Summary

Data Analyst with 3+ years of experience in SQL, Python, R, and Power BI, Tableau for data analysis, ETL, and reporting. Skilled in data wrangling, statistical modeling, A/B testing, and predictive analytics. Expertise in SQL query optimization, cloud-based data pipelines (AWS Glue, Redshift, Snowflake), and automation to enhance decision-making and operational efficiency. Strong problem-solving skills with a proven track record of reducing manual efforts, optimizing data workflows, and delivering actionable insights.

Technical Skills

- **Programming Languages:** Python, SQL, R
- **Data Analysis:** Pandas, NumPy, Statistical Analysis, A/B Testing
- **Data Visualization:** Tableau, Power BI, Matplotlib, Seaborn
- **Machine Learning:** Scikit-learn, XGBoost, Logistic Regression, Random Forest
- **ETL Tools:** AWS Glue, PySpark, Apache Airflow
- **Cloud Platforms:** AWS (S3, Lambda, Redshift), Snowflake
- **Databases:** MySQL, BigQuery, Redshift
- **Tools:** Git, Jira, Excel (Power Pivot, VBA)

Experience

Syneos Health, AL, USA

Jan 2024 - Present

Data Analyst

- Designed and implemented ETL pipelines to process 5M+ healthcare records from AWS Redshift, Snowflake, and S3, optimizing query performance through indexing, partitioning, and materialized views, leading to a 45% reduction in report generation time.
- Developed data cleansing and transformation workflows in Python (Pandas, NumPy, PySpark) utilizing advanced imputation techniques (KNN, MICE, Bayesian Ridge) to improve data accuracy and reliability by 30%.
- Conducted exploratory data analysis (EDA) using SQL (Window Functions, Aggregate Functions) and Python (Matplotlib, Seaborn) to identify key trends in patient readmissions, chronic disease management, and treatment adherence.
- Implemented data validation frameworks using Great Expectations, PyTest, and SQL Constraints (CHECK, NOT NULL, UNIQUE), ensuring 99.8% data integrity before ingestion into enterprise reporting systems.
- Developed predictive analytics models leveraging machine learning algorithms (Logistic Regression, XGBoost, Random Forest) in AWS SageMaker, improving patient risk stratification and early intervention planning by 18%.
- Designed and maintained Tableau dashboards incorporating DAX, SQL window functions, and AWS QuickSight, providing real-time operational insights for executive leadership and reducing ad-hoc report requests by 40%.
- Automated financial data reconciliation processes in Excel (Power Query, VBA, PivotTables), reducing manual processing time by 60% and improving audit compliance.
- Integrated FHIR and HL7 APIs for real-time claims and electronic health record (EHR) ingestion, enhancing fraud detection models and optimizing reimbursement forecasting.
- Led A/B testing and hypothesis testing using Python (Scipy, Statsmodels) and SQL (T-Tests, Chi-Square, ANOVA) to assess new patient outreach strategies, increasing engagement rates by 12%.

Hexaware Technologies, India

May 2020 - Jul 2022

Data Analyst

- Managed 2TB+ e-commerce transaction data using PostgreSQL, Snowflake, and MySQL, leveraging database normalization (1NF, 2NF, 3NF), denormalization strategies, and indexing to optimize query execution speeds by 35%.
- Developed forecasting models using Excel (Power Query, Time Series Analysis) and Python (ARIMA, SARIMA, Prophet) to enhance inventory optimization and demand prediction accuracy.
- Engineered customer segmentation models using K-means clustering, DBSCAN, and Principal Component Analysis (PCA) to support targeted marketing campaigns and customer lifetime value (CLV) optimization.
- Built and deployed churn prediction models utilizing Logistic Regression, Decision Trees, and XGBoost, reducing customer attrition by 12% through data-driven retention strategies.
- Conducted revenue attribution modeling using SQL-based UDFs, Snowflake Time Travel, and Power BI DAX expressions, linking marketing expenditures directly to ROI and sales performance metrics.
- Automated business intelligence reporting workflows using Tableau (LOD Expressions, Parameter Actions) and Power BI (DAX, Power Query M Language), improving real-time executive decision-making.
- Developed anomaly detection frameworks in SQL and Python leveraging Recursive CTEs, Pattern Recognition, and Isolation Forests, reducing fraudulent transactions and financial discrepancies by 30%.
- Established data governance best practices to ensure compliance with GDPR, HIPAA, and SOC 2 regulations, improving data security and regulatory adherence across multiple departments.
- Designed real-time data ingestion pipelines in Azure Data Factory, integrating structured (SQL, CSV, XML) and semi-structured (JSON, Parquet) data sources for scalable reporting and analytics.

Education

Master's in Computer Science

University of Alabama, Birmingham

Aug 2022 - Dec 2023

Bachelors of Technology in Computer Science and Engineering

KL University, Vijayawada

Jul 2017 - Apr 2021

Certifications

- AWS Certified Solutions Architect – Associate
- AWS Certified Cloud Practitioner
