Upcoming December 2025 graduate (B.S. Computer Science + Statistics, UIUC) seeking full-time Software Engineer roles. Strong background in **Java, Python, C/C++**, and **JavaScript/React** with proven experience in backend/API development, test automation, cloud computing (AWS Certified), and delivering **scalable, customer-focused applications**.

EDUCATION

University of Illinois at Urbana-Champaign

Champaign, IL

Bachelor of Science in Computer Science + Stats 3.85 GPA

August 2023 – December 2025

Relevant Coursework: Data Structures, System Programming, Computer Architecture, Linear Algebra, Statistics and Probability I, Numerical Methods, Algorithms & Models, Data Management, Statistical Modeling II, Database Systems, Progrmg Languages Compilers, Statistical Computing

AWS Cloud Practitioner Certified

AWS

October 7th

EXPERIENCE

Software Engineer Intern

July 2025 – Aug 2025

American Medical Association

Chicago, IL

- Contributed to **high-reliability web applications** including AMA Member Onboarding Flow and Join/Renew portal used by thousands of members.
- Designed and implemented **testable, maintainable UI and API automation** with **JavaScript (Testim)** and **Postman** collections, increasing regression coverage to **80%+**.
- Conducted **end-to-end performance testing (JMeter)** to improve **scalability** and response times of membership flows
- Ensured accuracy of **customer analytics** by validating **Google Analytics tags** and cookie/session tracking.
- Actively collaborated in **Agile sprints** with engineers, participating in **daily standups, code reviews, and bug triage**.

Machine Learning Intern

June 2023 – September 2023

University of Illinois at Chicago

Chicago, IL

- Enhanced **BERT-based NLP models** for stance detection on large-scale Twitter datasets, improving **classification accuracy**.
- Wrote **Python pipelines** for text preprocessing, model evaluation, and experimental data analysis.
- Partnered with researchers to identify failure cases and provide **debugging insights** to retrain models more effectively.

PROJECTS

AI Personal Trainer App | *Python, SwiftUI, Flask, OpenAI, JSON, Postman*

March 2025 - May 2025

- Developed a robust **Python** backend that leverages ChatGPT via **OpenAI API** to generate personalized workout plans based on user inputs, employing advanced **prompt engineering** and **JSON** extraction to ensure clean, valid outputs.
- Developed **iOS front-end (SwiftUI)** for seamless user experience; integrated with backend APIs for **real-time plan generation**.
- Demonstrated strong **customer-focused design**, substituting high-impact workouts with safer alternatives.
- Used **Postman** to test and document requests between the SwiftUI client, Flask backend, and OpenAI API, validating payload structures, headers, and status codes to ensure maintainable and reliable API design.

PrizePicks Model | *Python, JavaScript, Flask, React, Pandas, SQLite, Selenium*

January 2024 – May 2024

- Designed an **interactive Flask + React frontend** to present player odds and over/under predictions clearly to users.
- Implemented **statistical modeling (Poisson distribution)** with real-time NBA API data for predictive analytics.
- Automated web scraping with **Selenium**, bypassing anti-scraping measures to collect data and feed the prediction engine.
- Delivered a **scalable, maintainable full-stack application** integrating backend logic, data storage, and UI.

TECHNICAL SKILLS

Languages: Python, Java, C/C++, R, JavaScript, HTML/CSS, Typescript, SQL, OCAML

Developer Tools: Git, Docker, VS Code, RStudio, Jupyter Notebook, Terraform, Testim, Postman, Google Analytics, Jira

Libraries: pandas, ReactJs, sqlite3, Matplotlib, scipy, numpy

Frameworks/Methodologies: Agile, Kanban, Waterfall, DevOps, AWS, RESTful APIs
