

# Siva Teja Singam Setty

## Software Engineer

469-563-2985 • [sivatejasingamsetty@gmail.com](mailto:sivatejasingamsetty@gmail.com) • <https://www.linkedin.com/in/sivatejasts>

---

### PROFESSIONAL SUMMARY

- **5+ years** of experience in **Java** and **full stack** development, expertise in **finance, healthcare and e-commerce systems**, with focus on system and API design, development, and implementation of web-based applications.
- Well-versed with all stages of **Software Development Life Cycle (SDLC)**, from business analysis and system modeling to integration, implementation, and testing, ensuring smooth and efficient application delivery.
- Proficient in **Core Java** technologies, specializing in **Multithreading, Exception Handling, Caching and Garbage Collection**, resulting in delivery of high-performance, scalable, and maintainable applications.
- Strong proficiency in **Java 8/11/17/21, Spring Boot, Spring JPA, Hibernate, JDBC, Oracle, MySQL, IBM DB2 and Postgres**.
- Expertise in handling **Core Banking System, EDI transactions, Medicaid Management Information System (MMIS)** workflows.
- In-depth experience in application development using design patterns such as **Adapter**, and **MVC** using **Spring MVC**.
- Expertise in both **Service Oriented Architecture (SOA)** using **Java EE** and **Micro services** architecture, developing and deploying **RESTful web services APIs** using **Spring Boot** for seamless service communication.
- Expertise in practicing **Object-oriented** principles, **Java Collections, Exception handling, I/O operations, multithreading and design patterns** to ensure better code management, error handling and develop efficient and scalable solutions.
- Demonstrated ability to implement **Spring Frameworks** such as **Spring Boot, Spring MVC, Spring Data REST, Spring AOP, Spring Data JPA, Spring DAO, Spring Cloud, Spring Batch, and Spring Security**.
- Skilled in developing **network applications** using **Node.js**, employing its event-driven, asynchronous architecture and single-threaded event loop to enable efficient, and real-time communication.
- Extensive use of **Spring Security, JWT**, and **OAuth2** for **IAM** to secure user authentication, microservices, APIs, and provide role-based access control in enterprise level Java applications.
- Proficient in designing professional **UI** for **web applications** using front-end technologies as **HTML5, CSS3, Bootstrap, JavaScript, jQuery, AJAX, JSON, ReactJS** and **Angular** resulting in responsive user experience.
- Skilled in designing **single-page** web applications using **ReactJS**.
- Expertise in **TypeScript** and **Angular** development, specializing in scalable and efficient web application design.
- Extensive expertise in **Generative AI**, with a strong focus on transformer-based models such as **GPT**, applied to the development of cutting-edge, AI-powered solutions and intelligent automation.
- Very well-versed in designing **Database Management System (DBMS)** using both **SQL** and **NoSQL** databases.
- Good usage of **PL/SQL** for **stored procedures, functions and triggers**.
- Proficient in managing **JMS (Java Message Service)**, using **message queues** such as **Apache Kafka, ActiveMQ, and RabbitMQ** for ensuring seamless communication between applications.
- Experienced in developing robust J2EE applications with a strong focus on quality assurance, utilizing testing frameworks like **JUnit, Mockito, Selenium, and TestNG** to ensure reliability, maintainability, and adherence to enterprise standards.
- Proficient in front-end testing using **Karma, Jasmine and Mocha**, with expertise in **API automation** using **Cucumber**.
- Experienced in **API testing and validation** using tools like **Postman, SOAP UI, and Swagger UI** to ensure accurate, secure, and reliable communication between services.
- Experience with **cloud technologies** like **AWS, Google Cloud Platform, and Azure** for hosting and scaling microservices.
- Extensive use of various **AWS components** such as **EC2, S3, Lambda, CloudWatch, CloudFront, CloudFormation, ECS, EBS, Glacier, RDS, Elastic Cache, IAM, and DynamoDB**, aiming scalable and dependable cloud solution.
- Hands-on experience with containerization using **Docker** and **Kubernetes** for orchestrating microservices, ensuring high availability and scalability.
- Proficient in **CI/CD pipelines** using **Jenkins, GitLab CI, and Travis CI** to automate the build and deployment of microservices applications, minimizing deployment downtime.
- Skilled in drafting builds using **Maven, Gradle** and **Ant** to generate deployable artifacts from source code, ensuring consistent and automated build processes.
- Proficiency in coordinating **web application servers** like **Apache Tomcat, IBM WebSphere, JBoss** and **WebLogic**, aiming for deploying and managing enterprise applications.
- Expertise in maintaining java **code quality** using **SonarQube**, along with usage of tools like **Git** for **Version Control**, ensuring streamlined development processes.
- Expertise in Java-based logging using modules such as **Log4j**, for better debugging and monitoring.
- Proficient in **IDEs** such as **Spring Tool Suite, Eclipse, IntelliJ** and **NetBeans** for promising development workflows.
- Experience in **RUP** and **Agile** development (**TDD, BDD** and **SCRUM**) methodologies.
- **Problem-solving** minded and with **good communication** skills, producing a friendly work environment.

## TECHNICAL SKILLS

**Programming Languages:** Java 8/11/17/21, Python, SQL, JavaScript, C#, R, TypeScript.

**Front-end technologies:** ReactJS, Angular, Next.js, Bootstrap, GraphQL.

**Backend Technologies:** Spring Boot, Spring Cloud, Spring Batch, Hibernate, Spring MVC, JDBC, Flask, Django, PHP.

**Libraries:** NumPy, Pandas, Matplotlib, Node.js, Maven, Gradle.

**Web Services & API:** REST, SOAP, JSON, XML, JWT, API Gateway, Swagger/OpenAPI, WSDL, gRPC.

**Databases:** MySQL, Oracle, DB2, PostgreSQL, DynamoDB, MongoDB (NoSQL), Cassandra, Redis.

**Cloud & DevOps:** AWS (EC2, S3, Lambda, ECS, CloudFront, RDS), Azure, GCP, Docker, Kubernetes, Terraform.

**CI/CD & Version Control:** Jenkins, GitHub Actions, GitLab, Git, SVN, Bitbucket.

**Big Data technologies:** Snowflake, Hadoop, Hive, Spark, Azure Data Factory, Databricks.

**Testing & Monitoring tools:** JUnit, JMeter, Mockito, Selenium, JIRA, Splunk, TestNG, Postman, Prometheus, Grafana, Log4j.

**Agile & SDLC:** Scrum, TDD, BDD, Kanban.

**Operating Systems:** Linux, Unix, Windows.

## PROFESSIONAL EXPERIENCE

**Client:** Ally Bank, Detroit, MI

**Software Engineer**

**Aug 2023 - Present**

- Practicing **Agile methodology** throughout the development stages, resulting in time completion of user stories.
- Developed application features using **Java**, with the help of **Java Collections API** for managing data structure, annotations for code reusability and exceptions for handling errors.
- Led the integration of **micro services** using **Spring MVC, Spring AOP, Spring Boot, Spring Batch**, and **Spring Security** within existing system architectures, enabling the bank to improve system **scalability** and **reducing deployment time**.
- Designed and implemented **RESTful microservices** using **Node.js (Express)** and **Spring Boot**, while integrating frontend components with **ReactJS**, resulting in an **improvement in API performance**.
- Induced the application services with **Ally.ai** using **Generative AI** and **LLMs** for handling and analyzing large volumes of data points, resulting in better suggestions, decisions, user experience and demonstrated **34% time savings on certain tasks**.
- Achieved data retrieval with **ORM** using **Hibernate**, and **Spring JDBC**, with noticeable efficiency.
- Created **SOAP** using **JAX-WS** and **RESTful APIs** utilizing **XML, JSON**, and **Swagger/OpenAPI**, making integration between different systems clear and reliable.
- Implemented **API Gateway** solutions using **Apigee** and **AWS API Gateway**, handling **100K+ API requests per day**.
- Designed and facilitated secure authentication and **API** with **OAuth2** and **JWT**, improving login processes for users.
- Designed **responsive web** pages using **ReactJS, Bootstrap, HTML5, CSS3, TypeScript, jQuery, AJAX** and **JavaScript**, achieving improved user interface and **reduction in page load times**.
- Leveraged **AWS Components EC2, EBS, ECS, CloudWatch, CloudFront, Lambda, DynamoDB, IAM, S3, Elastic Cache**, to architect, deploy, and uphold scalable, secure, serverless and reliable cloud-based API solutions.
- Wrote **PL/SQL** code in Analysis, Design and Implementation of Business Applications using **Oracle**, resulting in reduced data retrieval time.
- Developed event-driven architecture using **JMS** such as **Apache Kafka**, achieving real-time throughput of **more than 1000 messages per second** per cluster, which is crucial in handling financial transactions.
- Implemented unit and integrated testing using frameworks like **JUnit** and **Mockito**, assuring **80% test coverage**.
- Implemented front-end testing using framework **Chai** and **Protractor** for end-to-end testing with complete assertions and testing resulting in efficient **test-driven development**.
- Administered API testing using tools like **Postman** and **SOAP UI**, resulting in better API responses and effective HTTP method testing.
- Initiated **CI/CD** pipelines using **Jenkins** and **Terraform**, reducing the time to deploy updates to production environments.
- The monitoring of production logs is done by **Kibana** and **Grafana** dashboards.
- Integrated **Dynatrace, Splunk**, and **Prometheus/Grafana** to monitor **real-time application performance, latency, and API response times**, reducing downtime.
- Administered code quality using **SonarQube** tool, to reproduce code with fewer bugs, increased readability and quality, achieving more than **80% test coverage** and lesser **duplicate code**.
- Deployed and orchestrated microservices using **Docker** and **Kubernetes**, ensuring rapid scalability and fault tolerance in production.
- Facilitated version control using **Git**, resulted in better maintenance of code integrity and team collaborations.
- Developed **build automation** of multi-module enterprise projects using **Maven**, outputting consistent and extensible artifacts.
- Integrated **WebLogic** with **Oracle databases** using connection pools, enhancing transactional efficiency and reducing query latency.
- Established **error logging** and **troubleshooting** using **Log4j**, resulting in **80% reduced issue resolution time**.
- Used **custom JIRA dashboards and filters** to monitor team velocity, sprint burndown, and blocker trends, supporting continuous improvement during retrospectives.

**Environment:** Java, Hibernate, Spring, Spring Boot, Spring JDBC, Spring MVC, AWS, Microservices, Gen AI, LLM, ReactJS, Node.js, TypeScript, JavaScript, HTML5, CSS3, Apigee, OAuth2, JWT, DynamoDB, Oracle, Apache Kafka, Docker, Kubernetes, JUnit, Mockito, Postman, SOAP UI, REST, Jenkins, Terraform, SonarQube, Log4j, Prometheus, Kibana, Grafana, Dynatrace, Splunk, Git, JIRA, Agile

**Client: Molina Healthcare, Long Beach, CA**

**Software Developer**

**Jan 2021 - Dec 2022**

- Worked in **Agile/Scrum** environment, with active participation in daily scrum meetings and deliveries, aligning requirement changes.
- Utilized **Java 11** for application development leveraging features like lambda expressions, classes, and database connectivity.
- Developed **RESTful** microservices with **Spring MVC**, **Spring Boot** and **Spring Cloud**, while implementing best design patterns for optimized development and managing **distributed systems**.
- Designed **RESTful APIs** using **Spring REST**, ensuring efficient communication between services.
- Developed Java based API integrations for **MMIS** and handling **EDI** transactions, for better processing Medicaid claims and verifying eligibility and utilized **Spring Security** to secure healthcare-related **APIs**, ensuring that sensitive patient data remain protected.
- Implemented **FHIR**-compliant **REST APIs** for real-time exchange of patient health records.
- Utilized **OAuth 2.0** and **JWT** for **authentication**, securing **RESTful** web services.
- Employed **Spring Data JPA**, for acquiring persistent data and improving data retrieval process.
- Designed interactive web pages using **HTML5**, **CSS3**, **Bootstrap** and **JavaScript**, for improved user experience.
- Built single page responsive applications using **Angular 9** with **Ivy rendering** and **differential loading** for optimized performance; implemented lazy loading, modular routing, reactive forms, and service-based state management.
- Leveraged **Angular 13/10** for form handling, DOM manipulation, event handling, and HTTP requests.
- Migrated and deployed applications to **Microsoft Azure**, utilizing services like **Azure Virtual Machines**, **Blob Storage**, and **Azure SQL Database**, to streamline deployment workflows, and storage management.
- Implemented **MongoDB** to manage over **1M+ patient records** with dynamic schema support, enabling real-time access and 40% faster data retrieval. Integrated **FHIR/HL7** standards and ensured **HIPAA**-compliant storage and interoperability across healthcare systems.
- Utilized **Azure Data Factory** and **Databricks** for processing large-scale healthcare data, including claims, EDI transactions, and MMIS records, supporting timely insights and analytics.
- Configured **RedHat 3scale API Gateway** to manage and secure healthcare API traffic, implementing policies and access controls to ensure **HIPAA** compliance—resulting in a **40% improvement in API response time** and a **60% reduction in unauthorized access attempts**.
- Utilized **ActiveMQ** for **asynchronous** communication between services, and **RabbitMQ** to handle lightweight and multiple protocols for monitoring patients' data and EMRs for real-time updates, resulting in handling **1M+ messages** per second, and reduced latency in patient monitoring dashboards.
- Developed unit testing using **JUnit** to maintain a **Test-Driven Development** and **JMeter** for performance testing, handling up to **10K** virtual users in distributed mode.
- Employed **Selenium** for performing end-to-end **UI automation testing**, reducing manual test efforts.
- Designed and maintained **Swagger/OpenAPI** specifications for **RESTful APIs**, achieving **100%** endpoint documentation coverage and enabling **automated testing and validation**, which reduced integration issues and improved onboarding time for new developers.
- Integrated **Gradle** with **Jenkins CI** pipelines to automate builds and run tests upon code check-ins, improving deployment efficiency and reducing manual intervention.
- Collaborated via platforms like **GitHub**, **GitLab**, and **Bitbucket**, conducting **code reviews** and implementing peer feedback to maintain code quality and consistency.
- Achieved and maintained **code quality** across services by regularly reviewing **SonarQube** reports and collaborating with QA and dev teams to address gaps.
- Worked on system monitoring and logging using **Prometheus**, **Grafana**, and **ELK Stack** for better visibility of healthcare applications, and reducing critical issue resolution time.
- Tuned JVM settings and thread pools in **Apache Tomcat** to support **high-concurrency user requests** and reduce memory footprint.
- Configured **log4j.properties** and **log4j.xml** files to manage logging levels (INFO, DEBUG, ERROR), appenders (console, file, rolling file), and log patterns for MMIS workflows and EDI transaction services.

**Environment:** Java 11, Spring MVC, Spring Boot, Spring Cloud, Spring REST, Spring Security, OAuth 2.0, JWT, Spring Data JPA, Angular 9/10/13, HTML5, CSS3, Bootstrap, JavaScript, Microsoft Azure, Blob storage, Azure SQL Database, MongoDB, Data Factory, Databricks, RedHat 3scale API Gateway, ActiveMQ, RabbitMQ, Junit, JMeter, Selenium, Swagger/OpenAPI, Jenkins, GitHub, GitLab, Bitbucket, Prometheus, SonarQube, Grafana, ELK Stack, Agile, Scrum

**Client: eBay, Bangalore, India**

**Software Developer**

**Jan 2019 – Dec 2020**

- Participated in **Agile sprint** planning and delivered features on time, **improving delivery timelines by 20%**.
- Developed microservices using **Spring Boot** and **Java 8** for eBay's product listing and auction management systems.
- Engineered scalable and responsive **Angular** applications integrated with **Spring Boot RESTful APIs**, improving frontend-backend communication **efficiency by 60%**, enabling seamless product retrieval, auction updates, and user transactions.
- Utilized **Hibernate** and **JPA** for **Object-Relational Mapping**, ensuring seamless interaction between Java objects and relational database schemas for eBay's product listing and auction services.
- Designed and consumed **SOAP-based web services** using **WSDL** and **XML schemas (XSD)** for enabling secure communication between product management and third-party auction modules.

- Applied **Angular's reactive forms** and validation strategies to handle complex multi-step user workflows such as listing a product or placing a bid.
- Enhanced page performance with **lazy loading, AOT**, and custom change detection strategies, resulting in a decreased loading times.
- Use of **AJAX**, to achieve asynchronized communication between web client and server.
- Developed **dynamic and reactive forms** with advanced custom validation logic, streamlining data entry workflows and reducing form-related errors.
- Designed a hybrid data architecture using **MySQL** for structured auction data and **Cassandra** for high-velocity bidding logs and user interaction tracking, handling over **2 million records/day**.
- Developed optimized **SQL queries, stored procedures, and functions** to handle high-volume transactional operations, improving query performance.
- Implemented data versioning and rollback strategies using **transactional support** in MySQL for auction and product update services.
- Leveraged Cassandra's **multi-node replication and partitioning**, improving fault tolerance and ensuring **99.99% uptime** of auction tracking services.
- Deployed full-stack **Java** and **Angular** applications using **EC2, S3**, and **CloudFront**, ensuring high availability and scalability.
- Utilized **AWS Lambda** with **API Gateway** to create **serverless APIs**, reducing server maintenance and operational costs.
- Managed application secrets and environment configurations using **AWS Systems Manager Parameter Store** and **Secrets Manager**.
- Integrated **CloudWatch Logs, Metrics, and Alarms** for real-time application monitoring, **improving incident response times by 40%**.
- Used **AWS CloudFormation** and **YAML** templates to provision and manage infrastructure as code, ensuring reproducibility across environments.
- Implemented **Elastic Load Balancers (ELB)** and **Auto Scaling** Groups for distributed backend services, handling high traffic efficiently.
- Developed **unit and integration tests** using **Jasmine, Karma**, and **Protractor** for **Angular**, alongside **JUnit** and **Mockito** for testing backend services, **achieving 85%+ test coverage**.
- Implemented **JWT** and **OAuth2** in **Spring Security** to ensure secure access to eBay's APIs.
- Designed and implemented an event-driven architecture using **Apache Kafka** for asynchronous processing of transactions.
- Worked on containerizing **microservices** using **Docker** and deploying them in a **Kubernetes** environment for scalability.
- Used **SVN** for managing source code versions, tracking changes, and maintaining project history across multiple development teams.
- Integrated **Apache Ant** with **CI/CD tools like Jenkins**, enabling automated builds and deployments in development, staging, and production environments, resulting in reduced **downtime** during deployments.
- Implemented robust logging and monitoring solutions using **Prometheus, Grafana**, and **ELK Stack**.
- Used **IBM WebSphere Application Server (WAS)** to support enterprise-grade backend components including EJBs and JMS integration, ensuring reliable auction data flow across distributed systems.
- Integrated **SLF4J** with **Logback** for consistent logging across eBay's **Spring Boot** and **Java EE** services, routed logs to VMware **Log Insight** for real-time analysis and alerting, and used **MDC** to trace actions across microservices, **reducing debugging time by 35%**.

**Environment:** Java 8, Spring Boot, Hibernate, JPA, Angular, SOAP, AJAX, MySQL, Cassandra, AWS Lambda, AWS API Gateway, CloudFormation, YAML, CloudWatch, ELB, Jasmine, Karma, Protractor, Junit, Mockito, JWT, OAuth2, Apache Kafka, Docker, Kubernetes, SVN, Ant, WebSphere, SLF4j, Log Insight, Agile.

## EDUCATION

**Southern Arkansas University, Magnolia, AR**  
**Masters in computer and information sciences**

**Grade: 4.0**

Related courses: Data structures, Algorithms, Database Management, Data Mining and Visualization, Machine Learning.
