Summary

Data Analyst with 3+ years of experience transforming complex datasets into strategic insights. Expertise in Python, SQL, R, and cloud platforms. Proficient at developing ETL pipelines and interactive dashboards to enable data-driven decision-making. Skilled in enhancing operational efficiency, optimize business processes, and deliver actionable insights using advanced analytics and machine learning.

Skills

Methodologies: SDLC, Agile, Waterfall

Programming Languages: Python, SQL, R

Libraries: Pandas, NumPy, SciPy, Matplotlib, Seaborn, TensorFlow

Database: Microsoft SQL Server, MySQL, PostgreSQL MongoDB

Data Visualization Tools and Platforms: Tableau, Power BI, Advanced Excel (VLOOKUP, Pivot Tables)

Statistical Analysis: A/B testing, Descriptive Statistics, Predictive Analytics, Hypothesis Testing, Regression Analysis, Time Series Analysis, EDA

Cloud Platforms: AWS (S3, EC2, Redshift), Microsoft Azure, Snowflake

Version Control & ETL Tools: Git, GitHub, Alteryx, Talend, dbt

Soft Skills: Critical thinking, Strong Communication, Problem-Solving, Attention to Detail, Data Storytelling, Stakeholder Management, Collaboration with cross-functional teams

Education

Master of Science in Data Science & Analytics | Florida Atlantic University

May 2025

Work Experience

Data Analyst | BNY Mellon, Florida

January 2025 - Current

- Utilized **Python (pandas, NumPy)** and **SQL (MySQL, PostgreSQL)** to clean and analyze operational data, enabling the team to identify process improvement opportunities.
- Analyzed customer transaction data using **Python** and **SQL** to identify spending patterns and seasonal trends, resulting in a 15% improvement in inventory management and \$200K cost savings through optimized stocking decisions.
- Leveraged **Python** and **SQL Server** and **Kafka**, to analyze real-time transaction data from wealth management systems, identifying process bottlenecks and implementing automated monitoring that reduced processing errors.
- Conducted **statistical analysis** and **time series forecasting** using **R** and **Jupyter Notebook**, developing predictive models for client behavior and attrition risks in the Private Wealth Management segment, supporting the Operations team's efforts to anticipate future trends.
- Designed and maintained interactive **Tableau** dashboards tracking key operational metrics (processing time, error rates, transaction volume), enabling real-time performance monitoring and contributing to a 25% improvement in team response time.
- Collaborated with Technology team to streamline data integration processes using **Snowflake**, reducing report generation time by 60% and improving data accuracy for operational decision-making.
- Conducted **ad-hoc analysis** and **root cause analysis** using **SQL** and **Power BI** to investigate operational anomalies and performance gaps, delivering actionable insights through executive reports that supported strategic decision-making for process optimization initiatives.

Data Analyst | Informative Web Solutions, India

January 2021 - August 2023

- Developed **Python** scripts using **pandas** and **NumPy** to automate data import and standardization processes for CSV files from diverse clinic management systems, improving data consistency and reducing manual processing time by 70% compared to previous manual methods.
- Utilized **Azure Cloud** services and **SQL Server** for secure data storage and retrieval, collaborating with the IT team to establish data governance protocols and manage database connections from 100+ dermatology clinics across the network.
- Created and maintained **SQL** queries for regular and ad-hoc reporting, delivering timely insights to stakeholders on key performance indicators such as patient visits and resource utilization.
- Designed interactive **Power BI** dashboards with **time series forecasting** to visualize clinic performance, enabling more frequent reporting cycles and improved operational planning.
- Conducted data scraping to gather valuable information from various sources, enriching datasets and expanding analytical capabilities.
- Led data process improvement initiatives by implementing automated data validation scripts in **Python** and creating standardized **ETL** workflows, which reduced manual data processing time, improved data quality through automated error checking, and streamlined reporting processes for the healthcare analytics team.

Projects

Social Media Application for Florida Atlantic University: Developed a social media platform designed to connect students, staff, and faculty within the university community. The application enables users to collaborate, post content, and engage with one another, fostering stronger connections and enhancing communication across the Florida Atlantic University community.

Sales Revenue Analysis Dashboard using Power BI: Developed a Power BI project focused on analyzing and visualizing sales revenue data. The comprehensive dashboard effectively tracks key performance metrics including total revenue, sales trends, and product performance, providing valuable insights for data-driven decision making and business analysis.

SleepSync Analysis: Developed a project that analyzes sleep data from wearable devices to predict health risks, such as cardiovascular disease, linked to poor sleep quality. The system provides insights and recommendations to improve sleep hygiene, helping individuals enhance their well-being and prevent potential health issues.
