

**Siva Rajesh Paleti**  
**Full Stack Developer**  
**Phone: +1 469-434-2498**  
**Email: [rajeshpaleti37@gmail.com](mailto:rajeshpaleti37@gmail.com)**

#### PROFESSIONAL SUMMARY:

I am a skilled **Java Full Stack Developer** with over 4 years of experience building scalable and high-performing applications. My expertise includes working with Java, Spring Boot, and Microservices, alongside developing RESTful APIs and deploying applications in AWS, Azure, and GCP environments. I have a strong background in Docker and Kubernetes for containerization and modifying CI/CD pipelines, which allows me to restructure deployment speed and decrease errors. I've led with technologies like Hibernate, JPA, Spring MVC, and React to install efficient and modular web applications. I have experience in migrating legacy systems, revising database performance, and driving system scalability. I'm passionate about leveraging modern technologies to solve problems and deliver reliable, efficient solutions.

#### TECHNICAL SKILLS:

|                                 |                                                                                                                                           |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Languages</b>                | Java, SQL, PL/SQL, Python, C, C++, JavaScript, TypeScript                                                                                 |
| <b>Java Frameworks</b>          | Spring (Boot, MVC, AOP, Security), Hibernate, JPA, Struts, React, Angular, jQuery, Bootstrap                                              |
| <b>Web Technologies</b>         | HTML5, CSS3, JQuery, Ajax, Bootstrap, Angular 11/9/7/5/2, ReactJS, NodeJS, VUEJS, Node.js, AngularJS, JSON, Apache, Tomcat, HTML, GraphQL |
| <b>Cloud Environment</b>        | AWS, Azure, GCP, AWS Lambda, EC2, S3, DynamoDB, RDS, Microservices, Serverless Architecture, Cloud-Native Applications                    |
| <b>Containerization Tools</b>   | Docker, Kubernetes, Container Orchestration                                                                                               |
| <b>Build Tools/CI-CD Tools</b>  | Maven, Ant, Jenkins, Terraform, CloudFormation                                                                                            |
| <b>Version Control Tools</b>    | Git, GitHub, Bitbucket, SVN, GitLab CI, Bamboo                                                                                            |
| <b>Microservices &amp; APIs</b> | Microservices Architecture, Spring Boot, RESTful APIs, SOAP Web Services, RESTful API Integration                                         |
| <b>Databases</b>                | MySQL, Oracle, MongoDB, Cassandra, PostgreSQL                                                                                             |
| <b>Testing Frameworks</b>       | Junit, Mockito, Selenium, Postman, SoapUI                                                                                                 |
| <b>Operating Systems</b>        | Windows, Linux, MacOS                                                                                                                     |
| <b>Bug Tracking Tools</b>       | Jira                                                                                                                                      |

#### PROFESSIONAL EXPERIENCE:

##### **Java Full Stack Developer | Schlumberger, Houston, TX | Oct 2023 – Current**

- Designed and constructed Java-based web applications using Spring Boot for back end and react for front end, performing a smooth and responsive experience across multiple devices.
- Migrated SOAP web services to RESTful APIs, cutting down API response times by 40% and enhancing system performance.
- Elevating microservices architecture with Spring Boot and Kubernetes, resulting in a 25% faster deployment and better scalability.
- Combined Cassandra and MySQL to organize data, building custom key spaces, tables, and indexes to ensure efficient storage and faster retrieval.
- Modified Kafka for real-time data ingestion and event-driven architecture, maximizing communication between microservices and promoting system reliability.
- Directed creation and implementation of CI/CD pipelines applied Jenkins, motoring deployment process and simplifying manual errors by 30% to speed up releases.
- Handled Java 8 features such as Lambda expressions and Stream API to simplify code, elevate data processing, and improve performance of application.

**Environment:** AWS, Spring Boot, Java 8, Hibernate, Kafka, Kubernetes, Microservices, MySQL, Cassandra, React, Angular, Node.js, RESTful APIs, SOAP, Jenkins, Git, GitHub, CI/CD, Swagger, Amazon Lambda, HTML, CSS, JavaScript, Stream API, Spring AOP, Spring Actuator, Postman, SoapUI.

##### **Java Full Stack Developer | Deckers Brands, Irving, Texas | Nov 2022 – Sep 2023**

- Operated JMS (Java Messaging Service) and Kafka to send notifications on process completion and alert users of system issues, streamlining overhauling flow across services.
- Accelerated microservices deployment by leveraging Docker and Kubernetes, resulting in a 30% reduction in deployment time and better service reliability.

- Supervised Azure DevOps for version control and set up computerized CI/CD pipelines, streamlining establish, test, and deployment processes, refining efficiency by 25% and minimizing manual errors.
- Headed to user interface by building responsive designs using HTML, CSS, JavaScript, Angular, and React, boosting user engagement and application responsiveness.
- Cooperated closely with teams to create database schemas, write efficient queries, and sustain data integrity within SQL Server and Oracle, resulting in a 20% improvement in query performance.
- Leveraged HTML, XHTML, DHTML, Java Script, AJAX, Angular 1.x/2, JQUERY, XML, XPATH, JSP and Tag Libraries to develop view pages in portal.

**Environment:** Azure, DevOps, JMS, Apache Kafka, Docker, Kafka, Kubernetes, Spring Boot, React, Angular, HTML, CSS, JavaScript, RESTful APIs, SQL Server, Oracle 12c, Jenkins, OAuth, Microservices, XML, SOAP, JSP, AJAX, jQuery.

#### ***Java Full Stack Developer | Kotak Securities, Mumbai, India | Jun 2021 – Jul 2022***

- Developed Spring Boot microservices for modular functionality as part of a Microservices architecture, consolidating MongoDB collections and utilizing Mongoose API to access data via Node.js for seamless data storage and retrieval.
- Composed IntelliJ IDEA to write, test, and debug application, ensuring code quality and performance across project.
- Applied Spring Dependency Injection (IOC) and Aspect-Oriented Programming (AOP) for logging and injected beans into user interface, honing modularity and maintaining clean code architecture.
- Integrated AWS SQS for messaging, replacing Java Messaging Service (JMS) calls with Amazon SQS for bulk email processing, upgrading message handling efficiency and scalability by 35%.
- Launched test cases using JUnit to validate several business rules in application. Produced TypeScript re-usable components and services to consume RESTAPI's managing Component-based architecture gave by ReactJS.
- Improved data processing efficiency by building a robust ETL tool for data migration, diminishing time taken for extraction, transformation, and loading by 25%.

**Environment:** AWS, IntelliJ IDEA, Java, Java 8, Jenkins, JMS, JUnit, Microservices, MongoDB, Mongoose API, MySQL, Node.js, PCF, React, RESTful APIs, SOA, SOAP, Spring, Spring Boot, SQL.

#### ***Java Developer | Anuh Pharma Limited, Mumbai, India| Mar 2020 – May 2021***

- Processed with Hibernate Transaction Management, Spring/Hibernate Batch Transactions, and Hibernate cache to ensure efficient data management and reinforced performance.
- Analysed to setup of CI/CD pipelines deploying Jenkins, GitLab CI, and Circle CI, test, and deployment processes, led to a 30% faster release cycle.
- Supervised and optimized Cassandra queries using CQL for effective data retrieval and management across the Cassandra Cluster, advancing data access efficiency by 25%.
- Built and monitored SOAP and RESTful Web Services using Java/J2EE, JAX-WS, CXF, and Spring-WS, providing seamless communication between microservices.
- Guided design and development of web applications executing Angular, NodeJS, and GraphQL, increasing user interface responsiveness and system performance.
- Connected JMS with Spring Boot and embedded Active MQ to provide reliable messaging services for microservices, ensuring fault tolerance and augmented messaging performance.

**Environment:** Agile, BDD, Bootstrap, Cassandra, CSS, CSS3, EC2, Git, Hibernate, HTML, HTML5, Java, JavaScript, Jira, JMS, JUnit, Microservices, MVC, NoSQL, RESTful APIs, S3, SOA, SOAP, Spring, Spring Boot, Spring MVC, SQL.

#### ***EDUCATION:***

- Master's in computer science, University of Texas at Arlington, Texas, United States
- Bachelor's in computer science, National Institute of Technology Meghalaya, India

#### ***CERTIFICATION:***

- Oracle Certified Java Programmer
- AWS Certified Solutions Architect – Associate
- Docker and Kubernetes Essentials
