SUMMARY

Master's student in Computer Science specializing in Software Engineering, with expertise in **cloud computing, data engineering, machine learning, and full-stack development**. Proficient in designing **scalable data pipelines, cloud-based architectures, big data processing, and optimizing SQL/NoSQL databases**.

- ✓ Strong technical skills in **Python, Java, SQL, R, and cloud platforms like AWS and Azure**. Experienced in integrating **REST APIs, deploying machine learning models, and implementing secure data governance strategies**.
- ✓ Possesses a deep understanding of **distributed computing, ETL workflows, and real-time data analytics**. Adept at **automating data ingestion, processing massive datasets, and ensuring data security in cloud environments**.
- ✓ Passionate about solving **complex data engineering challenges, optimizing system performance, and building high-performance applications**.
- ✓ Demonstrated ability to work in **agile environments, collaborating with cross-functional teams to deliver data-driven solutions that enhance business intelligence and operational efficiency**.

TECHNICAL SKILLS

- **Cloud & Certifications:** Microsoft Azure Fundamentals, AWS Academy Cloud Foundations
- **Programming & Data Engineering:** Python, Java, C, SQL, R, Kotlin
- **Data & ML Tools:** TensorFlow, Scikit-learn, PostgreSQL, MySQL, Hadoop, Spark, Snowflake
- **Web & API Development:** HTML, CSS, JavaScript, React.js, Flask, Django, REST API
- **Big Data & Processing:** Apache Spark, Kafka, Airflow, Data Lakes, Data Warehouses
- **Operating Systems:** Windows, Windows Server, Linux, iOS, Android, ChromeOS

EDUCATION

Master of Science in Computer Science (Software Engineering) | Lewis University, IL | *May 2025* | GPA: 3.4/4.0

Bachelor of Business Administration (Aviation Management) | Andhra Loyola College, India | *August 2021* | GPA: 3.44/4.0

PROJECTS & RESEARCH

Customer Sentiment Analysis for Airline Service Quality

- Developed a **machine learning-powered sentiment analysis system**, leveraging **BERT and LSTM models** to classify **passenger feedback from multiple sources** for improved **airline service quality assessment and optimization**.
- Designed a **real-time sentiment analytics dashboard** using **Flask, React.js, and PostgreSQL**, providing **predictive insights, sentiment trends, and customer experience metrics** to enhance **business decision-making strategies**.

EXPERIENCE

ETL Developer & Production Support | Prudential Goliath GI, DECS (Data Exchange Connectivity Service) | *June 2021 – July 2023*

- Developed and maintained API-based **real-time/near real-time integration platform (DECS)** using DataStage 11.7.1, Oracle 12c, JIRA, and Autosys, replacing traditional data file exchange for processes like eligibility checks, claims, and billing.
- Designed and executed ETL jobs for processing **UPS data**, creating parallel jobs to extract, transform, and load data into data warehouses and data marts, handling large data loads with automated error handling.
- Created low-level documentation for **data flow architecture** and **source-to-target mappings**, contributing to data warehouse architecture strategies.
- Executed weekly & monthly **maintenance jobs**, optimized **job sequences using conditional/unconditional triggers** (Job Activity, Sequencer, Routine Activity, Unix commands) & generated weekly compare reports to enhance **DS job performance**.
- Collaborated with business analysts to gather functional requirements, prepared design, and data mapping documents, and resolved DS-related and operational issues to support customer data loading requests.
- Worked with DB2 UDB, SQL Server, and flat files for data staging, tested **ETL jobs** in development environments, and deployed jobs to production servers.
