+1 720-819-1383 | Boulder, CO

EDUCATION

University Of Colorado, Boulder Master's in Data Science (Current GPA: 3.8/4)	Aug 2024 – May 2026 Boulder, USA
Mumbai University, Rajiv Gandhi Institute of Technology Bachelor's of Engineering in Computer Engineering (GPA: 3.7/4)	Jul 2020 – May 2024 Mumbai, India

SKILLS

Programming & Databases: SQL, Python, R, MySQL, PostgreSQL, MongoDB, Snowflake, BigQuery.
Data Warehousing & ETL: Data modeling, schema design, ELT/ETL pipelines, dbt, partitioning/clustering, query optimization.
BI & Visualization: Tableau, Power BI, SQL-based dashboards, KPI automation, interactive reporting.
Analytics & ML: pandas, NumPy, scikit-learn, time-series analysis, predictive analytics, A/B testing, statistical modeling.
Cloud & Tools: AWS (Redshift, S3), GCP (BigQuery), Azure Data Factory; Docker, Airflow; GitHub Actions.
Professional: Data storytelling, Cross-functional collaboration, Problem solving, Communication.

EXPERIENCE

Nexus Weather and Climate - Data Science and Engineering Intern	May 2025 – Present Boulder, USA
- Cleaned, structured, and validated large atmospheric, wave, and precipitation datasets, aligning multi-asset sources into analytics-ready tables within Snowflake and BigQuery; this reduced preprocessing errors and enabled faster SQL querying across millions of records. - Designed SQL-based data marts and developed Tableau/Power BI dashboards to monitor forecasting KPIs, automate weekly performance reports, and integrate uncertainty metrics such as CRPS; these dashboards reduced manual reporting by 40% and gave executives clear, decision-ready insights. - Applied Random Forest and KNN models to forecasting data, translated the model outputs into visual summaries, and collaborated with researchers to deliver trend reports and probabilistic forecasts; this integration helped leadership evaluate predictive accuracy alongside operational analytics.	
Codsoft - Data Science Intern	Jul 2023 – Dec 2023 Mumbai, India
- Designed and implemented preprocessing pipelines for 52k+ customer and transaction records, applying type coercion, deduplication, and outlier handling to ensure consistent data ingestion for dashboards and client-facing analytics solutions. - Developed Tableau and Power BI dashboards for sales forecasting and fraud detection, combining SQL queries with automated Python scripts to refresh KPIs; this reduced reporting time by 40% and improved clients' ability to take timely business actions. - Deployed predictive models as REST APIs with documentation and basic logging, collaborated with client teams to present insights, and trained users on dashboard adoption; these efforts shortened delivery timelines by 25% and improved decision-making across projects.	

PROJECTS

Data Warehouse Migration <i>MySQL, Snowflake, BigQuery, dbt</i>	May 2025
- Migrated analytics workflows from MySQL to Snowflake and BigQuery, restructuring schemas with partitioning and clustering strategies that reduced query latency and improved scalability for larger datasets. - Built dbt transformation models and automated ETL pipelines that delivered clean, standardized tables into KPI dashboards, enabling analysts to run consistent queries across multiple warehouses.	
KPI Automation Pipeline <i>Python, SQL, Tableau</i>	Jan 2025
- Automated Tableau dashboard refreshes by integrating Python scripts with SQL queries, eliminating manual updates and reducing reporting time by 40% while improving accuracy of KPIs. - Standardized KPI definitions and implemented scheduling logic, ensuring stakeholders received timely, reliable metrics that could scale across multiple departments and reporting cycles.	
PCOS Health Analytics Tool <i>Python, Scikit-learn</i>	Jan 2025 – Mar 2025
- Built an end-to-end analytics pipeline to detect PCOS by preprocessing patient health indicators, applying predictive models, and validating results against labeled medical datasets. - Integrated predictive outputs into a reporting interface that visualized diagnosis probabilities and risk factors, supporting clinicians with early detection insights in a user-friendly format.	
Denver International Airport Dashboard <i>Tableau, ServiceNow, Azure DevOps</i>	Nov 2024
- Built an ETL pipeline to integrate ServiceNow and Azure DevOps records into a centralized analytics system, enabling near real-time monitoring of incidents and operational activities. - Designed interactive Tableau dashboards with drill-down KPIs for airport leadership, improving transparency, streamlining incident response, and accelerating data-driven decision-making.	
Amazon Prime Content Analysis <i>Tableau, SQL</i>	May 2022
- Created a Tableau dashboard connected to SQL data sources to analyze platform performance, user engagement, and content distribution patterns across genres and regions. - Produced visual insights highlighting top-rated titles, trending genres, and performance breakdowns, helping inform recommendations for content strategy and reporting.	

CERTIFICATIONS/PUBLICATION

- Completed Full Stack Development (MERN) course and Machine Learning A-Z™: AI, Python & R + ChatGPT from UDEMY.
- Published a technological paper on Yoga Posture Detection and Correction. [Link](#)
