alignment with stakeholders across Product, Engineering, Finance, and Risk teams, ensuring high-quality releases and **measurable business impact**.

Environment / Tech Stack: Python (Pandas, NumPy), SQL, Power BI, Tableau, Figma, Google Analytics.

Certifications:

- Product Analytics Agile Development by University of Virginia (coursera)
- Google Data Analytics Professional Certificate by Google(coursera)
- Introduction to Project Management
- IBM IT Project Manager Professional Certificate

Projects:

BOOKNEST

Full-Stack Web Application for Library Management

- Analyzed library operations and designed a scalable system integrating **MySQL, React.js, and Apache Tomcat** to improve workflow efficiency.
- Developed **SQL triggers and stored procedures** to optimize book retrieval and automate operational tasks.
- Improved user experience via **responsive design** and advanced search filters, increasing usability and engagement.
- Ensured data security and integrity with **role-based access control, parameterized queries, and session validation**.

Skills: SQL, React.js, Data Analysis, UX/UI, Security

INVESTIRE

Startup-Investor Connection Platform

- Led front-end analytics design to optimize user navigation and engagement on the investment platform.
- Used **MySQL and REST APIs** to track user behavior and improve system performance for faster decision-making.
- Delivered data-driven insights supporting secure funding decisions, improving overall platform reliability and satisfaction.

Skills: Product Analytics, React.js, SQL, REST API, User Experience

LEASEHUB

Property Rental Management Platform

- Conducted market and user behavior analysis to design advanced search and filtering features for tenants.
- Implemented **secure payment and communication systems**, improving trust and transparency between landlords and tenants.
- Enhanced platform usability, resulting in streamlined property management and tenant satisfaction.

Skills: Product Management, Python, JavaScript, React.js, Data Analysis

PREDICTION OF CYBER HACKING BREACHES

Machine Learning Model for Cybersecurity Risk Assessment

- Developed predictive analytics model using **probabilistic techniques and multivariate analysis** to identify potential cybersecurity breaches.
- Provided actionable insights on attack patterns, enabling proactive mitigation strategies.
- Translated complex data into clear recommendations for improving organizational security measures.

Skills: Python, Machine Learning, Data Analytics, Risk Assessment
