

EDUCATION

Montclair State University

Jan 2023 - May 2024

M.S., Business Analytics 3.6/4.00 GPA

- **Coursework:** Data Visualization, Python, Advanced Database Management, Statistical Analysis, Big data management

Vardhaman College of Engineering

B.S., Computer Science and Engineering

SKILLS

Languages: Python, R, SQL, Java, JavaScript, HTML5, CSS

Libraries/Frameworks: Pandas, NumPy, scikit-learn, Matplotlib, Seaborn, Plotly, TensorFlow, PyTorch, Keras

Data Techniques/Tools: Tableau, Power BI, PowerPoint, Snowflake, Splunk, MS Excel, Data Analytics, Data Visualisation, Statistical Analysis, Data Warehousing, Data Modelling, Big query, Exploratory data analysis, Extract, Transform, Load (ETL), Time Series, Machine Learning, NLP, predictive analysis, NLP

BI/Visualization: Power BI, Tableau, Excel (Advanced), PowerPoint

Data & Analytics: EDA, Statistical Analysis, Forecasting, ML, NLP, Predictive Analytics

ETL/Engineering: Snowflake, Splunk, PySpark, BigQuery, Data Modeling, Warehousing, ETL

Big Data: Hadoop, Spark, Kafka, Airflow

Databases: MySQL, PostgreSQL, SQL Server, Oracle, Cloudera Impala, MongoDB

WORK HISTORY

Bergen New Bridge Medical Center

Oct 2023 - May 2024

Analytics Practicum Intern

Paramus, NJ

- Conducted a comprehensive healthcare clinical documentation analysis using text mining tools (NLTK, SpaCy) and natural language processing (NLP) techniques to evaluate and maintain organizational standards across 30,000+ annual documents.
- Led User Acceptance Testing (UAT) for the BNBC Project, ensuring the system's functionality met all business requirements and stakeholder expectations.
- Developed FHIR-based APIs to enable modern interoperability and seamless integration between Electronic Health Records (EHR) and third-party applications.
- Implemented systematic methodologies using Python and R for high-volume document processing, establishing quality metrics and compliance indicators that improved documentation.
- Created an advanced keyword identification framework aligned with healthcare best practices, leveraging analytics tools (Tableau, Power BI) to enhance documentation accuracy and standardization.

Vistex ,India

Jun 2021 - Dec 2022

- Analyzed and debugged ABAP programs using SAP Workbench tools (SE80, SE37, SE11), successfully resolving technical issues and enhancing system stability.
- Developed and maintained multiple ALV reports with interactive features (filters, sorting, aggregations) using ALV Grid and Tree controls to meet business reporting requirements.
- Modified existing ABAP reports focusing on performance optimization through SQL query improvements and code restructuring for efficient data processing.
- Created and maintained Z-tables, structures, and data elements using ABAP Dictionary (SE11), ensuring data integrity and proper system.
- Implemented error handling and logging mechanisms in ABAP programs, enabling proactive issue identification and resolution.
- Collaborated with basis team for transport management, ensuring smooth deployment of developments across systems (DEV, QA, PRD).
- Maintained coding standards and documentation for custom programs, facilitating knowledge transfer and system maintainability

PROJECTS

Covid Cases Trends

Jan 2023 - May 2023

- Conducted in-depth analysis of global Covid-19 trends using Tableau, creating insightful visualizations.
- Developed interactive dashboards to present pandemic insights, guiding public health policies.
- Recognized vaccination rates as crucial predictors of Covid-19 outcomes, highlighting lower cases and deaths in highly vaccinated

Classification Model Analysis

Aug 2023 - Dec 2023

- Led development of sentiment analysis models for Amazon automotive reviews, achieving high accuracy through LSTM, Multinomial Naive Bayes, and Decision Tree models.
- Addressed dataset imbalances and overfitting, enhancing insights into customer satisfaction for automotive products.

Statistical Model Analysis

Jan 2024 - May 2024

- Directed thorough statistical analysis of college admission data, employing regression modeling and logistic regression to uncover SAT score determinants and admission probabilities.
- Formulated predictive models to inform policy decisions, fostering fair access to higher education.
- Applied diverse statistical techniques, including Z-tests and ANOVA, to align academic performance with admissions outcomes.
