WORK EXPERIENCE

Upreti Capital - (USA, Remote)

March 2025 – Present

Quant Researcher (Confidential Hedge Fund)

- Designed and back-tested quantitative trading strategies using Python, **machine learning** techniques and applied **statistical** analysis, **alpha research**, and financial modeling across multi-asset portfolios.
- Led end-to-end **quant** research and algo development—integrating data ingestion, signal generation and tested over spreadsheets with **execution logic** into production using statistical tools.
- Developed predictive models to estimate borrower default probabilities and segmented customers based on FICO scores using machine learning techniques.

Kantar's GDC (Pune)

Data Analyst

June 2022 - Dec 2024

- Designed and implemented **machine learning** and **deep learning** models to simulate market behavior and predict key financial indicators, enhancing strategic decision-making and contributing to improved model accuracy and business insights.
- Utilized **Excel** and **VBA** to create complex calculation-based sheets, significantly improving efficiency for Market Analysts and facilitating more effective decision-making processes, resulting in a **40% reduction** in analysis time.

EDUCATION

DR DY Patil School of MCA

Pune, India

Master's in Computer Applications

Brihan Maharashtra College of Commerce

Pune, India

Bachelor's in Computer Applications

PERSONAL PROJECTS

FinSentX: Intelligent Sentiment Analytics for Financial Markets

- Developed a comprehensive NLP-driven system using **Python**, **NewsAPI**, **spaCy**, and **Word Embeddings** to analyze financial news, assign sentiment/relevance scores, and evaluate market impact via dynamic visualizations.
- Integrated **time-series analysis**, **forex volatility metrics**, and **correlation matrices** to assess sentiment trends and currency movement relationships across multiple pairs and indices. [\[GitHub\]](#)

Streamlined Historical Market Data Downloader

- Developed a robust **Python**, **Streamlit** application to automate the extraction of historical **OHLC data from MT5**, featuring customizable symbol selection, timeframes, and date ranges to support diverse trading strategies.
- Empowered users to effortlessly access, analyze, and export broker-specific historical data using **MT5 API**, **Pandas**, **Plotly**, and technical indicators—enabling efficient **backtesting**, **algorithmic trading**, and **quantitative market research**. [\[GitHub\]](#)

TRADING EXPERIENCE

- Currently trading **Cryptocurrencies and Forex pairs on (MT5)**, leveraging **advanced algorithmic strategies**, **technical analysis**, and **mathematical models** for precision market execution.
- Developed multiple algorithmic trading strategies using Pine Script in TradingView, focusing on technical indicators, backtesting, and automated alerts.
- Managing portfolio by using Monte Carlo Simulation, Kelly-Fraction, and Marko-Frontier to maximize portfolio performance and minimize downside exposure

SKILLS

Languages/Libraries

Python (Pandas, Scikit-learn, Pyspark, Numpy), SQL, Core Java.

Frameworks/Technologies

AWS, Git, Excel, Agile Methodology, Power-BI, Machine Learning, LLM, ETL.

CERTIFICATIONS

- EPAT (Executive Program in Algorithmic Trading) by QuantInsti.
- Quantitative Research Analyst Virtual Internship by JP Morgan.
- Python for Machine Learning with NumPy, Pandas and Matplotlib.
