Professional Summary

Results-driven **Data Analyst** with 4+ years of experience in **data analytics, reporting, and automation** across compliance and technology domains. Proficient in **Python, R, SQL, Power BI, and MATLAB** with a solid foundation in **data modeling, big data, and statistical analysis**. Experienced in designing interactive dashboards, conducting data validation, and automating data pipelines. Known for translating raw data into actionable business insights and improving data accuracy through analytical rigor.

Certified in **RStudio, MATLAB, and Python**, with academic coursework in **Data Analytics I & II, Harvesting, Storing & Retrieving Data, Big Data, and Data Modeling** from the University of North Texas.

Technical Skills

Programming & Analytics: Python (Pandas, NumPy, Matplotlib, Seaborn), R, SQL, MATLAB, Excel Macros

Visualization Tools: Power BI, Tableau, Tableau, Matplotlib, Seaborn, Plotly, Excel Dashboards

Databases: MySQL, SQL Server, MongoDB, Oracle

Statistical Analysis: Regression, Correlation, Forecasting, ANOVA, Hypothesis Testing

Big Data Tools: Azure Databricks, PySpark, Hadoop (Intro), Hive

Data Operations: ETL, Data Wrangling, Data Cleaning, API Integration, Power Query

Version Control: Git, GitHub, JIRA, Confluence

Tools & IDEs: Jupyter Notebook, RStudio, MATLAB, VS Code, Excel

Methodologies: Agile, Scrum, CI/CD

Professional Experience

Data Analyst / Automation Engineer

Master Compliance, USA | *May 2024 – Present*

Project: Compliance Analytics Modernization Project

- Developed automated **Python and Power BI reports** for compliance data tracking and audit readiness.
- Created **ETL pipelines** for extracting and cleansing large datasets from multiple systems into Azure Databricks.
- Modeled data and built **interactive Power BI dashboards** to visualize compliance KPIs, risk metrics, and exception trends.
- Automated manual validation tasks using **Python scripts**, improving accuracy and reducing processing time by 60%.
- Integrated **SQL queries and Power BI dataflows** to streamline daily report generation.
- Used **R for statistical analysis** on compliance metrics to forecast potential violations and risk trends.
- Collaborated with cross-functional teams to define **data validation rules and governance frameworks**.

Key Achievements:

Reduced manual compliance reporting time from 3 hours to 30 minutes using automated pipelines.

Designed dynamic Power BI dashboards improving audit visibility across business units.

Data Analyst / QA Engineer

Turing Minds Pvt. Ltd., Hyderabad, India | *Jan 2020 – Jan 2023*

Project: VR Application Data Analytics & QA Platform

- Conducted **data validation and testing** of VR user data to ensure accuracy in application performance analytics.
- Designed **Excel and Power BI dashboards** for tracking key VR metrics, including user engagement and session performance.
- Used **Python and R** to perform exploratory data analysis (EDA), data cleaning, and statistical visualization.
- Assisted in building **data models** and **reporting pipelines** for internal analytics platforms.
- Collaborated with development teams to validate data flow from sensors and APIs to backend databases.
- Documented manual and automated data test cases, ensuring validation coverage and accuracy.

Key Achievements:

Improved data accuracy by implementing end-to-end validation scripts in Python and SQL.

Enabled the analytics team to identify 25% more VR performance anomalies through better visualization and test coverage.

Education

Master's in Advanced Data Analytics — *University of North Texas (UNT), USA*

Jan 2022- may 2024

Bachelor of Technology (B.Tech) — *Electronics and Communication Engineering*

Aug2018- July2022

Relevant Coursework:

Data Analytics I & II
Harvesting, Storing, and Retrieving Data
Big Data
Data Modeling and Visualization
Predictive Data Analysis

Certifications

- **Certified Python Developer** – GUVI
- **RStudio Certification** – RStudio Academy
- **MATLAB for Data Analytics** – MathWorks
- **Advanced Excel for Business Analytics** – Coursera
- **Power BI for Data Visualization** – Microsoft Learning

Academic & Personal Projects

Project 1: Retail Sales Forecasting using Python

Conducted EDA on retail sales datasets using **Pandas, Seaborn, and Matplotlib**.

Built regression models to forecast sales and identify high-performing product segments.

Automated weekly report generation using **Python scripts** and Excel integration.

Project 2: Big Data Compliance Dashboard (Azure Databricks & Power BI)

Processed large datasets using **PySpark** on Databricks.

Built data pipelines for ingestion, transformation, and visualization of compliance data in Power BI.

Project 3: KPI Performance Prediction using RStudio

Developed regression models in **RStudio** to predict KPI variations.

Visualized findings using **ggplot2** and **Shiny dashboard**, helping management in data-driven decisions.

Soft Skills

Analytical Thinking | Problem Solving | Business Communication | Team Collaboration | Attention to Detail | Critical Reasoning
