

Shrushti Rudrawar

☎ 682-392-4333 ✉ s.rudrawar29@gmail.com [in LinkedIn](#) [Portfolio](#)

Education

University of Texas at Arlington

Master of Science in Data Science

January 2023 – December 2024

Arlington, TX

Technical Skills

Programming Languages: Python, Java, C++, MySQL, R

Tools & Technologies: Git, Smartsheet, Sharepoint, Abinitio, JIRA, VS Code, Eclipse, Android Studio, Advanced Microsoft Excel tools(VLOOKUP, PivotTables), Jenkins, Jupyter Notebook, DBMS

Data Science: Supervised/Unsupervised Learning, NLP, Statistical Analysis, A/B Testing, Regression Analysis

Data Visualization : Tableau, Power BI, Matplotlib, Seaborn

Cloud and Big Data: Azure, AWS, HDFS, PySpark, Scala, Hadoop, Firebase, GCP

Certifications: Data Analyst Path on LinkedIn, Machine Learning with AI using python on Coursera(deeplearning.ai, Stanford), Microsoft Power BI Data Analyst

Work Experience

Business Intelligence and Data Analyst Intern

May 2024 – August 2024

WEIR ESCO

Portland, OR

- Constructed SQL-based data infrastructures and optimized ETL workflows, enhancing data accuracy and boosting operational efficiency across processes
- Created Power BI dashboards to monitor critical business metrics, empowering cross-functional teams with data driven insights, which elevated project efficiency by 15%
- Spearheaded the Heat Treat Cycle Detection project, building time series data pipelines and implementing machine learning to reduce production defects by 20%

Data Analyst - Capital Market

June 2021 – January 2023

FIS Global

India

- Leveraged Python for data manipulation, accelerating data processing and providing stakeholders with timely insights
- Improved team and client collaboration using JIRA and Excel, optimizing project delivery and client satisfaction through thorough reviews of data files and operational processes
- Ensured data integrity with SQL Server Management Studio, achieving a 98% reduction in discrepancies and a 99% increase in query accuracy through rigorous unit testing

Data Analyst Intern

April 2021 – June 2021

Etech Global Services

India

- Coordinated with client teams to integrate insights into retention strategies, elevating customer experience metrics and engagement levels
- Developed machine learning models to analyze customer behavior patterns, enhancing predictive accuracy by 18% and providing actionable insights for marketing strategies
- Spearheaded data-driven initiatives to integrate AI-driven tools into the customer service process, achieving a 25% reduction in response times and a 10% improvement in customer retention rates

Projects

Heat Treat Cycle Detection | *Time Series Analysis*

- Engineered and preprocessed time series data to identify key patterns and features critical for accurate cycle detection
- Applied advanced time series analysis techniques, achieving high precision in detecting cycle deviations
- Developed a machine learning model to detect anomalies in heat treat cycles using time series data, enhancing process control and reducing production defects

Amazon-Themed Sales Dashboard Using Power BI | *Data Visualization*

- Launched a Power BI dashboard that enhanced regional targeting efficiency by 15% through real-time data analysis
- Consolidated data from multiple sources, applying rigorous data cleaning techniques to ensure 100% accuracy and reliability, which enhanced data integrity and supported precise business decision-making
- Devised calculated metrics and KPIs using DAX functions to highlight trends and top-performing regions, aiding executive decisions

Risk Scoring Model for Breast Cancer Using Tumor Characteristics | *AI & Machine Learning*

- Achieved 92% accuracy in predicting malignancy by developing a machine learning model, significantly aiding early diagnosis efforts and contributing to improved treatment planning for patients
- Engineered key clinical features to enhance model precision by 20%, ensuring that risk assessments were accurate and reliable, effectively supporting critical healthcare decision-making processes
- Evaluated model performance using ROC and AUC metrics, optimizing model selection and enabling more accurate predictions, ultimately streamlining early cancer detection initiatives for healthcare provider
