

Shwejan Peddi
Full Stack Java Developer
+1 (940) 567-8866 | shwejanpeddi66@gmail.com

Professional Summary:

- Over 5 years of professional experience in analyzing, designing, developing, supporting, and testing web-based, distributed n-tier, and client/server architectures.
- Proficient in all phases of the SDLC, including analysis, design, development, testing, and deployment, with expertise in gathering user requirements.
- Strong experience in Agile SCRUM process with Test Driven Development process from the development phase to the testing phase
- Extensive experience in Java/J2EE technologies such as JDBC, Servlets, JSP, JavaBeans, EJB, JMS, Struts, Spring, XML, Web Services, React.js, and Angular 14.
- Strong background in designing and implementing Java and J2EE applications, including Core Java, Enterprise JavaBeans (EJB), Servlets, JPA, and JSP.
- In-depth knowledge of MVC architecture, Struts, Spring frameworks, Java Design Patterns, and Hibernate ORM for object-relational mapping.
- Expertise in Spring Framework, including Spring Boot, IoC/AOP, and declarative and programmatic transaction support.
- Proficient in efficiently using Hibernate for object-to-database mapping and integrating it with Spring to configure J2EE applications.
- Skilled in developing client-side web applications using React.js, with experience in Flux architecture, Redux, and rendering large datasets.
- Hands-on experience in integrating AWS services like S3, Lambda, RDS, and DynamoDB into full-stack applications.
- Proficient in building scalable server-side applications using Node.js.
- Strong knowledge of advanced multithreading and coding Java applications on both client-side and server-side using JDBC.
- Experienced in J2EE design patterns, including MVC, Front Controller, Data Accessor, Value Object, Singleton, and Session Facade.
- Proficient in web development using HTML5, CSS, JavaScript, XML, JSP, JSON, and JSF, with experience in applying CSS in Angular for animations and page transitions.
- Working knowledge of RESTful and SOAP-based Java Web Services, with expertise in implementing SOA (Service-Oriented Architecture).
- Hands-on experience with tools like Maven and JUnit, and proficiency in JSON-based RESTful Web Services.
- Strong background in SQL and PL/SQL, including writing stored procedures, functions, triggers, and views, with experience in Oracle, SQL Server, and MySQL databases.
- Collaborated with teams to analyze business requirements and design solutions in agile development environments.
- Experienced in client interactions, understanding business applications, data flow, and data relationships
- Committed to excellence, self-motivator, fast learner, team player, ability to deal with people diplomatically, and a prudent developer with strong problem-solving skills and communication skills.

Education:

Masters in Computer Science - Illinois Institute of Technology

Bachelors in Computer Science - Indian Institute of Information Technology Kottayam

Technical Skills:

Languages	Java 8,11, C++, PL/SQL, Python
Java/J2EE Technologies	Core Java, JSP, Servlets/Applets, JDBC, JNDI, JMS, JSTL, Java Beans, RMI, Java Multithreading, Generics and Collections, EJB, Tiles, IBM MQ Series, Redis, Kafka,
Web Technologies	HTML5, XML, XSLT, SAX, DOM, CSS3, JavaScript, XPath, AJAX, jQuery, Angular 14, Bootstrap, React.js, Node.js
Cloud Environment	AWS (EC2, S3, Lambda, SQS), Azure, Jenkins, Docker, Git, CI/CD Pipelines, GIT, VIM
Frameworks	Spring boot, Struts, Hibernate, Micro Services
Testing	Selenium, JUnit, Mockito, Mocha, Cypress, Web Workers
Design & GUI Tools	Eclipse, IBM RAD/WSAD
App servers	IBM WebSphere, Apache Tomcat, BEA Web Logic, JBoss
Databases/Tools	Oracle 11g/10g /9i, SQL Server, MySQL, Toad, SQL, NoSQL, UNIX, Gradle, GraphQL
Design/Version Control	UML, Rational Rose, CVS, SVN, VSS, GIT
Operating Systems	Windows, Linux, UNIX

Professional Experience:

Capital One Financial, Aberdeen, NJ

Mar 2024 – Till Date

Full Stack Java Developer

Responsibilities:

- Conducted analysis of organizational needs and goals for the development and implementation of application systems by involving business personnel.
- Interacted with product owners, stakeholder to gather requirements, and prepare documentation on the same.
- Involved in implementation of application using conventional design practices MVC-Model View Controller.
- Developed user interface by using the React, Flux for SPA development.
- Designed, developed and tested HTML5, CSS3, Bootstrap, JavaScript, jQuery and React that meets accessibility and web browser standards for website.
- Used React-Router to turn application into Single Page Application.
- Worked in using React components, Forms, Events, Keys, Router, Animations and Flux concept.
- Used React for templating for faster compilation and developing reusable components.
- Implemented React code to handle cross browser compatibility issues in Mozilla Firefox, IE, Safari and Chrome.
- Developed the Microservices using Spring Boot that create, update, delete and get the assignment information from backend.
- Used Java 8 features such as Lambda expressions, Functional Interfaces, Streams to avoid boilerplate code.
- Used Java 8 to keep code simple and extensively used core java technologies such as Collections, Exception Handling and Implemented Multithread concepts in java classes to avoid deadlocking.
- Handled response data from RESTFUL webservices using XML, JSON and jQuery to update UI Interacted with java controllers.
- Developed REST Web services to make web service calls simple and easy for the client to access it with the help of standard HTTP URIs. Developed micro services using Spring Boot exposed as REST API and integrated with React based web applications.
- Used Spring Core annotations for Spring Dependency Injection, Spring MVC for Rest API's and Spring Boot for microservices.

- All the functionalities are implemented using Spring IO / Spring Boot and Spring JDBC.
- Worked on Swagger API and auto-generated documentation for all REST calls.
- Secured API's by implementing OAuth 2.0 token-based authentication/authorization using Spring Security.
- Developed trait handlers(services) for the devices to interact and update their different states using GRPC.
- Implemented persistence layer using Spring JDBC template to store the data in PL/SQL database.
- Experience in Message Oriented Middleware implementation using JMS and Apache Kafka.
- Involved in writing complex SQL queries using correlated subqueries, joins, and recursive queries, PL/SQL stored procedures.
- Worked on a project which handles searching algorithms using Elastic Search which is mainly used for pulling analytics related information using the keywords entered by the end user
- Used Kafka for Publish/Subscribe pattern in application which deals with messaging.
- Setup CI/CD pipeline process for the application using the Jenkins.
- Jira is used for Project Management and GitLab is used for issue and bug-tracking.
- Designed and implemented triggers to Splunk infrastructure, deployment, products, apps, reports, alerts, and dashboards.
- Working experience with AWS Services: Lambda, S3, EC2, EB, CloudFront, SNS, DynamoDB and Docker Containerization.
- Working experience on serverless deployments through AWS CLI. changing the AWS infrastructure Elastic Beanstalk to Docker with Kubernetes.
- Use Amazon Cloud Watch to monitor AWS services & Amazon Cloud Watch logs to monitor the application.
- Developed AWS cloud formation templates and setting up Auto scaling for EC2 instances and involved in the automated provisioning of AWS cloud environment using Jenkins.
- Used Junit for unit test cases to monitor the application functionality and Monitored the Error logs using Log4j and fixed the problems.

Environment: React, HTML5, CSS3, JavaScript, jQuery, Java 8, Spring, Spring Boot, Hibernate, Spring batch, JPA, JMS, Eclipse, PL/SQL, Swagger UI, Log4j, Splunk, JIRA, Apache Kafka, Kubernetes, Web Services, Microservices, GRPC, RESTful, Mockito, Junit, Karma, Jasmine, GitLab, Jenkins, Docker and AWS.

Hexaware Technologies – Hyd, INDIA

Jan 2021 - Aug 2022

Full Stack Developer

Responsibilities:

- Conducted analysis of organizational needs and goals for the development and implementation of application systems by involving business personnel.
- Design and developed the application using framework Angular with HTML5, CSS3 and Typescript.
- Built Angular 8 components, UI services to consume REST services using Component based architecture provided by Angular 8.
- Implemented Angular Router to enable navigation from one view to another.
- Created Reusable components, Custom Modules, Custom Directives, Pipes, Services in Angular.
- Used Node.js to run Grunt tasks and build properly the project and Implement modules into Node JS to integrate with designs and requirements.
- Worked on responsive design and developed a single ISOMORPHIC responsive website that could be served to desktop, Tablets and mobile users using React.js.
- Implemented various screens for the front end using React.js and used various predefined components from NPM (Node Package Manager) and redux library.
- Responsible for React UI and architecture. Building components library, including Tree, Slide-View, and Table Grid.

- Responsible for the frontend development using React JS and backend using Node JS.
- Used Node.js and Express.js Framework to set up middleware to respond to the HTTP request and MongoDB for persisting information from API developed.
- Understand and adopt Microservices architecture to gradually replace a core monolithic application to Microservices.
- Designed and developed RESTful Web Services using Spring Boot.
- Developed server-side application to interact with database using Spring Boot and Hibernate.
- Developed RESTful Services with Java using JAX-RS, Jersey and Spring Boot. Coding for consuming the REST APIs, getting JSON response and parsing them to get the required formats.
- Expertise in various components in Spring, which includes Spring IOC, AOP, Spring JDBC, Spring MVC, Spring JPA, Spring Batch, Spring Security and Spring Boot.
- Expertise in spring based microservices, and enabled discovery using eureka server.
- Performed CRUD operations like Update, Insert, and Delete the data in NoSQL database MongoDB.
- Worked with NoSQL database MongoDB and developed custom MongoDB applications specific to clients' needs.
- Implemented Security in Web Applications using Azure and Deployed Web Applications to Azure.
- Creating Json deployment templates for provisioning virtual networks, subnets, VM Scale Sets, Load balancers and NAT rules. Define set of resources and specifying deployment parameters to Azure Resource Manager (ARM) templates to creating resource group of virtual machines
- Using Azure Functions to integrate applications and run backend processes according to schedules without provisioning/managing servers.
- Used Azure for Scaling and checking the reliability of the applications which were developed during the project.
- Used Jenkins to execute the Maven project as well to build the version system tool.
- Integrating various Version control tools like Bitbucket, build tools and deployment methodologies into Jenkins to create an end-to-end orchestration build cycles.
- Maintained and managed cloud & test environments and automation for QA, Product Management and Product Support.
- Developed and performed test cases using Jasmine and Karma for front end unit testing and used the Cucumber, Protractor and Http-server for the End 2 End testing.
- Developed JUnit test cases for Persistence layer and Business layer to perform the unit level testing.
- Involved in Agile stand-up meetings throughout the project with team members on day-to-day basis for the update on project status using JIRA.

Environment: Java 8.0, Spring, Hibernate, Spring batch, Angular 8, JavaScript, Angular2, HTML5, CSS3, Angular, React.js, Express.js, Node.js, Spring Boot, JPA, Eclipse, Drools, JBPM, jQuery, MongoDB, ILOG, log4j, Junit, Easy Mock, RabbitMQ, XML, Web Services, SOAP UI, Jenkins, Docker, Kubernetes, and Azure.

Logic Planet technologies, Hyd,INDIA

Apr 2019 – Dec 2020

Full Stack Developer

Responsibilities:

- Responsible for gathering business and functional requirements and preparing the design and proof of concept.
- Involved in the Complete Software development life cycle (SDLC) to develop the application.
- Extensively involved in developing Web interface using JSP, JSP Standard Tag Libraries (JSTL) using Struts Framework.
- Involved in designing, developing, and testing J2EE components like Java Beans, Java, XML, Collection Framework, JSP, Servlets, JMS, JDBC, and JNDI and deployments in WebLogic Server.
- Designed and developed various modules of the application with frameworks like Spring MVC, Web Flow, architecture, and Spring Bean Factory using Spring Boot, IOC, and AOP concepts.
- Involved in the design and development of server-side layer using XML, JSP, JDBC, JNDI, EJB, and DAO patterns using

Eclipse IDE.

- Built Angular WiFi interfaces and optimized Spring Boot backend using efficient SQL queries and LRU caching (replacing Redis), reducing server costs by 20% and improving data retrieval by 35%, boosting user engagement by 27%.
- Developed ELT pipeline with Spring Boot for SQL extraction, Kafka streaming, and AWS Aurora for batch loading, handling 500K+ records/hour, reducing latency by 35% and costs by 25%.
- Optimized call routing on Comcast Voice portal using Java, Apache Kafka, and NGINX load balancing; implemented time-based call forwarding, reducing call errors from 15% to 5% and increasing user satisfaction by 22%.
- Built an interactive map using Angular and Leaflet; migrated from MongoDB to AWS DynamoDB for real-time alerts and geospatial queries, reducing retrieval costs by 30% and speeding up issue resolution by 18%.
- Implemented MFA using Spring Security; replaced Twilio and SendGrid with AWS SNS for SMS OTP and AWS SES for email OTP, reducing communication costs by 35% while adhering to OWASP and GDPR standards.
- Automated CI/CD pipelines using Jenkins and AWS CodePipeline, integrating testing and deployment stages, reducing deployment time by 30%, and improving code quality for seamless continuous delivery.
- Applied cost management strategies for AWS services by optimizing resource usage and scaling policies.
- Developed Spring JMS message listeners to consume messages from the queue and developed spring scheduling components to perform batch operations.
- Designed and developed XSLT transformation components to convert data from XML to HTML, Used XML DOM API for parsing XML.
- Designed various tables required for the project in the Oracle database and used the Stored Procedures in the application.
- Used ANT scripts for code compilation and Log4j for logging purposes.
- Developed cross-browser compatible websites using agile, scrum methodologies.

Environment: Java, JDBC, Spring Core, AWS, Hibernate, Design Patterns, HTML 5, CSS 3, XML, Ajax, JQuery, Angular, Oracle, WebLogic, ANT, Ant, Log4j, XSLT, Agile and Windows 7.
