Professional Summary

Fullstack Developer and Data Science graduate with a master's in professional studies, bringing nearly 3 years of experience in **Java/J2EE** and **React JS** development across various domains. Adept at building robust, scalable applications and integrating data-driven solutions. Proficient in cloud platforms, microservices, and containerization, with a strong foundation in databases, automation, and machine learning technologies.

Education

University of Maryland, Baltimore County, MPS in Data Science Aug 2022 - May 2024

- GPA: 3.5/4.0
- Coursework: Data Science, EDA, Natural Language Processing, Statistics, Visualization, Machine learning.

Lovely Professional University, Bachelor of Technology in Computer Science Aug 2016 - July 2020

- GPA: 3.7/4.0
- **Coursework:** C, C++, Java, Data Structures, Android Development, Web Development, Linux, Problem Solving.

Experience

Application Developer, IBM - Bangalore, India Jul 2021 – Jul 2022

- Developed resilient **microservices** in **Java** with **RESTful APIs**, enhancing system scalability and reliability for application processing.
- Integrated **React JS** to create interactive user interfaces, seamlessly connecting with back end Java applications.
- Developed **custom React Hooks** to encapsulate reusable logic, improve code modularity, and optimize state management while working on various projects.
- Worked with both **Redux** and **React Context** for state management, leveraging Redux for complex, large-scale applications and React Context for simpler, lightweight state-sharing needs.
- Optimized system performance by incorporating **MongoDB 4.x+**, significantly improving data handling.
- Configured **Jenkins** and **Docker** for continuous integration, accelerating development cycles.
- Deployed applications on **Kubernetes**, leveraging services for scalability and resilience.
- Standardized logging across applications using **SLF4J**, improving monitoring and troubleshooting processes.
- Managed source control using **SVN**, maintaining code integrity and fostering team collaboration.
- Streamlined project management and issue tracking with **JIRA**, enhancing visibility and tracking.
- Utilized **Maven 3.x** for building and managing project dependencies via pom.xml, ensuring consistent builds across environments.
- Proposed technical feasibility solutions for a new project **Customer Ticketing Platform**, including new system designs and performance improvement options.
- Conducted **unit testing** with **JUnit**, ensuring robustness and reliability of both new and existing features.
- Developed and maintained **SQL** and **NoSQL** database integrations, ensuring efficient data storage and retrieval.
- Led training sessions for team members on new technologies and practices, fostering skill development and knowledge sharing.
- Served as an **instructor** for new hires, sharing expertise and best practices to facilitate smooth onboarding.

Associate System Engineer, IBM - Bangalore, India Jan 2020 – Jul 2021

- Maintained applications using **Java** and the **Spring Framework**, ensuring adherence to production code standards.

- Developed responsive web interfaces using **Angular**, improving user engagement and operational efficiency.
- Implemented **CI/CD** pipelines with **Jenkins** and **Docker**, ensuring high availability and rapid rollouts.
- Utilized **MySQL** for robust database management, streamlining data transactions and queries.
- Enhanced application security using **Spring Security**, safeguarding sensitive health data.
- Managed version control with **Git**, facilitating effective collaboration and code management.
- Configured **Apache Tomcat** as the web server, optimizing application deployment and performance.
- Employed **Maven** for dependency management and build automation, enhancing project consistency.
- Conducted unit testing with **JUnit 5**, ensuring correct and efficient functionalities before production.
- Configured **Docker** containers for consistent environments across development, testing, and production.
- Utilized **Oracle** for handling large volumes of customer data, ensuring data integrity and security.
- Conducted advanced debugging and performance profiling using **IntelliJ IDEA**, **Eclipse** and **Visual Studio** to identify and resolve bottlenecks.
- Participated in code reviews via **Git**, ensuring adherence to coding standards and improving overall quality.
- Awarded with **1H 2021 Best GBS Associate Award** for excellence in the very first six months.
- **Certificate of Appreciation**

Projects

NLP (Text Summarization): SNAP SUMM Github

- Developed "Snap Summ," a text summarization web application using **Stream lit** and a custom-trained **T5 NLP model** to generate concise and contextually rich summaries of extensive scientific documents, incorporating advanced features like text-to-speech conversion, language translation, and real-time chat support, and achieving high semantic similarity scores (**0.85-0.95**) to ensure accurate preservation of original content meaning

Exploratory Data Analysis: Predicting Employee Layoffs Since Covid19 Github

- Investigated the impact of Federal Interest Rates on layoffs, employing machine learning models including **Linear Regression**, **KNN**, and **Decision Tree**. Utilized Python programming language and machine learning libraries

Food Hive Github

- Developed a comprehensive food delivery application similar to Swiggy, using React for the frontend and Java Spring Boot for the backend, with MongoDB as the database. The application featured nearby restaurant listings, menu displays, and options for pickup or delivery to user-defined addresses. Implemented custom React hooks, Redux, React Context, functional components, and state variables to create a dynamic and user-friendly interface.

Health Care System Github

- The project aims to improve patient comfort and relaxation in the hospital by allowing patients to schedule all appointments from home, utilizing Java along with frameworks like Spring and Angular

Technologies

- **Languages:** Java, C, C++, JavaScript, Python
- **Frameworks/Libraries:** Spring 3.x, Hibernate 4.x and 5.x, Spring Boot, ReactJS, Redux, Angular, Bootstrap, sklearn, NumPy, PyTorch, TensorFlow, Node.js
- **Databases:** SQL Server, MySQL 5.6, Oracle 12c, MongoDB 4.x+
- **Tools:** Jenkins, Docker, Maven 3.x, Ant, IntelliJ IDEA, Eclipse, NetBeans, Git, SVN, GitHub, Jira, Kubernetes, Power BI, Tableau, Excel, Office Suite, SoapUI, Postman.
- **Platforms:** AWS, Google Cloud Platform, Linux (Ubuntu), Apache Tomcat
- **Testing:** JUnit 4 and 5, Selenium
- **Logging and Monitoring:** Kubernetes, Splunk, Kibana, Elasticsearch
- **Other :** JMS, SLF4J, SOAP, XML, HTML, CSS, Model-Based System Engineering, Project Management, User Support, Software Development, Problem-solving
