Summary

Senior Data Analyst/Engineer with 7+ years of experience in building scalable ETL pipelines, predictive models, and dashboards. Proficient in SQL, Python, Power BI, AWS & Azure, AI/ML, LLMs using OpenAI.

Education

University of Alabama

Masters in Data Science

Birmingham, AL

Aug. 2019 – May 2021

University of Pune

Bachelor of Computer Engineering

Pune, India

Aug. 2015 – June 2019

Certifications

AWS Cloud Practitioner, Tableau Analyst, Using Python for Research (Harvard), Machine Learning with Python (IBM)

Experience

Data Engineer

June 2022 – July 2025

S&S Truck Parts

Boston, MA

- Led development of a machine learning model to optimize product pricing, driving Millions in cost savings by transitioning outsourced production in-house. Developed and deployed a large language model (LLM) using Hugging Face, OpenAI API, and TensorFlow to enhance predictive capabilities.
- Architected ETL pipelines for capacity planning, data collection, and preprocessing. Produced comprehensive reports with Python libraries like NumPy and Matplotlib.
- Led full-cycle data projects from SQL design to Power BI dashboards, enhancing decision-making by 40%. Optimized data workflows and security, cutting processing time by 30%.

Data Analyst

March 2022 – June 2022

Epitex

Birmingham, AL

- Oversaw report requirement gathering and data analysis using PostgreSQL, integrating ML-based forecasting models to enhance insights. Created Power BI reports that improved report accuracy by 40% and reduced generation time by 30%.
- Designed dynamic Tableau dashboards that visualized both historical and predictive trends using machine learning outputs, resulting in a 25% improvement in decision-making efficiency.
- Leveraged Excel sheets, flat files, and CSV files to generate Tableau ad hoc reports, streamlining data analysis processes and improving report turnaround time.

Technology Analyst

Sept 2021 – March 2022

UBS

Birmingham, AL

- Created linkages across business data sources within BI platforms to enable machine learning-based predictive modeling and advanced trend analysis.
- Developed KPI measures and tracked sales performance. Collaborated with other departments to reduce expenses by 30% through strategic data analysis.
- Built forecasting models for daily to monthly operations, ensuring data quality with SQL and Excel, and visualized key trends using Tableau dashboards.

Data Engineer

Aug 2015 - July 2018

D.P Synthetics

Gujarat, India

- Designed and deployed custom ETL scripts using Python and SQL to streamline raw data ingestion from multiple sources, cutting processing time, and significantly improving data accuracy.
- Translated complex business questions into SQL-driven analyses and automated dashboards, uncovering key performance trends that directly influenced a 15% increase in revenue through targeted strategy adjustments.

Technical Skills

Methodologies: SSDLC, Agile DevOps, Waterfall

Data Warehouse: AWS Redshift, S3, Glue, Kinesis, Lambda, IAM, Snowflake, Databricks, Airflow, Azure Data Factory

Programming Languages: Python (NumPy, Pandas, Matplotlib, SciPy, PySpark), R, SQL, NoSQL, JavaScript, React.

Tools: Tableau, Power BI, Looker, Apache Kafka, Docker, git, TFS, Jira, Jupyter Notebook, PyCharm, SSIS, SSRS

AI Tools & Frameworks: TensorFlow, PyTorch, Scikit-learn, XGBoost, OpenAI API, Cursor AI Editor
