

Professional Summary

Software Engineer with 4+ years of experience designing distributed backend systems and developer APIs for financial and cloud-native platforms. Led a 5-member engineering team in building scalable, event-driven architectures using Java, Spring Boot, and Node.js. Experienced in developing developer-first APIs, contributing to open-source projects, and integrating decentralized components.

Skills

|                                  |                                                                                                                                 |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| Programming:                     | Java, Spring Boot, Kotlin, Python, RESTful APIs, GraphQL, Multithreading, Design Patterns, OOP                                  |
| Cloud & DevOps:                  | AWS (Lambda, AppSync, SNS/SQS, EC2, S3, RDS, CloudWatch), GCP, Jenkins, Harness, Docker, Kubernetes, Terraform, CI/CD Pipelines |
| Distributed Systems & Databases: | Redis, Kafka, PostgreSQL, MySQL, Oracle, NoSQL, Sharding, Load Balancing, Caching, ACID Transactions, Neo4j, Data Modeling      |

Work Experience: 4+ Years

Software Developer  
AfterQuery Experts

Oct 2025 - present  
Remote, United States

- Developing and maintaining backend services using **Java, Spring Boot, and RESTful APIs** for enterprise-grade applications. Working on **API integration, database optimization, and automation pipelines**, ensuring scalability and fault tolerance.
- Enhancing application performance through multithreading, caching (Redis), and asynchronous event handling.
- Collaborating with cross-functional teams to design modular backend components and implement CI/CD automation using Jenkins.

Software Developer  
Tata Consultancy Services (TCS)

Aug 2019 – Dec 2023  
Pune, Maharashtra, India

- Designed and maintained production-grade backend APIs for large-scale financial systems using Java (Spring Boot) and Node.js. Focused on API versioning, authentication, and developer usability through clear schema definitions, pagination, and error handling standards.
- Built microservice-based systems with an emphasis on scalability and performance, leveraging asynchronous communication via Kafka and caching through Redis. Introduced API rate limiting and circuit breakers to ensure resilience under high request concurrency.
- Led a 5-member engineering team to implement developer tools that streamlined backend integration and test automation. Introduced API documentation automation using OpenAPI/Swagger, improving integration time by 35%.
- Containerized microservices using Docker and deployed them on Kubernetes clusters for automated scaling and zero-downtime deployments. Implemented continuous integration and delivery pipelines using Jenkins and GitHub Actions for high-velocity deployments.
- Collaborated on decentralized architecture prototypes by integrating event-driven payment and risk modules with blockchain-based ledgers. Designed REST and GraphQL interfaces for interoperable data exchange, introducing modular SDK-style architecture to simplify developer adoption.
- Contributed to open-source internal frameworks by developing reusable backend utilities and API gateway components written in Node.js and TypeScript. Followed open PR review processes, maintained test coverage, and applied semantic versioning practices to ensure maintainability.

Projects

- Cloud-Native Payment Processing System (FinTech):** Developed a consistent and reliable payment orchestration platform using **Java, Spring Boot, Kafka, and Redis**. Designed idempotent APIs and ACID-compliant workflows ensuring transactional safety and achieving 99.99% uptime across microservices.
- Tourist Guide & Booking Platform:** Built a scalable travel booking system with **Spring Boot** microservices and GraphQL APIs. Implemented a Saga orchestration pattern for distributed transaction management, improving reliability and maintaining low latency under peak traffic.
