WORK HISTORY

Amazon (AWS Managed Services) | Cloud Operations Engineer

April 2022 – December 2022

- Executed and monitored seamless project migrations to the cloud, ensuring a flawless 100% implementation rate.
- Orchestrated resource deployments and updates as an Operations Engineer, ensuring the seamless maintenance of DevOps CI/CD pipelines for optimal software delivery for over 100 requests.
- Successfully deployed resources to all requested accounts by the customer, at times more than 20 accounts simultaneously.
- Participated in scheduled regular maintenance using DevOps automation, including patching, service updates, and config compliance, impacting up to 200 instances.
- Handled over 200 alerts and incidents created for infrastructure vulnerabilities and issues.
- Implemented modifications to IAM policies and roles, enhancing user access while strictly maintaining security standards, thus mitigating vulnerabilities, and ensuring 100% compliance.
- Led as primary, ensuring 100% timely completion of incoming cases and scheduled maintenance, delegating tasks to other sites when team bandwidth was limited.

Amazon Web Services | Cloud Support Engineer

July 2019 – April 2022

- Managed and resolved over 1000 production issues for Relational Database Service ensuring SLA agreements were met within 15 minutes, maintaining high customer satisfaction.
- Collaborated with customer teams to devise tailored solutions for database optimization, sometimes resulting in a 200% increase in query speed and halved resource utilization.
- Solved 25 internal tickets raised for dive-deep analysis of customer issues and successfully drove them to resolution.
- Guided and trained team members, new hires, and customers on product-related queries through quarterly 2-day training sessions, totaling 8 training days annually.
- Secured 100% database availability by supporting Infrastructure Event Management during product launches and holidays.
- Experienced with a broad array of AWS services such as EC2, RDS, Lambda, VPC, S3, DynamoDB, CloudFormation, RedShift, IAM, and others, demonstrating versatility across the AWS ecosystem.
- Created Python and JavaScript tools that reduced routine task time from 10-15 minutes to instant, providing immediate reports, case counts, and critical alerts.

Amazon Web Services | AWS Premium Support Intern

February 2019 – July 2019

- Developed an employee productivity tracker utilizing cloud service, designing dashboards with Django to enable comprehensive productivity tracking for engineers with 100% accuracy.
- Crafted insightful dashboards at the site level to give management visibility into the incoming workload, resulting in a 30% acceleration of response times through strategic work prioritization.

TechieAid | Software Development Intern

April 2018 – July 2018

- Worked on an Android application during the internship, implementing efficient message retrieval from mobile devices running the app and ensuring compatibility across three or more Android operating system versions with 100% retrieval rates.

Pramati Technologies | Software Development Intern

January 2018 - February 2018

- Worked on the 'Skills Metrics' project in ASP.Net, which over 500 employees utilized to input their programming skills (e.g., C/C++) and rate their proficiency in those skills to allow management to have stock of their employee skills for future projects.

Academic Project

- Slither (Graduate Project): Resolved critical bugs by implementing custom scripts to optimize the dead-code detector and call-graph printer in Slither, reducing false positives for unused functions along with achieving 100% accurate differentiation of overloaded functions by the printer function.
- Machine Learning Project (Undergraduate Project): designed a 24/7 chat application with web and Android interfaces, enabling patients to communicate securely with mental health experts and integrated advanced sentiment analysis using RNN algorithms to enhance real-time decision-making and monitor treatment effectiveness.

EDUCATION

The University of Texas at Arlington

Computer Science, December 2024

Master of Science in Computer Science, Arlington Texas

RNS Institute of Technology, Visvesvaraya Technological University

Computer Science, July 2019

Bachelor of Engineering, Bengaluru India

TECHNICAL SKILL

Programming Languages: Python, Java, C/C++, Go, HTML5, CSS, PHP, C#, JavaScript (Node, React), Solidity.

SDLC Methodologies: Waterfall, Agile.

Tools/Platforms: Git, ASP.Net, jQuery, asp.net, Slither, Flask, Django, Pandas, NumPy, Scikit-learn

Databases: DocumentDB, MongoDB, MySQL, PostgreSQL, SQL Server, and Aurora

Certifications: Certified AWS Solutions Architect Associate.

Relevant Coursework: Special Topics in Networking, Design, and Analysis of Algorithms, Distributed Systems, Cloud Computing and Big Data, Data Analysis and Modeling Techniques, Artificial Intelligence, and Advanced Topics in Software Engineering.

Networking Fundamentals: Virtual Private Clouds (VPC), routing, firewalls, access lists, VPNs, HTTP/HTTPS, TCP/IP, DNS, load balancing.

Cloud Technologies: AWS Cloud (EC2, RDS, Lambda, VPC, S3, DynamoDB, CloudFormation, RedShift, IAM), Azure Cloud, GCP
