EDUCATION

Kennesaw State University, Marietta, GA

Master of Science in Data Science and Analytics

January 2024 – July 2025

GPA: 4.0

Gujarat Technological University, Surat, India

August 2015 – May 2019

Bachelor of Engineering in Computer Engineering

GPA: 3.46

SKILLS

Programming Skills : Python, R, SAS, SQL, Java, C, C++
NLP & ML Libraries : Hugging Face Transformers, TensorFlow, PyTorch, Scikit-Learn, Pandas, SHAP
Machine Learning : Logistic Regression, Ensemble Methods, Regularized Models, Clustering, PCA
NLP Techniques : Text Classification & Extraction, Summarization, Tokenization, Prompt Engineering, LLM Evaluation, Retrieval-Augmented Generation
Database Systems : MySQL, Microsoft SQL Server, NoSQL, MongoDB
Tools & Platforms : Azure DevOps, Google Cloud Run, AWS, Github, Streamlit, Microsoft Office, Tableau, Power BI

PROFESSIONAL EXPERIENCE

ML/AI Data Analyst Consultant

May 2025 – July 2025

CPRS, Inc. | Python

Bellevue, WA (Remote – Atlanta, GA)

- Designed full-stack AI-powered applications for invoice extraction and document classification using **Gemini and GPT-4o** APIs, with advanced **prompt engineering** and **tokenization** techniques to optimize LLM outputs.
- Implemented **transformer-based pipelines** for multi-page PDF parsing and routing, maintaining **99.99% accuracy** across diverse document types.
- Built scalable preprocessing modules including batch processors, image extractors, parallelization and **LLM feature engineering** tools.
- Deployed the end-to-end NLP app to **Google Cloud Run** using **Azure DevOps**, enabling secure, production-grade delivery of cloud-native AI services.

Graduate Research Assistant

September 2024 – May 2025

Kennesaw State University | Python, SQL

Atlanta, GA

- Built and evaluated **supervised ML models** (SVM, logistic regression) on transaction datasets for erroneous payment detection.
- Conducted vendor analysis revealing that just 0.12% of vendors (top 5) were responsible for 44.4% of duplicate payments, enabling the development of more targeted and impactful auditing strategies.

Data Analyst Intern

May 2024 – August 2024

ProRelevant | Python, R

Atlanta, GA

- Developed propensity models in PyCaret with 94% accuracy, correctly identifying 88% of high-value sellers and driving more effective, data-driven advertising strategies.
- Conducted time series and lag effect analysis using ARIMA, ARDL-DLM, and S-Curve transformations to optimize campaign timing, budget allocation, and customer retention strategies.
- Partnered with cross-functional teams to identify and rectify data discrepancies, utilizing Python and SQL, improving data integrity by 45%.

PROJECTS

Consumer Credit Risk & Response Modeling | Python, SAS

- Developed a weighted multinomial logistic regression model for customer segmentation based on credit response and default risk, enabling differentiated outreach and reducing financial risk exposure.
- Reduced the number of variables from 540 to 40 using variable clustering, improving model efficiency and interpretability.
- Achieved a total profit of \$4.12M by mailing to just 25% of the population.

Predicting Early Hospital Readmission for Diabetic Patients | Python

- Designed logistic regression models to predict 30-day hospital readmission risk in diabetic patients, achieving a 50% reduction in avoidable readmissions.
- Applied clustering techniques and PCA to segment populations based on risk profiles and behavior, enabling more targeted engagement strategies.
