

Sirisha Panuganti

Java Full Stack Engineer

(660)-528-0020 | sirishap033@gmail.com | <https://www.linkedin.com/in/sirishap03/>

Summary

- Java Full Stack Professional with 6+ years of experience in software development.
- Proficient in developing microservice applications using Java/J2EE technologies, with expertise in various Spring Framework modules such as Spring MVC (dependency of Injection), IOC, AOP, Spring Data, Spring IO, Spring Security, Spring Boot with Thyme leaf, Spring Batch, Spring Integration, Spring Cloud, Spring Zuul, Spring Eureka, Spring Netflix, Spring Hystrix.
- Experience in using Hibernate for Object Relational Mapping (ORM) to transfer and connect the database and also used Hibernate/JPA for mapping Java classes with database.
- Skilled in integrating Java applications with various databases like MySQL, Oracle, DynamoDB, MongoDB using ORM frameworks.
- Experience in Java 8/11/17 and Java technologies using Core Java-Collections, Exception Handling, Polymorphism, Inheritance, and Serialization & Multi-threading.
- Proficient in front-end technologies like Angular with hands-on experience in various Angular versions 9/13/16, including component-based architecture, services, directives, and dependency injection.
- Skilled in HTML5, CSS3, and JavaScript/TypeScript for building responsive and interactive user interfaces, ensuring cross-browser compatibility and accessibility.
- Skilled in developing scalable and maintainable web applications using React.js, with strong experience in Hooks, Context API, Redux, React Router, and component-based architecture.
- Experience in CI/CD (Continuous Integration and Continuous Delivery) environment using Docker Container and Jenkins.
- Proficient in implementing end-to-end SDLC (Software Development Life Cycle) in Agile Methodology, with strong coding, project management skills, troubleshooting, problem-solving, and testing abilities.
- Exceptional ability to quickly master new concepts with good analytical and ability to perform at a high level, meet deadlines, adaptable to ever-changing priorities.

Skills

Language	Java, PL/SQL, SQL, C, C++, Python
Java/J2EE Technologies	Core Java, Spring Boot, JMS, JSON, Design Patterns, Spring Data, Spring framework, Spring Cloud, Spring Security, Spring Batch, Spring Security, Java mail, Hibernate, Web Services, SOAP, RESTful API, Microservices
IDE's	Eclipse, Spring Tool Suite, IntelliJ IDEA, Visual Studio Code, PyCharm
UI Technologies	Angular, React.js, JavaScript, HTML5, CSS3, Node.js, Bootstrap
Web Services	SOAP, REST API
App servers	IBM Web Sphere, Apache Tomcat, JBoss
CI/CD	Jenkins, RLM, SonarQube
Testing/Code Quality	Postman, SoapUI, JUnit, Mockito, Jasmine, Karma, EclEmma, SonarLint
Database	Mongo DB, MySQL, MS SQL Server
Version Controls	GitHub, Bitbucket, SVN
Cloud	AWS Lambda, AWS Dynamo DB, AWS S3, AWS IAM, AWS EC2, SNS, SQS, AWS CloudWatch
Defect/Issue Management	ALM (Application Lifecycle Management), JIRA
Other Tools & Skills	Apache Kafka, XML, JSON, Splunk, Confluence, Git, MS Office, Critical Thinking, Communication Skills, Presentation Skills, trouble-shooting skills, Problem-Solving

Education

Masters in **Applied Computer Science** | Northwest Missouri State University, Maryville, Missouri | **GPA: 4.0**

Bachelors in **Computer Science** | Jawaharlal Nehru Technological University of Hyderabad, India | **GPA: 3.8**

Certifications

AWS | AWS Certified Developer – Associate

Java 8 | Oracle certified Associate, Java SE 8 Programmer

Experience

Virtusa Corporation (Client – Citi Bank), USA | Java Full Stack Developer

July 2024 – Present

- Designed and implemented Spring Boot microservices for a high-throughput transaction processing system and built RESTful APIs with Spring MVC, Spring Data JPA, and Swagger for consumer and partner integrations.

- Built secure APIs with OAuth2 authentication, role-based access control, and API request & audit logging to ensure compliance, security, and traceability.
- Optimized database interactions using Spring Data JPA and DynamoDB, designing efficient access patterns and partition strategies to support high-volume transaction processing.
- Implemented asynchronous messaging using Apache Kafka to enable decoupled communication between microservices and improve system scalability and reliability.
- Leveraged caching mechanisms with Hazelcast and Spring Cache, reducing database load and improving response times for frequently accessed data.
- Improved backend scalability and efficiency through distributed caching, query optimization, and performance monitoring for high-traffic services.
- Developed scalable Angular SPAs with micro-frontend architecture, lazy loading, RxJS observables, and reusable components, enabling independent module development and maintainable code.
- Built high-performance Angular frontends with client-side validation, error handling, and RESTful API integration, ensuring cross-browser compatibility and accessibility.
- Wrote unit and integration tests for Angular components and services using Jasmine and Karma, ensuring high test coverage and end-to-end tests with Cypress to maintain UI stability across releases.
- Integrated AWS S3 for scalable object storage, enabling efficient file uploads, downloads, and secure data management.
- Implemented serverless workflows with AWS Lambda and API Gateway, reducing manual intervention and improving scalability.
- Containerized services with Docker and authored deployment manifests for automated releases to AWS ECS integrated CI/CD pipelines (Jenkins) for build and deploy.
- Collaborated cross-functionally with product owners and QA teams in Agile sprints, authored technical design documents, and led component-level design discussions.
- Participated in on-call production support, applied troubleshooting skills for live issues, and deploying hotfixes with minimal downtime.

Northwest Missouri State University, USA | Software Developer

Apr 2023 – Apr 2024

- Designed and implemented RESTful microservices using Spring Boot, Spring Data JPA, and Spring Cloud for scalable applications.
- Built responsive Angular user interfaces with HTML5, CSS3, and Bootstrap, focusing on UX/UI best practices and performance optimization.
- Developed responsive Angular SPAs leveraging RxJS and NgRx, improving frontend performance, maintainability, and state management.
- Optimized frontend performance using lazy loading, AOT compilation, and change detection strategies.
- Automated CI/CD pipelines with Jenkins and Docker, enabling zero-downtime container deployments to Kubernetes clusters.
- Wrote unit tests and integration tests using JUnit, Mockito, and Cypress, increasing test coverage by 100%.
- Worked with Python to automate the process of data analysis and visualization, facilitating informed decision-making.
- Worked on creating complex SQL queries for processing the data.
- Developed queries and Stored Procedures in SQL and optimized the existing queries and Stored Procedures ensuring efficient data storage and retrieval for improved performance.
- Identified and validated the data based on required fields and generating the reports to the validated data.

Publicis Sapient, India | Java Full Stack Developer

Apr 2022 – Dec 2022

- Engineered high-throughput microservices using Spring Boot, Spring Cloud Config, and Netflix OSS components (Eureka, Zuul, Hystrix), enabling dynamic service discovery and fault tolerance in a cloud-native environment.
- Optimized database interactions with Spring Data JPA and Hibernate, including query tuning, indexing, and batch operations to improve transaction throughput.
- Designed scalable persistence layers with relational and non-relational databases (Oracle DB, DynamoDB), ensuring data integrity, consistency, and high availability.
- Developed unit and integration tests for backend components using JUnit, Mockito, and TestNG, ensuring reliability.
- Developed and maintained RESTful APIs in Java, integrating seamlessly with front-end frameworks like React.js for ensuring smooth data exchange.
- Built responsive React.js applications with Hooks (useState, useEffect, useReducer), Context API, React Router, and custom Hooks for reusable logic, improving maintainability and performance.
- Optimized React performance using useMemo and useCallback to reduce unnecessary re-renders.
- Utilized Java-based frameworks such as Spring Data and Hibernate to handle database persistence, ensuring efficient data mapping and transaction management.
- Enhanced observability using AWS CloudWatch, distributed tracing, and structured logging, reducing incident resolution time.
- Implemented AWS Lambda functions for automated background and scheduled tasks.
- Conducted unit and integration testing using JUnit, Mockito, and TestNG, ensuring backend reliability.
- Automated CI/CD pipelines using Jenkins and Docker, enabling seamless deployment of microservices.

- Utilized version control systems such as Git for source code management and collaboration.
- Conducted automated testing and implemented CI/CD pipelines, ensuring seamless deployment and continuous integration of new features and enhancements.
- Collaborated with cross-functional teams to define, design, and deliver new features aligned with business objectives.

Tata Consultancy Services, India | Java Full Stack Developer

Dec 2018 – Apr 2022

- Developed RESTful microservices using Spring Boot, Spring Data JPA, and Spring Cloud, focusing on scalability, high availability, and optimized database operations to support mission-critical applications.
- Involved in all the phases of SDLC including design & Analysis of the Customer requirements and Development of the Application utilizing the Spring Boot framework for banking project.
- Developed high-quality Java 11 code, adhering to SonarQube standards to ensure maintainability, prevent code smells, and minimize defects.
- Worked on Spring modules like Dependency Injection, Aspect Oriented Programming, Spring MVC, Spring Cloud & Spring Security.
- Worked on implementing microservices architecture using Spring Cloud components like Eureka for service discovery, Zuul for API gateway and Hystrix Circuit breaker.
- Integrated Spring Boot applications with MySQL database using Spring Data JPA and customized repository implementations.
- Collaborated with cross-functional teams like DevOps to containerize applications with Docker and deploy them to PCF.
- Built and maintained Angular SPAs, leveraging NgRx/Redux, reactive forms, and lazy loading for improved frontend performance.
- Migrated legacy AngularJS applications to Angular, ensuring seamless user experience.
- Worked on unit test automation using JUnit and Mockito, to maintain code quality and reliability, proficient in debugging using tools like Eclipse and IntelliJ IDEA.
- Designed and integrated JWT authentication and authorization with Spring Security, ensuring secure API access and role-based resource protection.
- Developed Kafka producer and consumer applications to enable, event-driven architecture and asynchronous messaging between microservices.
- Used Spring Kafka API calls to process the messages smoothly and enable asynchronous communication.
- Actively involved in Agile methodologies including iterative development practices like daily status/scrums meetings, Sprint planning, backlog grooming, and retrospective meetings, ensuring timely and high-quality delivery of project milestones.
