

Siva Jampana  
Data Engineer  
Phone: +1 (940-594-8807) | Email: [sivarj2412@gmail.com](mailto:sivarj2412@gmail.com)  
Linkedin: [linkedin.com/in/sivajampana45](https://www.linkedin.com/in/sivajampana45)

Professional Summary:

Data Engineer with over 4 years experience in the financial and retail domains, building scalable ETL pipelines, developing data models, and optimizing SQL queries in cloud environments (AWS, Snowflake, Azure). Data Science graduate with hands-on experience in Machine Learning, NLP, and Data Visualization. Proficient in Apache Airflow, dbt, and real-time data processing using Kafka and Kinesis. Strong problem-solving abilities with a focus on data quality, governance, and business-driven analytics.

Technical Skills:

|                                                                                                                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Data Technologies:</b> Hadoop, Spark, PySpark, HBase, Pig, Hive, MapReduce, Apache Flume, Apache Kafka, Teradata                                                                        |
| <b>Python Development:</b> Extensive experience in data processing, automation, and integration using Python with Pandas, NumPy, PySpark, and SQLAlchemy, Web scrapping with Selenium      |
| <b>ETL Tools:</b> Informatica, NiFi, Ab Initio, Talend, SSIS, Airflow                                                                                                                      |
| <b>Data Analysis/Visualization:</b> Tableau, Power BI, SciPy, Matplotlib, Cyber AI Visualization                                                                                           |
| <b>Machine Learning:</b> scikit-learn, Linear Regression, Decision Trees, KNN, Predictive Modeling, Machine Learning for Security Data                                                     |
| <b>Cloud Platforms:</b> AWS (EC2, S3, Redshift, EMR, Glue, Lambda), Azure (Data Factory, Data Lake, DataBricks, Data Governance, Event Hubs), Data Lake Storage, Cloud-based Data Security |
| <b>Programming Languages:</b> Java, Python, Scala, SQL, PL/SQL, RESTful Web Services                                                                                                       |
| <b>DevOps Tools:</b> Jenkins, Docker, Kubernetes, DevSecOps practices for Continuous Data Security, Terraform                                                                              |
| <b>APIs:</b> SOAP, RETful APIs(FastAPI), Security-focused REST APIs                                                                                                                        |
| <b>Operating Systems:</b> Unix/Linux, Windows                                                                                                                                              |
| <b>Project Management:</b> Jira, Confluence, Microsoft Project                                                                                                                             |

Professional Experience:

Elevance Health | Indianapolis, Indiana (Remote)  
Data Engineer

May 2024 - Present

Responsibilities:

- Designed scalable ETL workflows with Azure Data Factory, Apache Airflow, and PySpark, automating data ingestion and improving pipeline efficiency by 30%.
- Improved data integrity to 95% by developing Python-driven validation frameworks while ensuring compliance with industry regulations like GDPR and CCPA.
- Integrated Azure Synapse Analytics with cloud storage to streamline data transformation and support seamless querying for 500+ business users.
- Reduced cloud storage expenses by 20% through automated infrastructure management using Terraform and optimization strategies.
- Developed dynamic Power BI dashboards to track key performance metrics such as customer engagement and churn, cutting reporting time by 25%.
- Enabled real-time analytics by leveraging Apache Spark to process millions of records per hour, accelerating data-driven decision-making.
- Collaborated with cross-functional teams to enhance cloud data architecture, improve system performance, and optimize operational costs.

Infosys | Hyderabad, India  
Senior System Engineer (Data Engineer)

Mar 2021 – June 2023

Responsibilities:

- Built and maintained ETL pipelines using AWS Glue and dbt to process retail transaction data, ensuring data quality through automated testing and documentation.
- Developed data models in Amazon Redshift following dimensional modeling best practices, supporting daily sales and inventory reporting requirements.
- Orchestrated Apache Airflow DAGs on Amazon MWAA for scheduling retail data workflows, implementing error handling and retry mechanisms.
- Created Python scripts in AWS Lambda for real-time data validation of POS transactions, reducing manual quality checks by 50%.
- Optimized SQL queries in Redshift for customer segmentation and product analytics, improving query performance through proper distribution keys.

- Collaborated with business analysts to implement Quick-Sight dashboards for store performance metrics while maintaining data quality through Great Expectations.
- Processed streaming data from store IoT devices using Amazon Kinesis, feeding into real-time inventory management systems.
- Set up S3-based data lake zones (raw, validated, enriched) following retail data governance standards.
- Designed incremental data loads using AWS DMS for syncing customer data from RDS to Redshift.
- Participated in code reviews and documentation efforts using AWS Service Catalog, improving team knowledge sharing.
- Monitored pipeline health using CloudWatch, providing timely support for failed jobs and implementing preventive measures.
- Implemented Apache Kafka for real-time event streaming of store transactions, enabling immediate inventory updates and sales analytics.

**IDFC First Bank | Hyderabad, India**  
**Jr. Data Engineer**

**Jan 2020 – Mar 2021**

**Responsibilities:**

- Implemented ETL pipelines using Snowflake and DBT to process financial datasets, ensuring data quality through automated testing and documentation.
- Built and maintained data models in Snowflake following dimensional modelling best practices, supporting daily financial reporting requirements.
- Developed and monitored Apache Airflow DAGs for scheduling ETL workflows, implementing idempotent tasks involving messaging system for handling upstream dependencies.
- Developed Python scripts for data validation and cleaning, reducing manual data quality checks by 50%.
- Created and optimized SQL queries for data transformation, improving query performance through proper indexing and partitioning which reduced the execution time by 40%.
- Handled production support rotations to monitor and troubleshoot failed pipeline jobs, collaborating with team members to implement preventive measures and reduce recurring issues.
- Contributed to the development of Databricks notebooks for data processing, learning best practices in Delta Lake and Spark SQL.
- Gained hands-on experience with Azure Data Factory for orchestrating simple data workflows and scheduling jobs.
- Participated in code reviews and documentation efforts, improving team knowledge sharing and code quality.
- Implemented basic data governance practices including data cataloging and access control management.
- Used Git, Apache SVN for version control, Jira for issue tracking, and Jenkins for CI/CD.

**Education:**

|                                                               |                            |
|---------------------------------------------------------------|----------------------------|
| <b>University of North Texas – Denton, TX (GPA: 3.91/4.0)</b> | <b>Aug 2023 – Dec 2024</b> |
| <i>Master of Science in Data Science</i>                      |                            |
| <b>Osmania University – Hyderabad, India (GPA: 3.6/4.0)</b>   | <b>Aug 2016- Nov 2020</b>  |
| <i>Bachelor of Engineering in Mechanical Engineering</i>      |                            |

**Certification:**

**Microsoft Certified: Azure Data Engineer Associate (DP-203)** [Credential ID: 669546AAAC342F07](#)

**Achievement & Extra-Curricular Activities:**

- Participated in workshop on Facebook Bot, conducted by ELAN & NVISION, the annual technical- cultural fest of IIT Hyderabad.
